Form 10-K

(X) ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES
EXCHANGE ACT OF 1934
For the Fiscal Year Ended December 31, 2011

or

() TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES
EXCHANGE ACT OF 1934

Commission File Number 1-16463

Peabody Energy Corporation

(Exact name of registrant as specified in its charter)

Delaware

(State or other jurisdiction of incorporation or
organization)

701 Market Street, St. Louis, Missouri

(Address of principal executive offices)

(314) 342-3400

Registrant's telephone number, including area code

Securities Registered Pursuant to Section 12(b) of the Act:

Title of Each Class

Common Stock, par value \$0.01 per share

Preferred Share Purchase Rights

Securities Registered Pursuant to Section 12(g) of the Act:

None

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes (X) No ()

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes () No (X)

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports) and (2) has been subject to such filing requirements for the past 90 days. Yes (X) No ()

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§ 232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes (X) No ()

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K (§ 229.405 of this chapter) is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K. ()

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of "large accelerated filer," "accelerated filer" and "smaller reporting

Edgar Filing: PEABODY ENERGY CORP - Form 10-K

company” in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer (☒) Accelerated filer (☐) Non-accelerated filer (☐) Smaller reporting company (☐)

(Do not check if a smaller reporting company)

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes (☐) No (☒)

Aggregate market value of the voting stock held by non-affiliates (shareholders who are not directors or executive officers) of the Registrant, calculated using the closing price on June 30, 2011: Common Stock, par value \$0.01 per share, \$15.9 billion.

Number of shares outstanding of each of the Registrant’s classes of Common Stock, as of February 17, 2012: Common Stock, par value \$0.01 per share, 272,259,729 shares outstanding.

DOCUMENTS INCORPORATED BY REFERENCE

Portions of the Company’s Proxy Statement to be filed with the Securities and Exchange Commission in connection with the Company’s 2012 Annual Meeting of Shareholders (the Company’s 2012 Proxy Statement) are incorporated by reference into Part III hereof. Other documents incorporated by reference in this report are listed in the Exhibit Index of this Form 10-K.

Table of Contents

CAUTIONARY NOTICE REGARDING FORWARD-LOOKING STATEMENTS

This report includes statements of our expectations, intentions, plans and beliefs that constitute “forward-looking statements” within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934 and are intended to come within the safe harbor protection provided by those sections. These statements relate to future events or our future financial performance, including, without limitation, the section captioned “Outlook” in Management’s Discussion and Analysis of Financial Condition and Results of Operations. We use words such as “anticipate,” “believe,” “expect,” “may,” “project,” “should,” “estimate,” or “plan” or other similar words to forward-looking statements.

Without limiting the foregoing, all statements relating to our future operating results, anticipated capital expenditures, future cash flows and borrowings, and sources of funding are forward-looking statements and speak only as of the date of this report. These forward-looking statements are based on numerous assumptions that we believe are reasonable, but are subject to a wide range of uncertainties and business risks and actual results may differ materially from those discussed in these statements. Among the factors that could cause actual results to differ materially are:

- global demand for coal, including the seaborne thermal and metallurgical coal markets;
- price volatility, particularly in higher-margin products and in our trading and brokerage businesses;
- impact of alternative energy sources, including natural gas and renewables;
- impact of weather and natural disasters on demand, production and transportation;
- reductions and/or deferrals of purchases by major customers and ability to renew sales contracts;
- credit and performance risks associated with customers, suppliers, contract miners, co-shippers, and trading, banks and other financial counterparties;
- geologic, equipment, permitting and operational risks related to mining;
- transportation availability, performance and costs;
- availability, timing of delivery and costs of key supplies, capital equipment or commodities such as diesel fuel, steel, explosives and tires;
- integration of the newly acquired Macarthur Coal Limited (Macarthur) operations;
- successful implementation of business strategies;
- negotiation of labor contracts, employee relations and workforce availability;
- changes in postretirement benefit and pension obligations and their related funding requirements;
- replacement and development of coal reserves;
- availability, access to and the related cost of capital and financial markets;
- effects of changes in interest rates and currency exchange rates (primarily the Australian dollar);
- effects of acquisitions or divestitures;
- economic strength and political stability of countries in which we have operations or serve customers;
- legislation, regulations and court decisions or other government actions, including new environmental and mine safety requirements, changes in income tax regulations or other regulatory taxes;
- litigation, including claims not yet asserted;
- terrorist attacks or threats;
- impacts of pandemic illnesses; and
- other factors, including those discussed in Legal Proceedings, set forth in Item 3 of this report and Risk Factors, set forth in Item 1A of this report.

When considering these forward-looking statements, you should keep in mind the cautionary statements in this document and in our other Securities and Exchange Commission (SEC) filings. These forward-looking statements speak only as of the date on which such statements were made, and we undertake no obligation to update these statements except as required by the federal securities laws.

Note: The words “we,” “our,” “Peabody” or “the Company” as used in this report, refer to Peabody Energy Corporation or its applicable subsidiary or subsidiaries. Unless otherwise noted herein, disclosures in this Annual Report on Form 10-K relate only to our continuing operations.

PART I

Item 1. Business.

History and Development of Business

Peabody Energy Corporation is the world’s largest private-sector coal company. We own interests in 30 coal mining operations, including a majority interest in 29 coal operations located in the United States (U.S.) and Australia and a 50% equity interest in the Middlemount Mine in Australia. We also own an equity interest in a joint venture mining operation in Venezuela. In addition to our mining operations, we market, broker and trade coal through our Trading and Brokerage segment.

We were incorporated in Delaware in 1998 and became a public company in 2001. Our history in the coal mining business dates back to 1883. Over the past decade, we have made strategic acquisitions and divestitures to position our company to serve the highest demand coal markets. Acquisitions and divestitures of note include the following.

In 2006, we expanded our presence in Australia with the acquisition of Excel Coal Limited.

In 2007, we spun off Patriot Coal Corporation (Patriot) through a dividend of all outstanding shares, which included mines in West Virginia and Kentucky.

In 2011, we acquired Macarthur, an independent coal company in Australia, which included two operating mines, a 50% equity-affiliate joint venture arrangement and several development projects, along with coal reserves of approximately 213 million tons (approximately 142 million tons on an attributable basis).

In 2011, we continued advancing multiple organic growth projects in Australia and the U.S. that involved future mines, as well as the expansion and extension of existing mines. In 2012 and the near term, our plans for our mining operations include further investments in organic growth projects. In the U.S., development work is expected to begin on our new Gateway North Mine in Illinois and the new Twentymile Sage Creek portal that will serve as an extension of our Twentymile Mine in Colorado. In Australia, we will continue advancing multiple projects that are expected to increase our seaborne coal volumes over the next few years. We also plan to convert our Wilpinjong and Millennium mines in Australia from contract mining to owner-operated mines. In addition, the integration of Macarthur into our Australian operations will continue as we seek to realize synergies through blending, sales and marketing, administrative costs, purchasing, infrastructure and capital project development. We also plan to accelerate development of the new Codrilla Mine, a legacy Macarthur project, which is expected to produce first coal in late 2013.

Other future plans include the continued expansion of our global trading and brokerage platform, which will include the additional sourcing of coal of third-parties from offtake arrangements and joint venture arrangements. We will also continue to explore opportunities to expand our presence in the Asia-Pacific region, such as through partnerships with other companies to utilize our mining experience for joint mine development.

Our core strategies to achieve growth are:

- 1) Executing the basics of best-in-class safety, operations and marketing;
- 2) Capitalizing on organic growth opportunities; and
- 3) Expanding in high-growth global markets.

We are also participating in new generation and Btu Conversion technologies designed to expand the uses of coal technologies, including carbon capture and storage.

Table of Contents

Segments

Our operations consist of four principal segments: our three mining segments and our Trading and Brokerage segment. Our three mining segments are Western U.S. Mining, Midwestern U.S. Mining and Australian Mining. Our fifth segment, Corporate and Other, includes mining and export/transportation joint ventures, energy-related commercial activities as well as the management of our coal reserve and real estate holdings.

Our Western U.S. Mining operations consist of our Powder River Basin, Southwest and Colorado mines. The mines in that segment are characterized by predominantly surface mining extraction processes and coal with a lower sulfur content and Btu. In addition, the customer transportation costs are generally higher due to longer shipping distances. Our Midwestern U.S. Mining operations include our mines in Illinois and Indiana, which are characterized by a mix of surface and underground mining extraction processes and coal with a higher sulfur content and Btu. In addition, the customer transportation costs are generally lower due to shorter shipping distances. The principal business of our U.S. mining operations is the sale of thermal (steam) coal, sold primarily to electric utilities in the U.S. with a portion sold into the seaborne markets.

Our Australian Mining operations consist of our mines in Queensland and New South Wales, Australia. The mines in that segment are characterized by both surface and underground extraction processes, mining various qualities of metallurgical (low-sulfur, high Btu coal) and thermal coal. The metallurgical coal qualities include hard coking coal, semi-hard coking coal, semi-soft coal and pulverized coal injection (PCI) coal. PCI coal is generally used by steel producers as a replacement for coke made from coking coal. Our recent acquisition of Macarthur increased our proven and probable reserves, which included low volatile PCI (LV PCI) coal, coking coal and thermal coal. Our Australian Mining operations are primarily export focused with customers spread across several countries, while a portion of our coal is sold to Australian steel producers and power generators. Generally, revenues from individual countries vary year by year based on the demand for electricity, the demand for steel, the strength of the global economy and several other factors including those specific to each country.

Financial information regarding our operating segments is contained in Note 25 to our consolidated financial statements.

Mining Segments

The maps that follow display our mine locations as of December 31, 2011, excluding mines held for sale. Also noted are the primary ports utilized in the U.S. and in Australia for our coal exports and our corporate headquarters.

U.S. Mining Operations

		P	Pulverized Coal Injection

- (1) Represents mines that have non-controlling ownership interests.
- (2) "Other" in Midwestern U.S. Mining primarily consists of purchased coal used to satisfy certain coal supply agreements.
- (3) We own a 73.3% undivided interest in an unincorporated joint venture that owns the Coppabella and Moorvale mines. Tons sold is for the period from the date of the acquisition (October 26, 2011) to December 31, 2011.
- (4) We own a 50.0% equity interest in Middlemount Coal Pty Ltd., which owns the Middlemount Mine in Queensland, Australia that was acquired as part of the Macarthur acquisition.

Table of Contents

We also own a 48.37% interest in Carbones del Guasare S.A., which operates the Paso Diablo Mine, a surface operation in northwestern Venezuela that produces thermal coal.

See Item 2. “Properties” for additional information regarding coal reserves, coal characteristics and tons produced for each mine.

Trading and Brokerage Segment

We have a global coal trading and brokerage platform with trading and business offices in China, Australia, the United Kingdom, Singapore, Indonesia, Germany and the U.S. Through our Trading and Brokerage segment, we engage in the brokering of coal sales both as principal and agent in support of various coal production-related activities that may involve coal to be produced from our mines, coal sourcing arrangements with third-party mining companies or offtake agreements with producers. We also engage in the trading of coal, freight and freight-related contracts. We also provide transportation-related services in support of our coal trading strategy, as well as hedging activities in support of our mining operations.

Corporate and Other Segment

Our Corporate and Other Segment includes selling and administrative items, activity associated with our joint ventures, resource management activity, past mining obligations and our other commercial activities such as generation development and Btu Conversion development costs.

Resource Management. We hold approximately 9.0 billion tons of proven and probable coal reserves and more than 500,000 acres of surface property. We have an ongoing asset optimization program where our resource development group regularly reviews these reserves for opportunities to generate earnings and cash flow through the sale of non-strategic coal reserves and surface land. In addition, we generate revenue through royalties from coal reserves and oil and gas rights leased to third parties and farm income from surface land under third-party contracts.

Export Facilities. We have an interest in a coal export terminal in Newport News, Virginia that exports both metallurgical and thermal coal primarily to European and Brazilian markets.

Generation Development. We are a 5.06% owner in the Prairie State Energy Campus (Prairie State), a 1,600 megawatt coal-fueled electricity generation project. We are responsible for our 5.06% share of costs and marketing and selling of our share of electricity generated by the facility. The first unit began operations in 2011 and the second unit is expected to commence operations in 2012.

Btu Conversion. Btu Conversion involves projects designed to expand the uses of coal through coal-to-liquids (CTL) and coal gasification technologies. We own an equity interest in GreatPoint Energy, Inc., which is commercializing its coal-to-pipeline quality natural gas technology. We also are pursuing a project with the government of Inner Mongolia and other Chinese partners to explore development opportunities for a large surface mine and downstream coal gasification facility that would produce methanol, chemicals or fuel products.

Clean Coal Technology. We continue to support clean coal technology development and other “green coal” initiatives seeking to reduce global atmospheric levels of carbon dioxide and other emissions. We are the only non-Chinese equity partner in GreenGen, which is constructing a near-zero emissions coal-fueled power plant with carbon capture and storage (CCS) near Tianjin, China and is expected to begin operations during 2012. In Australia, we have an ongoing commitment to the Australian COAL21 Fund designed to support clean coal technology demonstration projects and research in Australia.

We are also a founding member of the Global Carbon Capture and Storage Institute, an international initiative to accelerate commercialization of CCS technologies through development of 20 integrated, industrial-scale demonstration projects, as well as a participant in the Power Systems Development Facility, the PowerTree Carbon Company LLC, the Midwest Geopolitical Sequestration Consortium, the Asia-Pacific Partnership for Clean Development and Climate, the U.S.-China Energy Cooperation Program, the Consortium for Clean Coal Utilization, the National Carbon Capture Center and the Western Kentucky Carbon Storage Foundation.

Table of Contents

Mongolia Joint Venture. We own a 50% interest in Peabody-Winsway Resources B.V., a joint venture agreement with Winsway Coking Coal Holding Ltd. (Winsway), a Hong Kong stock exchange listed company. The joint venture is in the development stage and plans to ship metallurgical and thermal coal to Asian markets once developed. In 2011, we acquired a 5.1% equity interest in Winsway further strengthening the strategic partnership between the two companies.

Paso Diablo Mine. We own a 48.37% interest in Carbones del Guasare S.A., which operates the Paso Diablo Mine, a surface operation in northwestern Venezuela that produces thermal coal for export primarily to the U.S. and Europe. We are responsible for marketing our pro-rata share of sales from Paso Diablo; the joint venture is responsible for production, processing and transportation of coal to ocean-going vessels for delivery to customers.

Middlemount Mine. Through the acquisition of Macarthur, we own a 50% interest in the Middlemount Mine. The mine development was completed in late 2011 and test coal shipments to customers are ongoing. The mine is expected to reach full production in 2012.

Captive Insurance Entity. A portion of our insurance risks associated with workers' compensation, general liability and auto liability coverage is self-insured through a wholly-owned captive insurance company. The captive entity invoices certain of our subsidiaries for the premiums on these policies, pays the related claims, maintains reserves for anticipated losses and invests funds to pay future claims.

Coal Supply Agreements

Our coal supply agreements are primarily with electricity generators, industrial facilities and steel manufacturers. Most of our sales (excluding trading transactions) are made under long-term coal supply agreements (those with terms longer than one year). Sales under such agreements comprised approximately 91%, 91% and 93% of our worldwide sales (by volume) for the years ended December 31, 2011, 2010 and 2009, respectively.

For the year ended December 31, 2011, we derived 23% of our total coal sales revenues from our five largest customers. Those five customers were supplied primarily from 24 coal supply agreements (excluding trading transactions) expiring at various times from 2012 to 2025. The contract contributing the greatest amount of annual revenue in 2011 was approximately \$311 million, or approximately 4% of our 2011 total revenue base and is due to expire in 2019.

Our sales backlog includes coal supply agreements subject to price reopener and/or extension provisions. As of January 31, 2012 and 2011, we had a sales backlog of over 1 billion tons of coal. Contracts in backlog have remaining terms ranging from one to 16 years, representing over four years of production based on our 2011 production of 227.5 million tons. As of January 31, 2012, approximately 78% of our backlog is expected to be filled beyond one year.

U.S. We expect to continue selling a significant portion of our coal under long-term supply agreements. Customers continue to pursue long-term sales agreements as the importance of reliability, service and predictable prices are recognized. The terms of coal supply agreements result from competitive bidding and extensive negotiations with customers. Consequently, the terms of these agreements vary significantly in many respects, including price adjustment features, price reopener terms, coal quality requirements, quantity parameters, permitted sources of supply, treatment of environmental constraints, extension options, force majeure and termination and assignment provisions. Our strategy is to selectively renew, or enter into new, long-term supply agreements when we can do so at prices we believe are favorable.

Australia. Revenue from our Australian Mining segment represented approximately 39%, 36% and 26% of our total revenue base for the years ended December 31, 2011, 2010 and 2009, respectively. Our Australian coal mining activities accounted for 11%, 12% and 9% of our mining operations sales volume in 2011, 2010 and 2009, respectively. Production is sold primarily into the export metallurgical and thermal markets. Historically, we predominately entered into multi-year international coal agreements that contained provisions allowing either party to commence a renegotiation of the agreement price annually in the second quarter of each year. Current industry practice, and our practice, is to negotiate pricing for metallurgical coal contracts quarterly and seaborne thermal coal contracts annually.

Table of Contents

Transportation

Coal consumed in the U.S. is usually sold at the mine with transportation costs borne by the purchaser. Australian and U.S. export coal is usually sold at the loading port, with purchasers paying ocean freight. Producers usually pay shipping costs from the mine to the port, including any demurrage costs (fees paid to third-party shipping companies for loading time that exceeded the stipulated time). Demurrage continues to be part of the shipping costs for our Australian exports as certain ports continue to experience vessel queues due to factors such as lower than expected rail performance, supply constraints, adverse weather and delays in coal availability from time-to-time with those with whom we share vessels (co-shippers).

We believe we have good relationships with U.S. and Australian rail carriers and barge companies due, in part, to our modern coal-loading facilities and the experience of our transportation coordinators. See the table on page 5 for transportation methods by mine.

Our primary ports used for U.S. exports are the Dominion Terminal Associates coal terminal in Newport News, Virginia, the United Bulk Terminal near New Orleans, Louisiana and the Kinder Morgan terminal near Houston, Texas. Our U.S. mining operations exported approximately 3%, 1% and 1% of its tons sold for the years ended December 31, 2011, 2010 and 2009, respectively.

In Australia, we own interests in three east coast coal export terminals that are primarily funded through take-or-pay arrangements (see "Liquidity and Capital Resources" for additional information). In Queensland, seaborne metallurgical and thermal coal from our mines, including the Coppabella and Moorvale mines added with the acquisition of Macarthur, is exported through the Dalrymple Bay Coal Terminal. Our joint venture Middlemount Mine is ramping up operations with shipments sent through both Dalrymple Bay Coal Terminal and the Abbot Point Coal Terminal in Queensland, Australia. In New South Wales, our primary ports for exporting metallurgical and thermal coal are at Port Kembla and Newcastle, which includes both the Port Waratah Coal Services terminal and the terminal operated by Newcastle Coal Infrastructure Group (NCIG) that opened in 2010. Our Australian mining operations sold approximately 74%, 71% and 69% of its tons into the seaborne coal markets for the years ended December 31, 2011, 2010 and 2009.

We are also currently pursuing a U.S. west coast port facility that will allow us to export Powder River Basin coal to Asian markets. In Australia, we are exploring potential participation in the development of the Wiggins Island Coal Export Terminal at Gladstone, Queensland, as well as proposed expansion projects at the Abbot Point Coal Terminal.

Suppliers
The main types of goods we purchase in support of our mining activities are mining equipment and replacement parts, diesel fuel, ammonium-nitrate and emulsion-based explosives, off-the-road (OTR) tires, steel-related (including roof control materials) products, lubricants and electricity. For some of these goods, there has been some consolidation in the supplier base providing mining materials to the coal industry, such as with suppliers of explosives and both surface and underground equipment, that has limited the number of sources for these materials. In situations where we have chosen to concentrate a large portion of purchases with one supplier, it has been to take advantage of cost savings from larger volumes of purchases, to benefit from long-term pricing for parts and to ensure security of supply.

Demand and lead times for certain surface and underground mining equipment and OTR tires has increased. Despite these market challenges, we do not expect lead times to have a near-term material impact on our financial condition, results of operations or cash flows due to the strategic relationships and long-term supply contracts we have with our suppliers. In addition, we continue to use our global leverage with major suppliers to ensure security of supply to meet the requirements of our growth plans. We have many well-established, strategic relationships with our key suppliers of goods and do not believe we are overly dependent on any of our individual suppliers.

We also purchase services at our mine sites that include maintenance services for mining equipment, temporary labor and other various contracted services, including contract miners and explosive service providers. We do not believe that we are overly dependent on any of our individual service providers.

Table of Contents

Technical Innovation

We continue to emphasize the application of technical innovation to improve equipment performance and operating efficiencies. Development is typically undertaken and funded by equipment manufacturers with our engineering, maintenance and purchasing personnel providing input and expertise to the manufacturers that will design and produce equipment that we believe will add value to the business. Some examples of these efforts include the following:

- Ultra class haul trucks to increase overburden removal capacity and lower mining cost;
- Fleet management and vehicle diagnostics systems to enhance equipment availability;
- Expanded networking and server capacity to gather detailed information on both production and vehicle diagnostics to allow for real time alerts and long term analysis used to improve production and reduce downtime; and
- Longwall automation technology to allow for more efficient longwall mining.

We use maintenance standards based on reliability-centered maintenance practices at all operations to increase equipment utilization and reduce maintenance and capital spending by extending the equipment life, while minimizing the risk of premature failures. Specialized maintenance reliability software is used at many operations to better support improved equipment strategies, predict equipment condition and aid analysis necessary for better decision-making for such issues as component replacement timing. We also use in-house developed software to schedule and monitor trains, mine and pit blending, quality and customer shipments to enhance our reliability and product consistency. We also continue to advance new technologies to maximize safety. We are currently in process with a pilot program for a new proximity detection system at a section of one of our underground mines that is designed to automatically stop a continuous miner and coal hauler if a person is detected within the operating range. In addition, personnel tracking systems were deployed across all underground operations in the U.S. which can provide continuous real time locations of workers underground.

Competition

The markets in which we sell our coal are highly competitive. We compete on the basis of coal quality, delivered price, customer service and support and reliability. Demand for coal and the prices that we will be able to obtain for our coal are influenced by factors beyond our control, including the demand for electricity and steel and the availability and price of alternatives. Our principal U.S. competitors (listed alphabetically) are other large coal producers, including Alpha Natural Resources, Inc., Arch Coal, Inc., Cloud Peak Energy Inc., and CONSOL Energy Inc., which collectively accounted for approximately 40% of total U.S. coal production in 2010 (most recent publicly available data according to the National Mining Association's "2010 Coal Producer Survey"). Major international competitors (listed alphabetically) include Anglo-American PLC, BHP Billiton, China Coal, Rio Tinto, Shenhua Group and Xstrata PLC.

Employees

As of December 31, 2011, we had approximately 8,300 employees, which included approximately 5,600 hourly employees. As of such date, approximately 24% of our hourly employees were represented by organized labor unions and generated 7% of 2011 coal production. In the U.S., those represented by organized labor unions include hourly workers at our Kayenta Mine in Arizona and at our Willow Lake Mine in Illinois. In Australia, the coal mining industry is highly unionized and the majority of workers employed at our mining operations are members of trade unions. The Construction Forestry Mining and Energy Union represents our Australian hourly production and engineering employees, including those employed through contract mining relationships. All the Australian mine sites have enterprise bargaining agreements. Additional information on labor relations is contained in Note 21 to our consolidated financial statements.

Working Capital

We generally fund our business operations through a combination of available cash and cash equivalents and operating cash flow. In addition, our revolving credit facility (Revolver) available under our senior unsecured credit facility entered into in 2010 (Credit Facility) and our accounts receivable securitization program are available for additional working capital needs. See Liquidity and Capital Resources in Part II, Item 7 for additional information regarding working capital.

Table of Contents

Regulatory Matters — U.S.

Federal, state and local authorities regulate the U.S. coal mining industry with respect to matters such as employee health and safety, permitting and licensing requirements, air quality standards, water pollution, plant and wildlife protection, the reclamation and restoration of mining properties after mining has been completed, the discharge of materials into the environment, surface subsidence from underground mining and the effects of mining on groundwater quality and availability. In addition, the industry is affected by significant legislation mandating certain benefits for current and retired coal miners. Numerous federal, state and local governmental permits and approvals are required for mining operations. We believe that we have obtained all permits currently required to conduct our present mining operations.

We endeavor to conduct our mining operations in compliance with all applicable federal, state and local laws and regulations. However, because of extensive and comprehensive regulatory requirements, violations during mining operations occur from time to time in the industry. None of our violations to date or the monetary penalties assessed have been material.

Mine Safety and Health. We are subject to health and safety standards both at the federal and state level. The regulations are comprehensive and affect numerous aspects of mining operations, including training of mine personnel, mining procedures, blasting, the equipment used in mining operations and other matters.

The Mine Safety and Health Administration (MSHA) is the entity responsible for monitoring compliance with the federal mine health and safety standards. MSHA has various enforcement tools that it can use, including the issuance of monetary penalties and orders of withdrawal from a mine or part of a mine. Some, but not all, of the costs of complying with existing regulations and implementing new safety and health regulations may be passed on to customers.

MSHA has recently taken a number of actions to identify mines with safety issues, and has engaged in a number of targeted enforcement, awareness, outreach and rulemaking activities to reduce the number of mining fatalities, accidents and illnesses. There has also been an industry-wide increase in the monetary penalties assessed for citations of a similar nature.

In Item 4. Mine Safety Disclosure and in Exhibit 95 to this Annual Report on Form 10-K, we provide additional details on how we monitor safety performance and MSHA compliance, as well as provide the mine safety disclosures required pursuant to Section 1503(a) of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the Dodd-Frank Act).

Black Lung. Under the Black Lung Benefits Revenue Act of 1977 and the Black Lung Benefits Reform Act of 1977, as amended in 1981, each U.S. coal mine operator must pay federal black lung benefits and medical expenses to claimants who are current and former employees and last worked for the operator after July 1, 1973. Coal mine operators must also make payments to a trust fund for the payment of benefits and medical expenses to claimants who last worked in the coal industry prior to July 1, 1973. Historically, less than 7% of the miners currently seeking federal black lung benefits are awarded these benefits. The trust fund is funded by an excise tax on U.S. production of up to \$1.10 per ton for deep-mined coal and up to \$0.55 per ton for surface-mined coal, neither amount to exceed 4.4% of the gross sales price.

Environmental Laws. We are subject to various federal and state environmental laws. Some of these laws, discussed below, place many requirements on our coal mining operations. Federal and state regulations require regular monitoring of our mines and other facilities to ensure compliance.

Surface Mining Control and Reclamation Act. In the U.S., the Surface Mining Control and Reclamation Act of 1977 (SMCRA), which is administered by the Office of Surface Mining Reclamation and Enforcement (OSM), established mining, environmental protection and reclamation standards for all aspects of U.S. surface mining as well as many aspects of deep mining. Mine operators must obtain SMCRA permits and permit renewals for mining operations from the OSM. Where state regulatory agencies have adopted federal mining programs under SMCRA, the state becomes the regulatory authority. Except for Arizona, states in which we have active mining operations have achieved primary control of enforcement through federal authorization. In Arizona, we mine on tribal lands and are regulated by OSM

because the tribes do not have SMCRA authorization.

Once a permit application is prepared and submitted to the regulatory agency, it goes through a completeness and technical review. Public notice of the proposed permit is given for a comment period before a permit can be issued. Some SMCRA mine permits take over a year to prepare, depending on the size and complexity of the mine and often take six months to two years to be issued. Regulatory authorities have considerable discretion in the timing of the permit issuance and the public has the right to comment on and otherwise engage in the permitting process, including public hearings and through intervention in the courts. Before a SMCRA permit is issued, a mine operator must submit a bond or other form of financial security to guarantee the performance of reclamation obligations.

Table of Contents

The Abandoned Mine Land Fund, which is part of SMCRA, requires a fee on all coal produced in the U.S. The proceeds are used to rehabilitate lands mined and left unreclaimed prior to August 3, 1977 and to pay health care benefit costs of orphan beneficiaries of the Combined Fund created by the Coal Industry Retiree Health Benefit Act of 1992. The fee was \$0.35 per ton of surface-mined coal and \$0.15 per ton of deep-mined coal, effective through September 30, 2007. Pursuant to the Tax Relief and Health Care Act of 2006, from October 1, 2007 through September 30, 2012, the fee is \$0.315 per ton of surface-mined coal and \$0.135 per ton of underground mined coal. From October 1, 2012 through September 30, 2021, the fee will be reduced to \$0.28 per ton of surface-mined coal and \$0.12 per ton of underground mined coal. SMCRA stipulates compliance with many other major environmental programs. These programs include the Clean Air Act; Clean Water Act; Resource Conservation and Recovery Act (RCRA); and Comprehensive Environmental Response, Compensation, and Liability Acts (CERCLA, commonly known as Superfund). Besides OSM, other federal regulatory agencies are involved in monitoring or permitting specific aspects of mining operations. The U.S. Environmental Protection Agency (EPA) is the lead agency for states or tribes with no authorized programs under the Clean Water Act, RCRA and CERCLA. The U.S. Army Corps of Engineers regulates activities affecting navigable waters and waters of the U.S., including wetlands, and the U.S. Bureau of Alcohol, Tobacco and Firearms regulates the use of explosive blasting materials.

We do not believe there are any matters that pose a material risk to maintaining our existing mining permits or that materially hinder our ability to secure future mining permits. It is our policy to comply with the requirements of the SMCRA and the state and tribal laws and regulations governing mine reclamation.

Clean Air Act. The Clean Air Act and the comparable state laws that regulate the emissions of materials into the air affect U.S. coal mining operations both directly and indirectly. Direct impacts on coal mining and processing operations may occur through the Clean Air Act permitting requirements and/or emission control requirements relating to particulate matter. It is possible that the more stringent national ambient air quality standards (NAAQS) will directly impact our mining operations by, for example, requiring additional controls of emissions from our mining equipment and vehicles. Moreover, if the areas in which our mines and coal preparation plants are located suffer from extreme weather events such as droughts, or are designated as non-attainment areas, we could be required to incur significant costs to install additional emissions control equipment, or otherwise change our operations and future development. In addition, in September 2009 the EPA adopted new rules tightening and adding additional particulate matter emissions limits for coal preparation and processing plants constructed, reconstructed or modified after April 28, 2008.

The Clean Air Act indirectly, but more significantly, affects the coal industry by extensively regulating the air emissions of sulfur dioxide, nitrogen oxides, mercury, particulate matter and other substances emitted by coal-based electricity generating plants. Air emissions programs that may affect our operations, directly or indirectly, include, but are not limited to, the Acid Rain Program, NOx SIP Call, the Clean Air Interstate Rule (CAIR), New Source Performance Standards (NSPS), Maximum Achievable Control Technology (MACT) emissions limits for Hazardous Air Pollutants, the Regional Haze program and New Source Review. In addition, in recent years the EPA has adopted more stringent NAAQS for particulate matter, nitrogen oxide and sulfur dioxide. The EPA has also proposed a more stringent ozone standard but withdrew it last year; the ozone standard is due for reconsideration in 2013. Many of these programs and regulations have resulted in litigation which has not been completely resolved.

On July 6, 2011, the EPA finalized its final Cross State Air Pollution Rule (CSAPR) to address interstate transport of emissions from coal-based electrical generation plants. The rule, which was developed to replace CAIR and includes a supplemental rulemaking finalized on December 15, 2011, imposes state-by state budgets on nitrogen oxides and sulfur dioxide emissions from coal-based electrical generation plants in 23 states from Texas eastward (not including the New England states or Delaware) and provides for an allowance trading program to meet those budgets. While CSAPR has an initial compliance deadline of January 1, 2012, the rule was challenged and on December 30, 2011, the U.S. Court of Appeals for the District of Columbia stayed CSAPR and advised that the EPA is expected to continue

administering CAIR until the pending challenges are resolved. Expedited briefing on the merits of the challenge is underway.

On December 16, 2011, the EPA issued the Mercury and Air Toxic Standards which imposes MACT emission limits on hazardous air emissions from new and existing coal-based electric generating plants. The rule also revised NSPS for nitrogen oxides, sulfur dioxides and particulate matter for coal-based electricity generating plants. The rule provides three years for compliance, or up to four years for existing sources if necessary. We believe that challenges to this rule are likely.

In December 2009, the EPA published its finding that atmospheric concentrations of greenhouse gases endanger public health and welfare within the meaning of the Clean Air Act, and that emissions of greenhouse gases from new motor vehicles and new motor vehicle engines are contributing to air pollution that are endangering public health and welfare within the meaning of the Clean Air Act. In May 2010, the EPA published final greenhouse gas emission standards for new motor vehicles pursuant to the Clean Air Act. Both the endangerment finding and motor vehicle standards are the subject of litigation.

Table of Contents

Because the Clean Air Act specifies that the prevention of significant deterioration (PSD) program applies once emissions of regulated pollutants exceed either 100 or 250 tons per year (depending on the type of source), millions of sources previously unregulated under the Clean Air Act could be subject to greenhouse gas reduction measures. The EPA published a rule in June 2010 to limit the number of greenhouse gas sources that would be subject to the PSD program. In the so-called “tailoring rule,” the EPA limited the regulation of greenhouse gases from certain stationary sources to those that emit more than 75,000 tons of greenhouse gases per year (for sources that would be subject to PSD permitting regardless of greenhouse gas emissions due to other emissions) or 100,000 tons of greenhouse gases per year (for sources not subject to PSD permitting for any other air emissions), measured by “carbon dioxide equivalent.” Whether the EPA has the statutory authority under the Clean Air Act to adopt the tailoring rule is the subject of litigation.

In December 2010, the EPA announced a settlement with states and environmental groups that had filed litigation challenges to the EPA's decisions not to establish greenhouse gas emission standards for fossil fuel-fired power plants and for petroleum refineries under section 111 of the Clean Air Act. In the settlement, the EPA agreed: (1) to sign proposed new source performance standards for new and modified electric utility steam generating units under section 111(b), as well as proposed guidelines for states' development of emission standards for existing electric utility steam generating units under section 111(d), by July 26, 2011; and (2) to take final action on the proposed section 111(b) standards and section 111(d) guidelines by May 26, 2012. The EPA has not yet proposed these rules. Whatever the EPA determines the new source performance standards to be, this will then be the minimum requirement for best available control technology requirements under the PSD program.

Clean Water Act. The Clean Water Act of 1972 affects U.S. coal mining operations by requiring both technology-based and, if necessary, water quality-based effluent limitations and treatment standards for wastewater discharge through the National Pollutant Discharge Elimination System (NPDES). Regular monitoring, reporting requirements and performance standards are requirements of NPDES permits that govern the discharge of pollutants from mine-related point sources into water. Section 404 of the Clean Water Act requires mining companies to obtain U.S. Army Corps of Engineers permits to place material in streams for the purpose of creating slurry ponds, water impoundments, refuse areas, valley fills or other mining activities.

States are empowered to develop and apply “in stream” water quality standards. These standards are subject to change and must be approved by the EPA. Discharges must either meet state water quality standards or be authorized through available regulatory processes such as alternate standards or variances. “In stream” standards vary from state to state. Additionally, through the Clean Water Act section 401 certification program, states have approval authority over federal permits or licenses that might result in a discharge to their waters. States consider whether the activity will comply with their water quality standards and other applicable requirements in deciding whether or not to certify the activity.

Resource Conservation and Recovery Act. RCRA, which was enacted in 1976, affects U.S. coal mining operations by establishing “cradle to grave” requirements for the treatment, storage and disposal of hazardous wastes. Typically, the only hazardous wastes generated at a mine site are those from products used in vehicles and for machinery maintenance. Coal mine wastes, such as overburden and coal cleaning wastes, are not considered hazardous wastes under RCRA.

Subtitle C of RCRA exempted fossil fuel combustion wastes from hazardous waste regulation until the EPA completed a report to Congress and made a determination on whether the wastes should be regulated as hazardous. In a 1993 regulatory determination, the EPA addressed some high volume-low toxicity coal combustion materials generated at electric utility and independent power producing facilities. In May 2000, the EPA concluded that coal combustion materials do not warrant regulation as hazardous wastes under RCRA. The EPA has retained the hazardous waste exemption for these materials. The EPA is evaluating national waste guidelines for coal combustion

materials placed at a mine. National guidelines for mine-fills may affect the cost of ash placement at mines. The EPA revisited its May 2000 determination and proposed new requirements for coal combustion residue (CCR) management on June 21, 2010. That proposal contains two options: (1) to continue to regulate CCR as a non-hazardous waste, or (2) to regulate CCR as special waste under the hazardous waste regulations.

CERCLA (Superfund). CERCLA affects U.S. coal mining and hard rock operations by creating liability for investigation and remediation in response to releases of hazardous substances into the environment and for damages to natural resources. Under CERCLA, joint and several liabilities may be imposed on waste generators, site owners or operators and others, regardless of fault. Under the EPA's Toxic Release Inventory process, companies are required annually to report the use, manufacture or processing of listed toxic materials that exceed defined thresholds, including chemicals used in equipment maintenance, reclamation, water treatment and ash received for mine placement from power generation customers.

Table of Contents

Endangered Species Act. The U.S. Endangered Species Act and counterpart state legislation is intended to protect species whose populations allow for categorization as either endangered or threatened. With respect to obtaining mining permits, protection of endangered or threatened species may have the effect of prohibiting, limiting the extent or causing delays that may include permit conditions on the timing of soil removal, timber harvesting, road building and other mining or agricultural activities in areas containing the affected species. Based on the species that have been identified on our properties and the current application of these laws and regulations, we do not believe that they will have a material adverse effect on our ability to mine the planned volumes of coal from our properties in accordance with current mining plans. However, there are ongoing lawsuits and petitions under these laws and regulations that, if successful, could have a material adverse effect on our ability to mine some of our properties in accordance with our current mining plans.

Use of Explosives. Our surface mining operations are subject to numerous regulations relating to blasting activities. Pursuant to these regulations, we incur costs to design and implement blast schedules and to conduct pre-blast surveys and blast monitoring. In addition, the storage of explosives is subject to strict federal regulatory requirements.

Regulatory Matters — Australia

The Australian mining industry is regulated by Australian federal, state and local governments with respect to environmental issues such as land reclamation, water quality, air quality, dust control, noise, planning issues (such as approvals to expand existing mines or to develop new mines), and health and safety issues. The Australian federal government retains control over the level of foreign investment and export approvals. Industrial relations are regulated under both federal and state laws. Australian state governments also require coal companies to post deposits or give other security against land which is being used for mining, with those deposits being returned or security released after satisfactory reclamation is completed.

Native Title and Cultural Heritage. Since 1992, the Australian courts have recognized that native title to lands, as recognized under the laws and customs of the Aboriginal inhabitants of Australia, may have survived the process of European settlement. These developments are supported by the Federal Native Title Act which recognizes and protects native title, and under which a national register of native title claims has been established. Native title rights do not extend to minerals; however, native title rights can be affected by the mining process unless those rights have previously been extinguished. There is also federal and state legislation to prevent damage to Aboriginal cultural heritage and archaeological sites.

Mining Tenements and Environmental. In Queensland and New South Wales, the development of a mine requires both the grant of a right to impact the environment and an approval which authorizes the environmental impact. These approvals are obtained under separate legislation from separate government authorities. However, the application processes run concurrently and are also concurrent with any native title or cultural heritage process that is required. The environmental impacts of mining projects are regulated by state and federal governments. Federal regulation will only apply if the particular project will significantly impact a matter of national environmental significance (e.g., endangered species or particular protected places). If so, it will also be regulated by the federal government.

Occupational Health and Safety. The combined effect of various state and federal statutes requires an employer to ensure that persons employed in a mine are safe from injury by providing a safe working environment and systems of work; safety machinery; equipment, plant and substances; and appropriate information, instruction, training and supervision. Currently all states and territories are responsible for making and enforcing their own laws. Although these draw on a similar approach for regulating workplaces, there are some differences in the application and detail of the laws. Mining legislation is currently being harmonized across Australia with a January 1, 2013 target date. The harmonization process will be achieved first by developing core legislation that will be consistent across all of the states; the remainder of each states' legislation may be state specific. The finalized core legislation is expected to be completed by July 1, 2012.

In recognition of the specialized nature of mining and mining activities, specific occupational health and safety obligations have been mandated under state legislation that deals specifically with the coal mining industry. Mining employers, owners, directors and managers, persons in control of work places, mine managers, supervisors and employees are all subject to these duties.

Industrial Relations. A national industrial relations system administered by the federal government applies to all private sector employers and employees. The system largely became operational in July 2009 and fully operational in January 2010. The matters regulated under the national system include employment conditions, unfair dismissal, enterprise bargaining, industrial action and resolution of workplace disputes.

Table of Contents

National Greenhouse and Energy Reporting Act 2007 (NGER Act). The NGER Act introduces a single national reporting system relating to greenhouse gas emissions and energy production and consumption, which will underpin a future emissions trading scheme. The NGER Act imposes requirements for certain corporations to report greenhouse gas emissions and abatement actions, as well as energy production and consumption. Both foreign and local corporations that meet the prescribed CO₂ and energy production or consumption limits in Australia (controlling corporations) must comply with the NGER Act. One of our subsidiaries is now registered as a controlling corporation and must report each financial year about the greenhouse gas emissions and energy production and consumption of our Australian entities.

Carbon Pricing Framework. In the fourth quarter of 2011, the Australian government passed a legislative package that included a carbon pricing framework that commences July 1, 2012. The carbon price will initially be \$23.00 Australian dollars per tonne of carbon dioxide equivalent emissions, escalated by 2.5% per year for inflation over a three year period. After June 30, 2015, the carbon price mechanism will transition to an emissions trading scheme. We believe that all of our Australian operations will be impacted by the fugitive emissions portion of the framework (defined as the methane and carbon dioxide which escapes into the atmosphere when coal is mined and gas is produced), which we estimate will initially average \$2.00 to \$3.25 Australian dollars per tonne of coal produced annually. Actual results will be dependent upon the volume of tons produced at each of our mining locations as the impact per tonne at our surface mines will generally be less than the impact per tonne at our underground mines. In addition, our Australian mines will be impacted by the phased reduction of the government's diesel fuel rebate to capture emissions from fuel combustion. Our North Goonyella, Wambo and Metropolitan mines will be eligible to apply for a portion of the government's approximately \$1.3 billion Australian dollars of transition benefits that would provide assistance based on historical emissions intensity data to the most emissions-intensive coal mines over a six-year period.

Regulatory Matters — Mongolia

As noted above, we currently own a 50% interest in the Peabody-Winsway Resources B.V. joint venture, which holds coal and mineral interests in Mongolia and is regulated by Mongolian federal, provincial and local governments with respect to exploration, development, production, occupational health, mine safety, water use, environmental protection and remediation, foreign investment and other related matters. The Mineral Resources Authority of Mongolia is the government agency with the authority to issue, extend and revoke mineral licenses, which generally give the license holder the right to engage in the mining of minerals within the license area for 30 years (with the right to extend for two additional periods of 20 years). Mongolian law provides for state participation in the exploitation of any mineral deposit of "strategic importance," as determined by the Mongolian Parliament.

Global Climate

In the U.S., Congress has considered legislation addressing global climate issues and greenhouse gas emissions, but to date nothing has been enacted. While it is possible that the U.S. will adopt legislation in the future, the timing and specific requirements of any such legislation are uncertain. In the absence of new U.S. federal legislation, the EPA is undertaking steps to regulate greenhouse gas emissions pursuant to the Clean Air Act. In response to the 2007 U.S. Supreme Court ruling in *Massachusetts v. EPA*, the EPA has commenced several rulemaking projects as described above under "Regulatory Matters-U.S. - Clean Air Act."

A number of states in the U.S. have adopted programs to regulate greenhouse gas emissions. For example, ten northeastern states (Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Rhode Island and Vermont) entered into the Regional Greenhouse Gas Initiative (RGGI) in 2005, which is a mandatory cap-and-trade program to cap regional carbon dioxide emissions from power plants. In 2011, New Jersey announced its withdrawal from RGGI effective January 1, 2012. Six midwestern states (Illinois, Iowa, Kansas, Michigan, Minnesota and Wisconsin) and one Canadian province have entered into the Midwestern Regional Greenhouse Gas Reduction Accord (MGGRA) to establish voluntary regional greenhouse gas reduction targets and

develop a voluntary multi-sector cap-and-trade system to help meet the targets, though in the past year the group's website has been taken down and a senior official in the Midwestern Governors Association reported in February 2011 that the program was “effectively abandoned,” according to the press. Seven western states (Arizona, California, Montana, New Mexico, Oregon, Utah and Washington) and four Canadian provinces entered into the Western Climate Initiative (WCI) in 2008 to establish a voluntary regional greenhouse gas reduction goal and develop market-based strategies to achieve emissions reductions. However, in November 2011 the WCI announced that six states had withdrawn from the WCI, leaving California and four Canadian provinces as the remaining members. As of early 2012, only California and Quebec have adopted greenhouse gas cap-and-trade regulations and intend to move forward with a regional trading program. Due to litigation and other delays, the regional trading program is not scheduled to commence until January 1, 2013. Other participants in WCI, RGGI and MGGRA have either left those organizations entirely or have joined the new North America 2050 organization which seeks to address energy and climate issues in other ways.

Table of Contents

In 2006, the California legislature approved legislation allowing the imposition of statewide caps on carbon dioxide emissions. Similar legislation was adopted in 2007 in Hawaii, Minnesota and New Jersey. The California Air Resources Board is in the process of finalizing regulations to implement a cap-and-trade program pursuant to the 2006 legislation, and that program started on January 1, 2012 with an enforceable compliance obligation beginning with the 2013 greenhouse gas emissions.

In the U.S., several states have enacted legislation requiring electricity suppliers to use renewable energy sources to generate a certain percentage of power or that provide financial incentives to electricity suppliers for using renewable energy sources.

We participated in the DOE's Voluntary Reporting of Greenhouse Gases Program until its suspension in May 2011, and regularly disclose the quantity of emissions per ton of coal produced by us in the U.S. The vast majority of our emissions are generated by the operation of heavy machinery to extract and transport material at our mines.

The Kyoto Protocol, adopted in December 1997 by the signatories to the 1992 United Nations Framework Convention on Climate Change, established a binding set of emission targets for developed nations. The U.S. signed the Kyoto Protocol but it was not ratified by the U.S. Senate. Australia ratified the Kyoto Protocol in December 2007 and became a full member in March 2008. There are continuing discussions to develop a treaty to replace the Kyoto Protocol after its expiration in 2012, including at the Cancun meetings in late 2010 and initial steps toward that goal were taken and at the Durban meeting in late 2011. At the Durban meeting it was agreed that the Kyoto Protocol would have a second commitment period, from 2013 to 2017, but no further actions were agreed upon.

Australia's Parliament passed carbon pricing legislation in November 2011. The first three years of the program involve the imposition of a carbon tax commencing in July 2012, and a mandatory greenhouse gas emissions trading program commencing in 2015. However, the program is a central issue in current election debates.

Enactment of laws or passage of regulations by the U.S. or some of its states or by other countries regarding emissions from the mining of coal or other actions to limit such emissions, are not expected to have a material adverse effect on our results of operations, financial condition or cash flows.

Enactment of laws or passage of regulations by the U.S. or some of its states or by other countries regarding emissions from the combustion of coal or other actions to limit such emissions, could result in electricity generators switching from coal to other fuel sources. The potential financial impact on us of recent or future laws or regulations will depend upon the degree to which any such laws or regulations forces electricity generators to diminish their reliance on coal as a fuel source. That, in turn, will depend on a number of factors, including the specific requirements imposed by any such laws or regulations, the time periods over which those laws or regulations would be phased in, the state of commercial development and deployment of CCS technologies and the alternative markets for coal. In view of the significant uncertainty surrounding each of these factors, it is not possible for us to reasonably predict the impact that any such laws or regulations may have on our results of operations, financial condition or cash flows.

Additional Information

We file annual, quarterly and current reports, and any amendments to those reports, proxy statements and other information with the SEC. You may access and read our SEC filings free of charge through our website, at www.peabodyenergy.com, or the SEC's website, at www.sec.gov. Information on such websites does not constitute part of this document. You may also read and copy any document we file at the SEC's public reference room located at 100 F Street, N.E., Washington, D.C. 20549. Please call the SEC at 1-800-SEC-0330 for further information on the public reference room.

You may also request copies of our filings, free of charge, by telephone at (314) 342-3400 or by mail at: Peabody Energy Corporation, Peabody Plaza, 701 Market Street, Suite 900, St. Louis, Missouri 63101, attention: Investor Relations.

Table of Contents

Item 1A. Risk Factors.

The following risk factors relate specifically to the risks associated with our continuing operations.

Risks Associated with Our Operations

A decline in coal prices could negatively affect our profitability.

Our profitability depends upon the prices we receive for our coal. Coal prices are dependent upon factors beyond our control, including:

- the strength of the global economy;
- the demand for electricity;
- the demand for steel, which may lead to price fluctuations in the periodic repricing of our metallurgical coal contracts;
- the global supply of thermal and metallurgical coal;
- weather patterns and natural disasters;
- competition within our industry and the availability and price of alternatives, including natural gas;
- the proximity, capacity and cost of transportation;
- coal industry capacity;
- domestic and foreign governmental regulations and taxes, including those establishing air emission standards for coal-fueled power plants or mandating increased use of electricity from renewable energy sources;
- regulatory, administrative and judicial decisions, including those affecting future mining permits; and
- technological developments, including those intended to convert coal-to-liquids or gas and those aimed at capturing and storing carbon dioxide.

In the U.S., our strategy is to selectively renew, or enter into new, long-term supply agreements when we can do so at prices we believe are favorable. In Australia, current industry practice, and our practice, is to negotiate pricing for metallurgical coal contracts quarterly and seaborne thermal coal contracts annually.

If a substantial number of our long-term coal supply agreements terminate, our revenues and operating profits could suffer if we are unable to find alternate buyers willing to purchase our coal on comparable terms to those in our contracts.

Most of our sales are made under coal supply agreements, which are important to the stability and profitability of our operations. The execution of a satisfactory coal supply agreement is frequently the basis on which we undertake the development of coal reserves required to be supplied under the contract, particularly in the U.S. In 2011, 91% of our worldwide sales volume was sold under long-term coal supply agreements. At January 31, 2012, our sales backlog, including backlog subject to price reopener and/or extension provisions, was over 1 billion tons, representing over four years of current production in backlog based on our 2011 production from continuing operations of 227.5 million tons. Contracts in backlog have remaining terms ranging up to 16 years.

Many of our coal supply agreements contain provisions that permit the parties to adjust the contract price upward or downward at specified times. We may adjust these contract prices based on inflation or deflation and/or changes in the factors affecting the cost of producing coal, such as taxes, fees, royalties and changes in the laws regulating the mining, production, sale or use of coal. In a limited number of contracts, failure of the parties to agree on a price under those provisions may allow either party to terminate the contract. We sometimes experience a reduction in coal prices in new long-term coal supply agreements replacing some of our expiring contracts. Coal supply agreements also typically contain force majeure provisions allowing temporary suspension of performance by us or the customer during the duration of specified events beyond the control of the affected party. Most of our coal supply agreements contain provisions requiring us to deliver coal meeting quality thresholds for certain characteristics such as Btu, sulfur content, ash content, grindability and ash fusion temperature. Failure to meet these specifications could result in economic penalties, including price adjustments, the rejection of deliveries or termination of the contracts. Moreover, some of these agreements permit the customer to terminate the contract if transportation costs, which our customers typically bear, increase substantially. In addition, some of these contracts allow our customers to terminate their contracts in the event of changes in regulations affecting our industry that restrict the use or type of coal permissible at the customer's plant or increases the price of coal beyond specified limits.

Table of Contents

The operating profits we realize from coal sold under supply agreements depend on a variety of factors. In addition, price adjustment and other provisions may increase our exposure to short-term coal price volatility provided by those contracts. If a substantial portion of our coal supply agreements were modified or terminated, we could be materially adversely affected to the extent that we are unable to find alternate buyers for our coal at the same level of profitability. Market prices for coal vary by mining region and country. As a result, we cannot predict the future strength of the coal market overall or by mining region and cannot provide assurance that we will be able to replace existing long-term coal supply agreements at the same prices or with similar profit margins when they expire. The loss of, or significant reduction in, purchases by our largest customers could adversely affect our revenues. For the year ended December 31, 2011 we derived 23% of our total coal sales revenues from our five largest customers. Those five customers were supplied primarily from 24 coal supply agreements (excluding trading transactions) expiring at various times from 2012 to 2025. The contract contributing the greatest amount of annual revenue in 2011 was approximately \$311 million, or approximately 4% of our 2011 total revenue base. We are currently discussing the extension of existing agreements or entering into new long-term agreements with some of these customers, but these negotiations may not be successful and those customers may not continue to purchase coal from us under long-term coal supply agreements. If a number of these customers significantly reduce their purchases of coal from us, or if we are unable to sell coal to them on terms as favorable to us as the terms under our current agreements, our financial condition and results of operations could suffer materially. In addition, our revenue could be adversely affected by a decline in customer purchases due to lack of demand, cost of competing fuels and environmental regulations.

Our operating results could be adversely affected by unfavorable economic and financial market conditions. In recent years, the global economic recession and the worldwide financial and credit market disruptions had a negative impact on us and on the coal industry generally. If any of these conditions return or if there are downturns in economic conditions, particularly in developing countries such as China and India, our business, financial condition or results of operations could be adversely affected. While we are focused on cost control, productivity improvements, increased contributions from our high-margin operations and capital discipline, there can be no assurance that these actions, or any others we may take, will be sufficient in response to downturns in economic and financial conditions. Our ability to collect payments from our customers could be impaired if their creditworthiness deteriorates. Our ability to receive payment for coal sold and delivered or for financially settled contracts depends on the continued creditworthiness of our customers and counterparties. Our customer base has changed with deregulation in the U.S. as utilities have sold their power plants to their non-regulated affiliates or third parties, and with our continued expansion in the Asia-Pacific region. These new customers may have credit ratings that are below investment grade or not rated. If deterioration of the creditworthiness of our customers occurs, our accounts receivable securitization program and our business could be adversely affected.

Risks inherent to mining could increase the cost of operating our business.

Our mining operations are subject to conditions that can impact the safety of our workforce, or delay coal deliveries or increase the cost of mining at particular mines for varying lengths of time. These conditions include fires and explosions from methane gas or coal dust; accidental minewater discharges; weather, flooding and natural disasters; unexpected maintenance problems; key equipment failures; variations in coal seam thickness; variations in the amount of rock and soil overlying the coal deposit; variations in rock and other natural materials and variations in geologic conditions. We maintain insurance policies that provide limited coverage for some of these risks, although there can be no assurance that these risks would be fully covered by our insurance policies. Despite our efforts, significant mine accidents could occur and have a substantial impact on our results of operations, financial condition or cash flows. If transportation for our coal becomes unavailable or uneconomic for our customers, our ability to sell coal could suffer.

Transportation costs represent a significant portion of the total cost of coal and the cost of transportation is a critical factor in a customer's purchasing decision. Increases in transportation costs and the lack of sufficient rail and port capacity could lead to reduced coal sales. As of December 31, 2011, certain coal supply agreements permit the customer to terminate the contract if the cost of transportation increases by an amount over specified levels in any given 12-month period.

Table of Contents

We depend upon rail, barge, trucking, overland conveyor and ocean-going vessels to deliver coal to markets. While our coal customers typically arrange and pay for transportation of coal from the mine or port to the point of use, disruption of these transportation services because of weather-related problems, infrastructure damage, strikes, lock-outs, lack of fuel or maintenance items, underperformance of the port and rail infrastructure, congestion and balancing systems which are imposed to manage vessel queuing and demurrage, non-performance or delays by co-shippers, transportation delays or other events could temporarily impair our ability to supply coal to our customers and thus could adversely affect our results of operations.

A decrease in the availability or increase in costs of key supplies, capital equipment or commodities such as diesel fuel, steel, explosives and tires could decrease our anticipated profitability.

Our mining operations require a reliable supply of mining equipment, replacement parts, fuel, explosives, tires, steel-related products (including roof control materials), lubricants and electricity. There has been some consolidation in the supplier base providing mining materials to the coal industry, such as with suppliers of explosives and both surface and underground equipment, that has limited the number of sources for these materials. In situations where we have chosen to concentrate a large portion of purchases with one supplier, it has been to take advantage of cost savings from larger volumes of purchases and to ensure security of supply. If the cost of any of these inputs increased significantly, or if a source for these supplies or mining equipment were unavailable to meet our replacement demands, our profitability could be reduced or we could experience a delay or halt in our production.

An inability of trading, brokerage, mining or freight sources to fulfill the delivery terms of their contracts with us could reduce our profitability.

In conducting our trading, brokerage and mining operations, we utilize third-party sources of coal production and transportation, including contract miners and brokerage sources, to fulfill deliveries under our coal supply agreements.

In Australia, the majority of our volume comes from mines that utilize contract miners. Employee relations at mines that use contract miners are the responsibility of the contractor.

Our profitability or exposure to loss on transactions or relationships is dependent upon the reliability (including financial viability) and price of the third-party suppliers, our obligation to supply coal to customers in the event that weather, flooding, natural disasters or adverse geologic mining conditions restrict deliveries from our suppliers, our willingness to participate in temporary cost increases experienced by our third-party coal suppliers, our ability to pass on temporary cost increases to our customers, the ability to substitute, when economical, third-party coal sources with internal production or coal purchased in the market and the ability of our freight sources to fulfill their delivery obligations. Market volatility and price increases for coal or freight on the international and domestic markets could result in non-performance by third-party suppliers under existing contracts with us, in order to take advantage of the higher prices in the current market. Such non-performance could have an adverse impact on our ability to fulfill deliveries under our coal supply agreements.

Our trading and hedging activities may expose us to earnings volatility and other risks.

We enter into hedging arrangements designed primarily to manage market price volatility of foreign currency (primarily the Australian dollar), diesel fuel and explosives. Also, from time to time, we manage the interest rate risk associated with our variable and fixed rate borrowings using interest rate swaps. Generally, we attempt to designate hedging arrangements as cash flow hedges with gains or losses recorded as a separate component of stockholders' equity until the hedged transaction occurs (or until hedge ineffectiveness is determined). While we utilize a variety of risk monitoring and mitigation strategies, those strategies require judgment and they cannot anticipate every potential outcome or the timing of such outcomes. As such, there is potential for these hedges to no longer qualify for hedge accounting. If that were to happen, we will be required to recognize the mark to market movements through current year earnings, possibly resulting in increased volatility in our income in future periods. In addition, to the extent that we engage in hedging activities, we may be prevented from realizing the benefits of future price decreases of foreign currency, diesel fuel and explosives.

We also enter into derivative trading instruments, some of which require us to post margin based on the value of those instruments and other credit factors. If our credit is downgraded, the fair value of our hedge positions move significantly, or laws or regulations are passed requiring all hedge arrangements to be exchange-traded or exchange-cleared, we could be required to post additional margin, which could impact our liquidity.

Table of Contents

Through our trading and hedging activities, we are also exposed to the nonperformance and credit risk with various counterparties, including exchanges and other financial intermediaries. Should the counterparties to these arrangements fail to perform, we may be forced to enter into alternative arrangements, which could negatively impact our profitability and/or liquidity. In addition, some of our trading and brokerage activities include an increasing number of exchange-settled transactions, which exposes us to the margin requirements of the exchange for daily changes in the value of our positions. If there are significant and extended unfavorable price movements against our positions, or if there are future regulations that impose new margin requirements, position limits and capital charges, even if not directly applicable to us, our liquidity could be impacted.

Our ability to operate our company effectively could be impaired if we lose key personnel or fail to attract qualified personnel.

We manage our business with a number of key personnel, the loss of whom could have a material adverse effect on us. In addition, as our business develops and expands, we believe that our future success will depend greatly on our continued ability to attract and retain highly skilled and qualified personnel, particularly personnel with mining experience. We cannot provide assurance that key personnel will continue to be employed by us or that we will be able to attract and retain qualified personnel in the future. Failure to retain or attract key personnel could have a material adverse effect on us.

We could be negatively affected if we fail to maintain satisfactory labor relations.

As of December 31, 2011, we had approximately 8,300 employees, which included approximately 5,600 hourly employees. Approximately 24% of our hourly employees were represented by organized labor unions and generated 7% of 2011 coal production. Additionally, those employed through contract mining relationships in Australia are also members of trade unions. Relations with our employees and, where applicable, organized labor are important to our success. If some or all of our current non-union operations were to become unionized, we could incur an increased risk of work stoppages, reduced productivity and higher labor costs. Also, if we fail to maintain good relations with our union workforce, we could experience labor disputes, work stoppages or other disruptions in production that could negatively impact our profitability.

Our mining operations could be adversely affected if we fail to appropriately secure our obligations.

U.S. federal and state laws and Australian laws require us to secure certain of our obligations to reclaim lands used for mining, to pay federal and state workers' compensation, to secure coal lease obligations and to satisfy other miscellaneous obligations. The primary methods we use to meet those obligations are to post a corporate guarantee (i.e., self bond), provide a third-party surety bond or provide a letter of credit. As of December 31, 2011, we had \$929.6 million of self bonding in place for our reclamation obligations. As of December 31, 2011, we also had outstanding surety bonds with third parties, bank guarantees and letters of credit of \$1,214.6 million, of which \$791.6 million was for post-mining reclamation, \$76.1 million related to workers' compensation obligations, \$104.7 million was for coal lease obligations and \$242.2 million was for other obligations, including collateral for surety companies and bank guarantees, road maintenance and performance guarantees. Surety bonds are typically renewable on a yearly basis. Surety bond issuers and holders may not continue to renew the bonds or may demand additional collateral upon those renewals. Letters of credit are subject to us maintaining compliance under our two primary facilities used for such items, which is our Credit Facility and our accounts receivable securitization program. Our failure to retain, or inability to acquire, surety bonds or letters of credit or to provide a suitable alternative would have a material adverse effect on us. That failure could result from a variety of factors including the following:

- lack of availability, higher expense or unfavorable market terms of new surety bonds;
- restrictions on the availability of collateral for current and future third-party surety bond issuers under the terms of our indentures, Credit Facility or our 2011 term loan facility (2011 Term Loan Facility);
- the exercise by third-party surety bond issuers of their right to refuse to renew the surety; and
- the inability to renew our Credit Facility.

Our ability to self bond reduces our costs of providing financial assurances. To the extent we are unable to maintain our current level of self bonding due to legislative or regulatory changes or changes in our financial condition, our costs would increase.

Table of Contents

Our mining operations are extensively regulated, which imposes significant costs on us, and future regulations and developments could increase those costs or limit our ability to produce coal.

Federal, state and local authorities regulate the coal mining industry with respect to matters such as employee health and safety, permitting and licensing requirements, air quality standards, water pollution, plant and wildlife protection, reclamation and restoration of mining properties after mining is completed, the discharge of materials into the environment, surface subsidence from underground mining and the effects that mining has on groundwater quality and availability. Numerous governmental permits and approvals are required for mining operations. We are required to prepare and present to federal, state and local authorities data pertaining to the effect that any proposed exploration for or production of coal may have upon the environment. The public, including non-governmental organizations, opposition groups and individuals, have statutory rights to comment upon and submit objections to requested permits and approvals. The costs, liabilities and requirements associated with these regulations may be costly and time-consuming and may delay commencement or continuation of exploration or production.

The possibility exists that new legislation and/or regulations and orders related to the environment or employee health and safety may be adopted and may materially adversely affect our mining operations, our cost structure and/or our customers' ability to use coal. New legislation or administrative regulations (or new interpretations by the relevant government authorities of existing laws and regulations), including proposals related to the protection of the environment or the reduction of greenhouse gas emissions that would further regulate and tax the coal industry, may also require us or our customers to change operations significantly or incur increased costs. Some of our coal supply agreements contain provisions that allow a purchaser to terminate its contract if legislation is passed that either restricts the use or type of coal permissible at the purchaser's plant or results in specified increases in the cost of coal or its use. These factors and legislation, if enacted, could have a material adverse effect on our financial condition and results of operations.

A number of laws, including in the U.S., CERCLA, impose liability relating to contamination by hazardous substances. Such liability may involve the costs of investigating or remediating contamination and damages to natural resources, as well as claims seeking to recover for property damage or personal injury caused by hazardous substances. Such liability may arise from conditions at formerly, as well as currently, owned or operated properties, and at properties to which hazardous substances have been sent for treatment, disposal, or other handling. Liability under CERCLA and similar state statutes is without regard to fault, and typically is joint and several, meaning that a person may be held responsible for more than its share, or even all, of the liability involved. Our mining operations involve some use of hazardous materials. In addition, we have accrued for liability arising out of contamination associated with Gold Fields Mining, LLC (Gold Fields), a dormant, non-coal-producing subsidiary of ours that was previously managed and owned by Hanson PLC, or with Gold Fields' former affiliates. Hanson PLC, which is a predecessor owner of ours, transferred ownership of Gold Fields to us in the February 1997 spin-off of its energy business. Gold Fields is currently a defendant in several lawsuits and has received notices of several other potential claims arising out of lead contamination from mining and milling operations it conducted in northeastern Oklahoma. Gold Fields is also involved in investigating or remediating a number of other contaminated sites. See Note 23 to our consolidated financial statements for a description of pending legal proceedings involving Gold Fields.

If the assumptions underlying our asset retirement obligations for reclamation and mine closures are materially inaccurate, our costs could be significantly greater than anticipated.

Our asset retirement obligations primarily consist of spending estimates for surface land reclamation and support facilities at both surface and underground mines in accordance with federal and state reclamation laws in the U.S. and Australia as defined by each mining permit. These obligations are determined for each mine using various estimates and assumptions including, among other items, estimates of disturbed acreage as determined from engineering data, estimates of future costs to reclaim the disturbed acreage and the timing of these cash flows, discounted using a credit-adjusted, risk-free rate. Our management and engineers periodically review these estimates. If our assumptions do not materialize as expected, actual cash expenditures and costs that we incur could be materially different than currently estimated. Moreover, regulatory changes could increase our obligation to perform reclamation and mine closing activities. The resulting estimated asset retirement obligation could change significantly if actual amounts change significantly from our assumptions, which could have a material adverse effect on our results of operations.

and financial condition.

20

Table of Contents

Our future success depends upon our ability to continue acquiring and developing coal reserves that are economically recoverable.

Our recoverable reserves decline as we produce coal. We have not yet applied for the permits required or developed the mines necessary to use all of our reserves. Moreover, the amount of proven and probable coal reserves described in Item 2. “Properties” involved the use of certain estimates and those estimates could be inaccurate. Furthermore, we may not be able to mine all of our reserves as profitably as we do at our current operations. Our future success depends upon our conducting successful exploration and development activities or acquiring properties containing economically recoverable reserves. Our current strategy includes increasing our reserves through acquisitions of government and other leases and producing properties and continuing to use our existing properties. In certain locations, leases for oil, natural gas and coalbed methane reserves are located on, or adjacent to, some of our reserves, potentially creating conflicting interests between us and lessees of those interests. Other lessees’ rights relating to these mineral interests could prevent, delay or increase the cost of developing our coal reserves. These lessees may also seek damages from us based on claims that our coal mining operations impair their interests. Additionally, the U.S. federal government limits the amount of federal land that may be leased by any company to 150,000 acres nationwide. As of December 31, 2011, we leased a total of 83,582 acres from the federal government. The limit could restrict our ability to lease additional U.S. federal lands.

Our planned mine development projects and acquisition activities may not result in significant additional reserves, and we may not have success developing additional mines. Most of our mining operations are conducted on properties owned or leased by us. Because we do not thoroughly verify title to most of our leased properties and mineral rights until we obtain a permit to mine the property, our right to mine some of our reserves may be materially adversely affected if defects in title or boundaries exist. In addition, in order to develop our reserves, we must also own the rights to the related surface property and receive various governmental permits. We cannot predict whether we will continue to receive the permits necessary for us to operate profitably in the future. We may not be able to negotiate new leases from the government or from private parties, obtain mining contracts for properties containing additional reserves or maintain our leasehold interest in properties on which mining operations have not commenced during the term of the lease. From time to time, we have experienced litigation with lessors of our coal properties and with royalty holders. In addition, from time to time our permit applications have been challenged.

Growth in our global operations increases our risks unique to international mining and trading operations.

We continue to explore ways to expand our international mining operations and global trading and brokerage platform. These efforts have included and are expected to include in the future such things as joint venture mining and exploration interests, such as partnering with other companies to utilize our mining experience for joint mine development, and sourcing coal from off-take arrangements to be sold through our Trading and Brokerage segment. Our international expansion increases our exposure to country risks and the effects of changes in currency exchange rates. Some of our international activities include expansion into developing countries where the economic strength, business practices and counterparty reputations may not be as well developed as in our U.S. or Australian operations. We are also challenged by various political risks, including political instability, the potential for expropriation of assets, costs associated with the repatriation of earnings and the potential for unexpected changes in regulatory requirements. Despite our efforts to mitigate these risks, our results of operations, financial position or cash flow could be adversely affected by these activities.

Risks Related to the Macarthur Acquisition

The extent to which we are able to successfully integrate the newly acquired Macarthur operations and successfully operate and develop the mine sites acquired from Macarthur will have a bearing on our future financial results.

The speed at which we integrate the Macarthur operations will have a direct bearing on the realization of anticipated synergies and benefits. Delays in optimizing the operations of the producing mines and in advancing the development and resource projects into operating mines and coal reserves could impact our future financial results.

We are more exposed to currency exchange rate fluctuations following completion of the Macarthur acquisition, and there is an increased proportion of assets, liabilities and expenses denominated in non-U.S. dollar currencies.

As a result of the completion of the Macarthur acquisition, our consolidated financial results are more exposed to currency exchange rate fluctuations, and an increased proportion of assets, liabilities and expenses are transacted in non-U.S. dollar currencies.

Table of Contents

We present our consolidated financial statements in U.S. dollars and will have a significant proportion of net assets and expenses denominated in the Australian dollar. Our consolidated financial results and capital ratios will, therefore, be sensitive to movements in foreign exchange rates. An appreciation of the Australian dollar relative to the U.S. dollar could have an adverse impact on our consolidated financial results.

If we fail to establish and maintain proper internal controls for the combined business, our ability to produce accurate financial statements or comply with applicable regulations could be impaired.

Prior to the acquisition, Macarthur was not subject to the reporting requirements of the Securities Exchange Act of 1934, as amended, or the Sarbanes-Oxley Act of 2002. As a subsidiary consolidated with our financial statements, Macarthur is subject to such rules and regulations. We are incorporating the internal controls and procedures of Macarthur into our internal control over financial reporting, and we expect to be able to perform an assessment of and report on internal control over financial reporting for the combined business for the year ending December 31, 2012. If we fail to establish and maintain proper internal controls for the combined business, our ability to produce accurate financial statements or comply with applicable regulations could be impaired.

Risks Associated with Our Indebtedness

We could be adversely affected by the failure of financial institutions to fulfill their commitments under our Credit Facility.

As of December 31, 2011, we had \$1.5 billion of available ongoing borrowing capacity under the Revolver portion of our Credit Facility, net of outstanding letters of credit. This committed facility, which matures on June 18, 2015, is provided by a syndicate of financial institutions, with each institution agreeing severally (and not jointly) to make revolving credit loans to us in accordance with the terms of the facility. Although the Credit Facility syndicate consists of over 40 financial institutions, if one or more of these institutions were to default on its obligation to fund its commitment, the portion of the facility provided by such defaulting financial institution would not be available to us. Our financial performance could be adversely affected by our debt.

As of December 31, 2011, our total indebtedness was \$6.7 billion, and we had \$1.5 billion of available borrowing capacity under the Revolver portion of our Credit Facility, net of outstanding letters of credit. The indentures governing our Convertible Junior Subordinated Debentures (the Debentures) and the 7.375%, 7.875%, 6.50%, 6.25% and 6.00% Senior Notes (collectively our Senior Notes) do not limit the amount of indebtedness that we may issue. The degree to which we are leveraged could have important consequences, including, but not limited to:

- making it more difficult for us to pay interest and satisfy our debt obligations;
- increasing the costs of borrowing under our existing credit facilities;
- increasing our vulnerability to general adverse economic and industry conditions;
- requiring the dedication of a substantial portion of our cash flow from operations to the payment of principal and interest on our indebtedness, thereby reducing the availability of our cash flow to fund working capital, capital expenditures, business development, Btu Conversion and clean coal technology projects or other general corporate requirements;
- limiting our ability to obtain additional financing to fund future working capital, capital expenditures, business development, Btu Conversion and clean coal technology projects or other general corporate requirements;
- making it more difficult to obtain surety bonds, letters of credit or other financing, particularly during periods in which credit markets are weak;
- limiting our flexibility in planning for, or reacting to, changes in our business and in the coal industry;
- causing a decline in our credit ratings; and
- placing us at a competitive disadvantage compared to less leveraged competitors.

In addition, our debt agreements subject us to financial and other restrictive covenants. Failure by us to comply with these covenants could result in an event of default that, if not cured or waived, could have a material adverse effect on us and result in amounts outstanding thereunder to be immediately due and payable.

Table of Contents

Any downgrade in our credit ratings could result in an increase in interest rates on our credit facilities, requirements to post additional collateral on derivative trading instruments, or the loss of trading counterparties for corporate hedging and commodity brokerage and trading.

If our cash flows and capital resources are insufficient to fund our debt service obligations, we may be forced to sell assets, seek additional capital or seek to restructure or refinance our indebtedness. These alternative measures may not be successful and may not permit us to meet our scheduled debt service obligations. In the absence of such operating results and resources, we could face substantial liquidity problems and might be required to sell material assets or operations to attempt to meet our debt service and other obligations. Certain agreements governing our indebtedness restrict our ability to sell assets and use the proceeds from the sales. We may not be able to complete those sales or to obtain the proceeds which we could realize from them and these proceeds may not be adequate to meet any debt service obligations then due.

The covenants in our Credit Facility and 2011 Term Loan Facility, and the indentures governing our Senior Notes and Debentures impose restrictions that may limit our operating and financial flexibility.

Our Credit Facility, 2011 Term Loan Facility, the indentures governing our Senior Notes and our Debentures and the instruments governing our other indebtedness contain certain restrictions and covenants which restrict our ability to incur liens and/or debt or provide guarantees in respect of obligations of any other person. Under our Credit Facility, we must comply with certain financial covenants on a quarterly basis including a minimum interest coverage ratio and a maximum leverage ratio, as defined. The covenants also place limitations on our investments in joint ventures, unrestricted subsidiaries, indebtedness and the imposition of liens on our assets.

Operating results below current levels or other adverse factors, including a significant increase in interest rates, could result in our inability to comply with the financial covenants contained in our Credit Facility and 2011 Term Loan Facility. If we violate these covenants and are unable to obtain waivers from our lenders, our Credit Facility, our 2011 Term Loan Facility, our Senior Notes and our Debentures would be in default and the debt owing under such agreements could be accelerated. If our indebtedness is accelerated, we may not be able to repay our debt or borrow sufficient funds to refinance it. Even if we are able to obtain new financing, it may not be on commercially reasonable terms or on terms that are acceptable to us. If our debt is in default for any reason, our business, financial condition and results of operations could be materially and adversely affected. In addition, complying with these covenants may also cause us to take actions that are not favorable to holders of our other debt or equity securities and may make it more difficult for us to successfully execute our business strategy and compete against companies who are not subject to such restrictions.

The conversion of our Debentures may result in the dilution of the ownership interests of our existing stockholders. If the conditions permitting the conversion of our Debentures are met and holders of the Debentures exercise their conversion rights, any conversion value in excess of the principal amount will be delivered in shares of our common stock. If any common stock is issued in connection with a conversion of our Debentures, our existing stockholders will experience dilution in the voting power of their common stock.

Provisions of our Debentures could discourage an acquisition of us by a third-party.

Certain provisions of our Debentures could make it more difficult or more expensive for a third-party to acquire us. Upon the occurrence of certain transactions constituting a “change of control” as defined in the indenture relating to our Debentures, holders of our Debentures will have the right, at their option, to convert their Debentures and thereby require us to pay the principal amount of such Debentures in cash.

Other Business Risks

Under certain circumstances, we could be responsible for certain federal and state black lung occupational disease liabilities assumed by Patriot in connection with its 2007 spin-off from us.

Patriot is responsible for certain federal and state black lung occupational disease liabilities, which are expected to be less than \$150 million, as well as related credit capacity in support of these liabilities. Should Patriot not fund these obligations as they become due, we could be responsible for such costs when incurred.

Table of Contents

Our expenditures for postretirement benefit and pension obligations could be materially higher than we have predicted if our underlying assumptions prove to be incorrect.

We provide postretirement health and life insurance benefits to eligible union and non-union employees. We calculated the total accumulated postretirement benefit obligation, which was a liability of \$1,121.5 million as of December 31, 2011, \$68.4 million of which was a current liability. Net pension liabilities were \$194.0 million as of December 31, 2011, \$1.7 million of which was a current liability.

These liabilities are actuarially determined and we use various actuarial assumptions, including the discount rate and future cost trends, to estimate the costs and obligations for these items. Our discount rate is determined by utilizing a hypothetical bond portfolio model which approximates the future cash flows necessary to service our liabilities. We have made assumptions related to future trends for medical care costs in the estimates of retiree health care and work-related injuries and illnesses obligations. Our medical trend assumption is developed by annually examining the historical trend of our cost per claim data. In addition, we make assumptions related to rates of return on plan assets in the estimates of pension obligations. If our assumptions do not materialize as expected, actual cash expenditures and costs that we incur could differ materially from our current estimates. Moreover, regulatory changes or changes in medical benefits provided by the government could increase our obligation to satisfy these or additional obligations. In addition, a decrease in the discount rate used to determine pension obligations could result in an increase in the valuation of pension obligations, which could affect the reported funding status of our pension plans and future contributions, as well as the periodic pension cost in subsequent fiscal years. If we experience poor financial performance in asset markets in future years, we may be required to increase contributions.

Concerns about the environmental impacts of coal combustion, including perceived impacts on global climate issues, are resulting in increased regulation of coal combustion in many jurisdictions, and interest in further regulation, which could significantly affect demand for our products.

Global climate issues continue to attract public and scientific attention. Numerous reports, such as the Fourth Assessment Report of the Intergovernmental Panel on Climate Change, have also engendered concern about the impacts of human activity, especially fossil fuel combustion, on global climate issues. In turn, increasing government attention is being paid to global climate issues and to emissions of what are commonly referred to as greenhouse gases, including emissions of carbon dioxide from coal combustion by power plants.

Enactment of laws or passage of regulations regarding emissions from the combustion of coal by the U.S. or some of its states or by other countries, or other actions to limit such emissions, could result in electricity generators switching from coal to other fuel sources. The potential financial impact on us of future laws or regulations will depend upon the degree to which any such laws or regulations force electricity generators to diminish their reliance on coal as a fuel source. That, in turn, will depend on a number of factors, including the specific requirements imposed by any such laws or regulations, the time periods over which those laws or regulations would be phased in, the state of commercial development and deployment of CCS technologies. In view of the significant uncertainty surrounding each of these factors, it is not possible for us to reasonably predict the impact that any such laws or regulations may have on our results of operations, financial condition or cash flows.

Our certificate of incorporation and by-laws include provisions that may discourage a takeover attempt.

Provisions contained in our certificate of incorporation and by-laws and Delaware law could make it more difficult for a third-party to acquire us, even if doing so might be beneficial to our stockholders. Provisions of our by-laws and certificate of incorporation impose various procedural and other requirements that could make it more difficult for stockholders to effect certain corporate actions. For example, a change in control of our Company may be delayed or deterred as a result of the stockholders' rights plan adopted by our Board of Directors. These provisions could limit the price that certain investors might be willing to pay in the future for shares of our common stock and may have the effect of delaying or preventing a change in control.

Diversity in interpretation and application of accounting literature in the mining industry may impact our reported financial results.

The mining industry has limited industry-specific accounting literature and, as a result, we understand diversity in practice exists in the interpretation and application of accounting literature to mining specific issues. As diversity in mining industry accounting is addressed, we may need to restate our reported results if the resulting interpretations

differ from our current accounting practices.

Item 2. Properties.

Coal Reserves

We had an estimated 9.0 billion tons of proven and probable coal reserves as of December 31, 2011. An estimated 7.8 billion tons of our attributable proven and probable coal reserves are in the U.S. and 1.2 billion tons are in Australia. 32% of our Australian proven and probable coal reserves, or 380 million tons, are metallurgical coal with the remainder being thermal coal. 45% of our reserves, or 4.1 billion tons, are compliance coal and 55% are non-compliance coal (assuming application of the U.S. industry standard definition of compliance coal to all of our reserves). We own approximately 40% of these reserves and lease property containing the remaining 60%.

Compliance coal is defined by Phase II of the Clean Air Act as coal having sulfur dioxide content of 1.2 pounds or less per million Btu. Electricity generators are able to use coal that exceeds these specifications by using emissions reduction technology, using emission allowance credits or blending higher sulfur coal with lower sulfur coal.

Below is a table summarizing the locations and reserves of our major operating regions.

Operating Regions	Locations	Proven and Probable Reserves as of December 31, 2011 ⁽¹⁾		
		Owned Tons (Tons in millions)	Leased Tons	Total Tons
Midwest	Illinois, Indiana and Kentucky	2,719	926	3,645
Powder River Basin	Wyoming and Montana	67	2,791	2,858
Southwest	Arizona and New Mexico	805	274	1,079
Colorado	Colorado	46	182	228
Total United States		3,637	4,173	7,810
Australia	New South Wales	—	431	431
Australia	Queensland	—	770	770
Total Australia		—	1,201	1,201
Total Proven and Probable Coal Reserves		3,637	5,374	9,011

⁽¹⁾ Reserves have been adjusted to take into account estimated losses involved in producing a saleable product. Reserves are defined by SEC Industry Guide 7 as that part of a mineral deposit which could be economically and legally extracted or produced at the time of the reserve determination. Proven and probable coal reserves are defined by SEC Industry Guide 7 as follows:

Proven (Measured) Reserves — Reserves for which (a) quantity is computed from dimensions revealed in outcrops, trenches, workings or drill holes; grade and/or quality are computed from the results of detailed sampling and (b) the sites for inspection, sampling and measurement are spaced so close and the geographic character is so well defined that size, shape, depth and mineral content of reserves are well-established.

Table of Contents

Probable (Indicated) Reserves — Reserves for which quantity and grade and/or quality are computed from information similar to that used for proven (measured) reserves, but the sites for inspection, sampling and measurement are farther apart or are otherwise less adequately spaced. The degree of assurance, although lower than that for proven (measured) reserves, is high enough to assume continuity between points of observation.

Our estimates of proven and probable coal reserves are established within these guidelines. Proven reserves require the coal to lie within one-quarter mile of a valid point of measure or point of observation, such as exploratory drill holes or previously mined areas. Estimates of probable reserves may lie more than one-quarter mile, but less than three-quarters of a mile, from a point of thickness measurement. Estimates within the proven category have the highest degree of assurance, while estimates within the probable category have only a moderate degree of geologic assurance. Further exploration is necessary to place probable reserves into the proven reserve category. Our active properties generally have a much higher degree of reliability because of increased drilling density. Active surface reserves generally have points of observation as close as 330 feet to 660 feet.

Our reserve estimates are prepared by our staff of experienced geologists. We also have a chief geologist of reserve reporting whose primary responsibility is to track changes in reserve estimates, supervise our other geologists and coordinate periodic third-party reviews of our reserve estimates by qualified mining consultants.

Our reserve estimates are predicated on information obtained from our ongoing drilling program, which totals nearly 500,000 individual drill holes. We compile data from individual drill holes in a computerized drill-hole database from which the depth, thickness and, where core drilling is used, the quality of the coal is determined. The density of the drill pattern determines whether the reserves will be classified as proven or probable. The reserve estimates are then input into our computerized land management system, which overlays the geological data with data on ownership or control of the mineral and surface interests to determine the extent of our reserves in a given area. The land management system contains reserve information, including the quantity and quality (where available) of reserves as well as production rates, surface ownership, lease payments and other information relating to our coal reserves and land holdings. We periodically update our reserve estimates to reflect production of coal from the reserves and new drilling or other data received. Accordingly, reserve estimates will change from time to time to reflect mining activities, analysis of new engineering and geological data, changes in reserve holdings, modification of mining methods and other factors.

Our estimate of the economic recoverability of our reserves is based upon a comparison of unassigned reserves to assigned reserves currently in production in the same geologic setting to determine an estimated mining cost. These estimated mining costs are compared to expected market prices for the quality of coal expected to be mined and taking into consideration typical contractual sales agreements for the region and product. Where possible, we also review production by competitors in similar mining areas. Only reserves expected to be mined economically are included in our reserve estimates. Finally, our reserve estimates include reductions for recoverability factors to estimate a saleable product.

We periodically engage independent mining and geological consultants and consider their input regarding the procedures used by us to prepare our internal estimates of coal reserves, selected property reserve estimates and tabulation of reserve groups according to standard classifications of reliability.

With respect to the accuracy of our reserve estimates, our experience is that recovered reserves are within plus or minus 10% of our proven and probable estimates, on average, and our probable estimates are generally within the same statistical degree of accuracy when the necessary drilling is completed to move reserves from the probable to the proven classification.

We have numerous U.S. federal coal leases that are administered by the U.S. Department of the Interior under the Federal Coal Leasing Amendments Act of 1976. These leases cover our principal reserves in Wyoming and other reserves in Montana and Colorado. Each of these leases continues indefinitely, provided there is diligent development of the property and continued operation of the related mine or mines. The Bureau of Land Management has asserted the right to adjust the terms and conditions of these leases, including rent and royalties, after the first 20 years of their term and at 10-year intervals thereafter. Annual rents on surface land under our federal coal leases are now set at \$3.00 per acre. Production royalties on federal leases are set by statute at 12.5% of the gross proceeds of coal mined and sold

for surface-mined coal and 8% for underground-mined coal. The U.S. federal government limits by statute the amount of federal land that may be leased by any company and its affiliates at any time to 75,000 acres in any one state and 150,000 acres nationwide. As of December 31, 2011, we leased 11,536 acres of federal land in Colorado, 11,254 acres in Montana, 60,152 acres in Wyoming and 640 acres in New Mexico, for a total of 83,582 nationwide.

Similar provisions govern three coal leases with the Navajo and Hopi Indian tribes. These leases cover coal contained in 64,785 acres of land in northern Arizona lying within the boundaries of the Navajo Nation and Hopi Indian reservations. We also lease coal-mining properties from various state governments in the U.S.

Table of Contents

Private U.S. coal leases normally have terms of between 10 and 20 years and usually give us the right to renew the lease for a stated period or to maintain the lease in force until the exhaustion of mineable and merchantable coal contained on the relevant site. These private U.S. leases provide for royalties to be paid to the lessor either as a fixed amount per ton or as a percentage of the sales price. Many U.S. leases also require payment of a lease bonus or minimum royalty, payable either at the time of execution of the lease or in periodic installments. The terms of our private U.S. leases are normally extended by active production at or near the end of the lease term. U.S. leases containing undeveloped reserves may expire or these leases may be renewed periodically.

Mining and exploration in Australia is generally carried on under leases or licenses granted by state governments. Mining leases are typically for an initial term of up to 21 years (but which may be renewed) and contain conditions relating to such matters as minimum annual expenditures, restoration and rehabilitation. Royalties are paid to the state government as a percentage of the sales price. Generally landowners do not own the mineral rights or have the ability to grant rights to mine those minerals. These rights are retained by state governments. Compensation is payable to landowners for loss of access to the land, and the amount of compensation can be determined by agreement or arbitration. Surface rights are typically acquired directly from landowners and, in the absence of agreement, there is an arbitration provision in the mining law.

Consistent with industry practice, we conduct only limited investigation of title to our coal properties prior to leasing. Title to lands and reserves of the lessors or grantors and the boundaries of our leased properties are not completely verified until we prepare to mine those reserves.

With a portfolio of approximately 9.0 billion tons, we believe that we have sufficient reserves to replace capacity from depleting mines for the foreseeable future and that our significant reserve holdings is one of our strengths. We believe that the current level of production at our major mines is sustainable for the foreseeable future.

The following charts provide a summary, by mining complex, of production for the years ended December 31, 2011, 2010 and 2009, tonnage of coal reserves that is assigned to our operating mines, our property interest in those reserves and other characteristics of the facilities.

Table of Contents

- Compliance coal is defined by Phase II of the Clean Air Act as coal having sulfur dioxide content of 1.2 pounds or less per million Btu. Non-compliance coal is defined as coal having sulfur dioxide content in excess of this standard. Electricity generators are able to use coal that exceeds these specifications by using emissions reduction technology, using emissions allowance credits or blending higher sulfur coal with lower sulfur coal.
- As-received Btu per pound includes the weight of moisture in the coal on an as sold basis. The range of variability of the moisture content in coal across a given region may affect the actual shipped Btu content of current production from assigned reserves.
- Wambo includes the Wambo Open-Cut Mine and the North Wambo Underground Mine. The North Wambo Underground Mine produces both thermal and pulverized coal injection, or PCI metallurgical coal.
- Middlemount represents our 50.0% interest in Middlemount Coal Pty Ltd., which owns the Middlemount Mine in Queensland, Australia that was acquired as part of the Macarthur acquisition.
- Assigned reserves represent recoverable coal reserves that are controlled and accessible at active operations as of December 31, 2011. Unassigned reserves represent coal at currently non-producing locations that would require new mine development, mining equipment or plant facilities before operations could begin on the property.
- Unassigned reserves in Queensland includes approximately 198 million tons of reserves held for sale associated with our Wilkie Creek Mine.

Item 3. Legal Proceedings.

See Note 23 to our consolidated financial statements for a description of our pending legal proceedings, which is incorporated herein by reference.

Item 4. Mine Safety Disclosures.

Safety is a core value that is integrated into all areas of our business. Our goal is to provide a workplace that is incident free. We believe that it is our responsibility to employees to provide a safe and healthy work environment. We seek to implement this goal by: training employees in safe work practices; openly communicating with employees; establishing, following and improving safety standards; involving employees in safety processes; and recording, reporting and investigating accidents, incidents and losses to avoid recurrence. As part of our training, we collaborate with MSHA and other government agencies to identify and test emerging safety technologies. We also believe personal accountability is key; every employee commits to our safety goals and governing principles. Managers, frontline supervisors and employees are held responsible for their safety and the safety of other employees. We also partner with several companies and governmental agencies to pursue new technologies that have the potential to improve our safety performance and provide better safety protections for employees. We have installed communications and tracking systems at our U.S. underground mines, which allow persons on the surface to determine the location of and communicate with all persons underground. In addition, we are testing a proximity detection system at a section of one of our mines, which is designed to automatically stop mining equipment if a person is detected within the operating range of a continuous miner or coal hauler.

Table of Contents

The incidence rate is a measure of safety performance, which is tracked through our safety tracking system. The incidence rate is computed as the number of injuries, MSHA reportable injury degree codes 1 through 6, multiplied by 200,000, divided by employee hours worked [(number of reportable incidents X 200,000) ÷ employee hours worked]. Since MSHA is a branch of the U.S. Department of Labor, its jurisdiction applies only to our U.S. mines. However, we also track incidence rate for our Australian mines to measure safety performance on the same basis as our U.S. mines. The following table reflects our incidence rates (as of February 23, 2012) and the comparable MSHA incidence rates:

	Year Ended December 31,		
	2011	2010	2009
U.S.	1.37	1.98	2.16
Australia ⁽¹⁾	2.77	4.03	4.43
Total Peabody Energy Corporation ⁽¹⁾	1.92	2.71	2.92
MSHA (U.S. coal mines) ⁽²⁾	3.69	3.93	4.14

⁽¹⁾ Results exclude Macarthur for all periods presented. Macarthur's incidence rate for the acquisition date through December 31, 2011 was 1.54. Results for all periods presented include our Wilkie Creek Mine, which is held for sale as of December 31, 2011.

⁽²⁾ For the U.S., the comparable MSHA incidence rate is from MSHA's Mine Injury and Worktime Operators report and represents the all incidence rate for U.S. coal mines, excluding the impact of office workers ("All Incidence Rate"). The 2011 MSHA all incidence rate of 3.69 reflected above represents preliminary results for January-December 2011 (latest data available) as published by MSHA as of February 23, 2012.

We monitor MSHA compliance using violations per inspection day (in the U.S. only), which is calculated as the total count of violations per five hour MSHA inspector day. For the years ended December 31, 2011, 2010 and 2009, our U.S. violations per inspection day were 0.81, 0.84 and 1.11, respectively.

The historical incidence rates and violations per inspection day may be adjusted over time to reflect the final resolution of incidents, citations and orders by MSHA. The impact of these adjustments, which has not historically resulted in significant changes to the results originally reported, is reflected in the MSHA database. The MSHA incidence rates disclosed above reflect the rates in the MSHA Mine Injury and Worktime Operators report, which are not updated by MSHA once a final report has been issued.

The information concerning mine safety violations or other regulatory matters required by Section 1503(a) of the Dodd-Frank Act and Item 104 of Regulation S-K is included in Exhibit 95 to this Annual Report on Form 10-K.

Table of Contents

Executive Officers of the Company

Set forth below are the names, ages as of February 17, 2012 and current positions of our executive officers. Executive officers are appointed by, and hold office at the discretion of, our Board of Directors, subject to the terms of any employment agreements.

Name	Age	Position
Gregory H. Boyce	57	Chairman and Chief Executive Officer, Director
Richard A. Navarre	51	President and Chief Commercial Officer
Michael C. Crews	44	Executive Vice President and Chief Financial Officer
Sharon D. Fiehler	55	Executive Vice President and Chief Administrative Officer
Eric Ford	57	Executive Vice President and Chief Operating Officer
Jeane L. Hull	57	Executive Vice President - Technical Services
Alexander C. Schoch	57	Executive Vice President Law, Chief Legal Officer and Secretary

Gregory H. Boyce was elected Chairman of the Board on October 10, 2007 and has been a director of the Company since March 2005. He was named Chief Executive Officer Elect in March 2005, and assumed the position of Chief Executive Officer in January 2006. Mr. Boyce served as our President from October 2003 to December 2007 and as our Chief Operating Officer from October 2003 to December 2005. He previously served as Chief Executive - Energy of Rio Tinto plc (an international natural resource company) from 2000 to 2003. Other prior positions include President and Chief Executive Officer of Kennecott Energy Company from 1994 to 1999 and President of Kennecott Minerals Company from 1993 to 1994. He has extensive engineering and operating experience with Kennecott and also served as Executive Assistant to the Vice Chairman of Standard Oil of Ohio from 1983 to 1984. Mr. Boyce serves on the board of directors of Marathon Oil Corporation. He is Chairman of the National Mining Association and Deputy Chairman of the Coal Industry Advisory Board of the International Energy Agency. He is a member of the National Coal Council; The Business Council; Business Roundtable; the Board of Trustees of St. Louis Children's Hospital; the Board of Trustees of Washington University in St. Louis; and the Advisory Council of the University of Arizona's Department of Mining and Geological Engineering.

Richard A. Navarre is our President and Chief Commercial Officer. He previously served as our Executive Vice President of Corporate Development and Chief Financial Officer from July 2006 to January 2008 and as Chief Financial Officer from October 1999 to June 2008. Mr. Navarre is a member of the Hall of Fame of the College of Business at Southern Illinois University Carbondale; a member of the Board of Advisors of the College of Business and Administration and the School of Accountancy of Southern Illinois University Carbondale; a member of the Board of Directors of the Regional Chamber and Growth Association of St. Louis; and a member of the Foreign Policy Association. He is a Director of the United Way of Greater St. Louis; Vice Chair of CEOs Against Cancer; and a member of the Cardinal Glennon - Bob Costas Benefit Committee. He is Treasurer of the Missouri Historical Society; a member of Financial Executives International; and a former chairman of the Bituminous Coal Operators' Association.

Michael C. Crews was named our Executive Vice President and Chief Financial Officer in June 2008. He joined us in 1998 as Senior Manager of Financial Reporting, and has served as Assistant Corporate Controller, Director of Planning, Assistant Treasurer, Vice President of Planning, Analysis, and Performance Assessment, and Vice President of Operations Planning. Prior to joining us, Mr. Crews served for three years in financial positions with MEMC Electronic Materials, Inc. and six years at KPMG Peat Marwick in St. Louis. He serves on the Board of Directors of Action for Autism in St. Louis. Mr. Crews has a Bachelor of Science degree in Accountancy from the University of Missouri at Columbia, a Master of Business Administration (MBA) degree from Washington University in St. Louis and is a Certified Public Accountant in the state of Missouri.

Sharon D. Fiehler has been our Executive Vice President and Chief Administrative Officer since January 2008. From April 2002 to January 2008, she served as our Executive Vice President of Human Resources and Administration. Ms. Fiehler joined us in 1981 as Manager - Salary Administration and has held a series of employee relations, compensation and salaried benefits positions. She holds degrees in social work and psychology and a MBA, and prior to joining us was a personnel representative for Ford Motor Company. Ms. Fiehler is Deputy Chair and a Director of the Federal Reserve Bank of St. Louis; a member of the Board of Trustees of the Missouri Botanical Garden; Chair of the Board of Directors of Junior Achievement of Mississippi Valley, Inc.; a member of the Board of Directors of the St. Louis Zoo Association; and a member of the Chancellor's Council of the University of Missouri - St. Louis. She is also a member of the Missouri Women's Forum and the St. Louis Forum.

Table of Contents

Eric Ford was named our Executive Vice President and Chief Operating Officer in March 2007. Mr. Ford has 40 years of extensive international management, operating and engineering experience and, prior to joining us, most recently served as Chief Executive Officer of Anglo Coal Australia Pty Ltd. He joined Anglo Coal in 1971 and, after a series of increasingly complex operating assignments, was appointed President and Chief Executive Officer of Anglo American's joint venture coal mining operation in Colombia in 1998. In 2000, he returned to Anglo American Corporation as Executive Director of Operations for Anglo Platinum Corporation Limited. He was subsequently appointed Chief Executive Officer of Anglo Coal Australia Pty Ltd in 2001. Mr. Ford holds a Master of Science degree in Management Science from Imperial College in London and a Bachelor of Science degree in Mining Engineering (cum laude) from the University of the Witwatersrand in Johannesburg, South Africa. He serves on the board of directors of Compass Minerals International, Inc. Mr. Ford was previously Deputy Chairman and a member of the Executive Committee of the Coal Industry Advisory Board of the International Energy Agency, and Vice Chairman and Director of the Minerals Council of Australia.

Jeane L. Hull was named our Executive Vice President - Technical Services in March 2011. She joined us in March 2007 as the Senior Vice President of Engineering and Technical Services, and then served as Group Executive - Powder River Basin and Southwest from June 2008 to March 2011. Prior to joining us, Ms. Hull served as Chief Operating Officer of Kennecott Utah Copper, a subsidiary of Rio Tinto. She held numerous management, engineering and operations positions with Rio Tinto and affiliates and also spent 12 years with Mobil Mining and Minerals and Mobil Chemical Company. A registered professional engineer, Ms. Hull graduated from the South Dakota School of Mines and Technology with a Bachelor of Science degree in Civil Engineering. She holds a MBA from Nova University in Florida.

Alexander C. Schoch was named our Executive Vice President Law and Chief Legal Officer in October 2006 and our Secretary in May 2008. Prior to joining us, Mr. Schoch served as Vice President and General Counsel for Emerson Process Management, an operating segment of Emerson Electric Co. and a leading supplier of process-automation products, from August 2004 to October 2006. Mr. Schoch also served in several legal positions with Goodrich Corporation, a global supplier to the aerospace and defense industries, from 1987 to 2004, including Vice President, Associate General Counsel and Secretary. Prior to that, he worked for Marathon Oil Company as an attorney in its international exploration and production division. Mr. Schoch holds a Juris Doctorate from Case Western Reserve University in Ohio, as well as a Bachelor of Arts in Economics from Kenyon College in Ohio. He is admitted to practice law in several states, and is a member of the American and International Bar Associations. Mr. Schoch serves as a Trustee at Large on the Board of Trustees for the Energy & Mineral Law Foundation and on the Board of Directors of North Side Community School in St. Louis, Missouri.

PART II

Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities.

Our common stock is listed on the New York Stock Exchange, under the symbol "BTU". As of February 17, 2012, there were 1,386 holders of record of our common stock.

The table below sets forth the range of quarterly high and low sales prices (including intraday prices) for our common stock on the New York Stock Exchange during the calendar quarters indicated.

	Share Price		Dividends
	High	Low	Paid
2011			
First Quarter	\$73.73	\$57.44	\$0.085
Second Quarter	73.95	52.44	0.085
Third Quarter	61.85	33.84	0.085
Fourth Quarter	47.81	30.60	0.085
2010			

Edgar Filing: PEABODY ENERGY CORP - Form 10-K

First Quarter	\$52.14	\$39.88	\$0.070
Second Quarter	50.25	34.89	0.070
Third Quarter	49.94	38.08	0.070
Fourth Quarter	64.59	48.76	0.085

Table of Contents

Dividend Policy

We have declared and paid quarterly dividends since our initial public offering in 2001. Most recently, our Board of Directors declared a dividend of \$0.085 per share of Common Stock on January 26, 2012, payable on March 1, 2012, to stockholders of record on February 9, 2012. The declaration and payment of dividends and the amount of dividends will depend on our results of operations, financial condition, cash requirements, future prospects, any limitations imposed by our debt instruments and other factors deemed relevant by our Board of Directors. Limitations on our ability to pay dividends imposed by our debt instruments are discussed in Item 7. “Management’s Discussion and Analysis of Financial Condition and Results of Operations.”

Share Repurchases

On October 24, 2008, we announced that our Board of Directors authorized a share repurchase program of up to \$1 billion of the then outstanding shares of our common stock. While no such share repurchases were made in 2011, repurchases may be made from time to time based on an evaluation of our outlook and general business conditions, as well as alternative investment and debt repayment options. Our Chairman and Chief Executive Officer also has the authority to direct us to repurchase up to \$100 million of our common stock outside the share repurchase program. The share repurchase program does not have an expiration date and may be discontinued at any time. Through December 31, 2011, we have made repurchases of 7.7 million shares at a cost of \$299.6 million (\$199.8 million and \$99.8 million in 2008 and 2006, respectively), leaving \$700.4 million available for share repurchases under the share repurchase program.

The following table summarizes all share repurchases for the three months ended December 31, 2011:

Period	Total Number of Shares Purchased ⁽¹⁾	Average Price per Share	Total Number of Shares Purchased as Part of Publicly Announced Program	Maximum Dollar Value that May Yet Be Used to Repurchase Shares Under the Publicly Announced Program (In millions)
October 1 through October 31, 2011	52,685	\$45.27	—	\$700.4
November 1 through November 30, 2011	4,157	36.06	—	700.4
December 1 through December 31, 2011	—	—	—	700.4
Total	56,842	\$44.60	—	

(1) Represents shares withheld to cover the withholding taxes upon the vesting of restricted stock, which are not a part of the share repurchase program.

Item 6. Selected Financial Data.

The following table presents selected financial and other data about us for the most recent five fiscal years. The following table and the discussion of our results of operations in 2011, 2010 and 2009 in Item 7. “Management’s Discussion and Analysis of Financial Condition and Results of Operations” includes references to, and analysis of, our Adjusted EBITDA results. We define Adjusted EBITDA as income from continuing operations before deducting net interest expense, income taxes, asset retirement obligation expense and depreciation, depletion and amortization. Adjusted EBITDA is used by management to measure our segments’ operating performance, and management also believes it is a useful indicator of our ability to meet debt service and capital expenditure requirements. Because Adjusted EBITDA is not calculated identically by all companies, our calculation may not be comparable to similarly titled measures of other companies. Adjusted EBITDA is reconciled to its most comparable measure, under U.S. generally accepted accounting principles (GAAP), as reflected at the end of Item 6. “Selected Financial Data” and in Note 25 to our consolidated financial statements.

The selected financial data for all periods presented reflect the assets, liabilities and results of operations from subsidiaries spun off as Patriot as discontinued operations. We also have classified as discontinued operations those

operations recently divested, as well as certain non-strategic mining assets held for sale where we have committed to the divestiture of such assets.

Table of Contents

On October 26, 2011, we acquired Macarthur. Our results of operations include Macarthur's results of operations from the date of acquisition. Macarthur's results are reflected in our Australian Mining Segment. See Note 2 to our consolidated financial statements for additional details.

We have derived the selected historical financial data as of and for the years ended December 31, 2011, 2010, 2009, 2008 and 2007 from our audited financial statements. You should read the following table in conjunction with the financial statements, the related notes to those financial statements and Item 7. "Management's Discussion and Analysis of Financial Condition and Results of Operations."

The results of operations for the historical periods included in the following table are not necessarily indicative of the results to be expected for future periods. In addition, the Risk Factors section of Item 1A. "Risk Factors" of this report includes a discussion of risk factors that could impact our future results of operations.

	Year Ended December 31,				
	2011	2010	2009	2008	2007

Adjusted EBITDA	\$2,128.7	\$1,838.7	\$1,262.8	\$1,728.2	\$958.2

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations.

Overview

We are the world's largest private sector coal company. We own interests in 30 coal mining operations, including a majority interest in 29 coal operations located in the U.S. and Australia and a 50% equity interest in the Middlemount Mine in Australia. We also own an equity interest in a joint venture mining operation in Venezuela. In 2011, we produced 227.5 million tons of coal from continuing operations and sold 250.6 million tons of coal.

We conduct business through four principal segments: Western U.S. Mining, Midwestern U.S. Mining, Australian Mining and Trading and Brokerage. The principal business of the Western and Midwestern U.S. Mining segments is the mining, preparation and sale of thermal coal, sold primarily to electric utilities. Our Western U.S. Mining segment consist of our Powder River Basin, Southwest and Colorado operations. Our Midwestern U.S. Mining segment consist of our Illinois and Indiana operations. The business of our Australian Mining segment is the mining of various qualities of low-sulfur, high Btu coal (metallurgical coal) as well as thermal coal.

On October 26, 2011, we acquired Macarthur. Our results of operations include Macarthur's results of operations from the date of acquisition. Macarthur's results are reflected in our Australian Mining Segment.

In the U.S., we typically sell coal to utility customers under long-term contracts (those with terms longer than one year). Our Australia Mining operations are primarily export focused with customers spread across several countries, while a portion of our coal is sold to Australian steel producers and power generators. Generally, Australian revenues from individual countries vary year by year based on the demand for electricity, the demand for steel, the strength of the global economy and several other factors including those specific to each country. Historically in Australia Mining operations, we predominately entered into multi-year international coal agreements that contained provisions allowing either party to commence a renegotiation of the agreement price annually in the second quarter of each year. Current industry practice, and our practice, is to negotiate pricing for metallurgical coal contracts quarterly and seaborne thermal coal contracts annually.

During 2011, approximately 91% of our worldwide sales (by volume) were under long-term contracts. For the year ended December 31, 2011, 82% of our total sales (by volume) were to U.S. electricity generators, 15% were to customers outside the U.S. and 3% were to the U.S. industrial sector.

Our Trading and Brokerage segment's principal business is the brokering of coal sales of other producers both as principal and agent, and the trading of coal, freight and freight-related contracts. We also provide transportation-related services in support of our coal trading strategy, as well as hedging activities in support of our mining operations.

Our fifth segment, Corporate and Other, includes mining and export/transportation joint ventures, energy-related commercial activities, Btu Conversion activities, as well as the optimization of our coal reserve and real estate holdings.

To maximize our coal assets and land holdings for long-term growth, we are contributing to the development of coal-fueled generation, pursuing Btu Conversion projects that would convert coal to natural gas or transportation fuels and advancing clean coal technologies, including CCS.

Table of Contents

As discussed more fully in Item 1A. “Risk Factors,” our results of operations in the near-term could be negatively impacted by weather conditions, cost of competing fuels, availability of transportation for coal shipments, labor relations, unforeseen geologic conditions or equipment problems at mining locations and by the pace of the economic recovery. On a long-term basis, our results of operations could be impacted by our ability to secure or acquire high-quality coal reserves, find replacement buyers for coal under contracts with comparable terms to existing contracts or the passage of new or expanded regulations that could limit our ability to mine, increase our mining costs or limit our customers’ ability to utilize coal as fuel for electricity generation. In the past, we have achieved production levels that are relatively consistent with our projections. We may adjust our production levels in response to changes in market demand.

Year Ended December 31, 2011 Compared to Year Ended December 31, 2010

Summary

Global coal consumption rose to an estimated 7.7 billion tonnes in 2011 driven by increased coal use in China, India and other developing Asian nations. Global seaborne demand rose an estimated 6% and exceeded 1 billion tonnes, led by an increase in thermal demand to supply new coal-fueled electricity generation brought on line in 2011. Global steel production grew an estimated 7% while China and India's coal-fueled electricity generation rose 14% and 9%, respectively, in 2011.

In the U.S., coal markets have been impacted by a weak economy, low electricity generation and depressed near-term natural gas prices. U.S. coal electricity generation declined an estimated 6% in 2011 while U.S. coal exports increased 28% to an estimated 108 million tons.

Our revenues increased compared to the prior year by \$1,234.5 million and Segment Adjusted EBITDA increased over the prior year by \$372.8 million, led by higher average prices in all regions and increased volume in the U.S.

Income from continuing operations, net of income taxes, increased compared to the prior year by \$183.9 million due to the increase in Segment Adjusted EBITDA discussed above, partially offset by lower Corporate and Other Adjusted EBITDA and increased income taxes, depreciation, depletion and amortization, and interest expense.

We ended the year with total available liquidity of \$2.3 billion, as discussed further in “Liquidity and Capital Resources.”

Tons Sold

The following table presents tons sold by operating segment for the years ended December 31, 2011 and 2010:

	Year Ended December 31,		Increase (Decrease)		
	2011	2010	Tons	%	
	(Tons in millions)				
Western U.S. Mining	173.6	163.8	9.8	6.0	%
Midwestern U.S. Mining	30.3	29.7	0.6	2.0	%
Australian Mining	25.3	25.3	—	—	%
Trading and Brokerage	21.4	25.4	(4.0)	(15.7))%
Total tons sold	250.6	244.2	6.4	2.6	%

Table of Contents

Revenues

The following table presents revenues for the years ended December 31, 2011 and 2010:

	Year Ended December 31,		Increase (Decrease) to Revenues		
	2011	2010	\$	%	
	(Dollars in millions)				
Western U.S. Mining	\$2,900.4	\$2,706.3	\$194.1	7.2	%
Midwestern U.S. Mining	1,481.1	1,320.6	160.5	12.2	%
Australian Mining	3,080.7	2,399.9	680.8	28.4	%
Trading and Brokerage	475.1	291.1	184.0	63.2	%
Corporate and Other	37.1	22.0	15.1	68.6	%
Total revenues	\$7,974.4	\$6,739.9	\$1,234.5	18.3	%

The increase in Australian Mining operations' revenues compared to the prior year was driven by a higher weighted average sales price of 26.5%, led by increased pricing for seaborne metallurgical and thermal coal due to a combination of increased global coal demand and coal supply constraints resulting from weather impacts in early 2011. In 2011, Macarthur operations contributed revenues of \$152.9 million on 0.9 million tons sold. These favorable impacts were partially offset by lower metallurgical volumes due to a third quarter roof fall and recovery of longwall operations at our North Goonyella Mine and flooding in Queensland that began in late 2010 that lowered production and shipments in the first quarter of 2011. Metallurgical coal sales totaled 9.3 million tons in 2011 as compared to 9.8 million tons in 2010.

Western U.S. Mining operations' revenues were higher compared to the prior year as volumes and the weighted average sales price were above the prior year. The volume increase of 6.0% was led by increased shipments from our Powder River Basin region due to increased customer demand. Our weighted average sales price rose modestly compared to the prior year (1.2%) as favorable contract pricing in our Southwest region was partially offset by lower pricing in the Powder River Basin region due to a combination of sales mix and the expiration of some higher-priced, long-term contracts signed before the economic recession in the 2008 and 2009 timeframe.

Trading and Brokerage revenues were higher compared to the prior year due to an increase in export volumes, which carry higher prices, and higher overall coal market pricing on our brokerage activity, partially offset by lower domestic volumes.

In the Midwestern U.S. Mining segment, revenue improvements compared to the prior year were due to a higher weighted average sales price of 9.8% driven by favorable contracts signed in recent years. Volumes were also higher (2.0%) due to incremental contributions from our Bear Run Mine (which commenced operations in May 2010) and Wild Boar Mine (which commenced operations in December 2010).

Segment Adjusted EBITDA

The following table presents segment Adjusted EBITDA for the years ended December 31, 2011 and 2010:

	Year Ended December 31,		Increase (Decrease) to Segment Adjusted EBITDA		
	2011	2010	\$	%	
	(Dollars in millions)				
Western U.S. Mining	\$766.0	\$816.7	\$(50.7)	(6.2)	%)
Midwestern U.S. Mining	408.9	322.1	86.8	26.9	%
Australian Mining	1,194.3	977.4	216.9	22.2	%
Trading and Brokerage	197.0	77.2	119.8	155.2	%
Total Segment Adjusted EBITDA	\$2,566.2	\$2,193.4	\$372.8	17.0	%

Table of Contents

Australian Mining operations' Adjusted EBITDA increased compared to the prior year due to a higher weighted average sales price (\$742.6 million), partially offset by lower production and higher costs at our North Goonyella Mine due to a roof fall and recovery of longwall operations (\$234.7 million), an unfavorable foreign currency impact on operating costs, net of hedging (\$135.8 million), cost escalations for labor, materials and services (\$64.0 million), increased royalty expense associated with our higher-priced coal shipments (\$54.1 million) and lower volumes (\$38.1 million), excluding the impact of the North Goonyella roof fall discussed above.

Trading and Brokerage Adjusted EBITDA increased primarily due to higher margins on our brokerage activity due to higher prices as discussed above.

Midwestern U.S. Mining operations' Adjusted EBITDA increased compared to the prior year due to a higher weighted average sales price (\$112.5 million), partially offset by increased labor (\$17.7 million) and materials and services costs (\$12.4 million) related primarily to compliance measures at our underground mines.

Western U.S. Mining operations' Adjusted EBITDA decreased as compared to the prior year due to higher volume-driven labor (\$39.1 million) and materials and services costs (\$31.3 million), increased equipment repairs and maintenance costs (\$33.1 million), a provision related to litigation recorded in the second quarter of 2011 (\$24.5 million), and increased commodity costs, net of hedging (\$16.1 million). The above decreases to the segment's Adjusted EBITDA were partially offset by increased volumes (\$88.0 million) and a higher weighted average sales price (\$41.6 million) as discussed above.

Income From Continuing Operations Before Income Taxes

The following table presents income from continuing operations before income taxes for the years ended December 31, 2011 and 2010:

	Year Ended		Increase (Decrease)		
	December 31,		to Income		
	2011	2010	\$	%	
	(Dollars in millions)				
Total Segment Adjusted EBITDA	\$2,566.2	\$2,193.4	\$372.8	17.0	%
Corporate and Other Adjusted EBITDA ⁽¹⁾	(437.5)	(354.7)	(82.8)	23.3	%
Depreciation, depletion and amortization	(482.2)	(437.1)	(45.1)	10.3	%
Asset retirement obligation expense	(53.1)	(47.2)	(5.9)	12.5	%
Interest expense	(238.6)	(222.0)	(16.6)	7.5	%
Interest income	18.9	9.6	9.3	96.9	%
Income from continuing operations before income taxes	\$1,373.7	\$1,142.0	\$231.7	20.3	%

Corporate and Other Adjusted EBITDA results include selling and administrative expenses, equity income (loss) from our joint ventures, certain asset sales, resource management costs and revenues, coal royalty expense, costs associated with past mining activities, expenses related to our other commercial activities such as generation development and Btu Conversion costs and provisions for certain litigation.

Income from continuing operations before income taxes was greater than the prior year primarily due to the higher Total Segment Adjusted EBITDA discussed above, partially offset by lower Corporate and Other Adjusted EBITDA and increased depreciation, depletion and amortization, and interest expense.

Corporate and Other Adjusted EBITDA reflects higher expenses compared to the prior year due primarily to the following:

Higher current year expenses in support of our international expansion, acquisition activity and other growth initiatives, including \$85.2 million of expenses associated with the acquisition of Macarthur; and

Lower current year results from equity affiliates (\$17.5 million) due to current year losses associated with our joint venture arrangement in Australia (\$7.3 million) and earnings recognized in the prior year associated with transaction services related to our Mongolian joint venture (\$10.0 million); partially offset by

Increased gains on disposal or exchange of assets (\$46.9 million) driven by current year non-cash exchanges of coal reserves in Kentucky and coal reserves and surface lands in Illinois for coal reserves in West Virginia (\$37.7 million) and current year gains of \$31.7 million associated with sales of non-strategic coal reserves in Kentucky and Illinois, partially offset by prior year gains associated with non-cash exchanges of coal reserves in Kentucky and coal reserves

and surface lands in Illinois for coal reserves in West Virginia (\$23.7 million); and

Table of Contents

A current year gain associated with the receipt of a \$14.6 million project development fee related to our involvement in Prairie State.

Depreciation, depletion and amortization expense increased compared to the prior year primarily driven by additional expense associated with the assets acquired in the Macarthur acquisition.

Interest expense increased \$16.6 million over the prior year due primarily to current year acquisition related interest expense of \$45.3 million, which includes \$29.1 million of expense related to ongoing financing and \$16.2 million of expense for bridge financing, partially offset by costs in the prior year of \$9.3 million associated with the refinancing of our five-year Credit Facility and \$8.4 million of charges associated with the extinguishment of \$650.0 million of senior notes.

Net Income Attributable to Common Stockholders

The following table presents net income attributable to common stockholders for the years ended December 31, 2011 and 2010:

	Year Ended December 31,		Increase (Decrease) to Income		
	2011	2010	\$	%	
	(Dollars in millions)				
Income from continuing operations before income taxes	\$1,373.7	\$1,142.0	\$231.7	20.3	%
Income tax provision	363.2	315.4	47.8	15.2	%
Income from continuing operations, net of income taxes	1,010.5	826.6	183.9	22.2	%
Loss from discontinued operations, net of income taxes	(64.2)	(24.4)	(39.8)	163.1	%
Net income	946.3	802.2	144.1	18.0	%
Net (loss) income attributable to noncontrolling interests	(11.4)	28.2	(39.6)	(140.4)	%
Net income attributable to common stockholders	\$957.7	\$774.0	\$183.7	23.7	%

Net income attributable to common stockholders increased compared to the prior year due to the increased income from continuing operations before income taxes as discussed above.

The provision for income taxes increased compared to the prior year due to higher current year earnings (\$81.1 million), a change in valuation allowances (\$44.1 million) related primarily to alternative minimum tax credits released in the prior year and higher current year state income taxes (\$17.1 million). The increases to income tax expense were partially offset by lower current year foreign earnings repatriation expense (\$76.9 million) and a current year benefit of \$0.9 million associated with the remeasurement of non-U.S. tax accounts as compared to remeasurement expense of \$47.9 million in the prior year as the Australian exchange rate decreased against the U.S. dollar in the current year as compared to an increase in the prior year, as set forth in the table below.

	December 31,			Rate Change	
	2011	2010	2009	2011	2010
Australian dollar to U.S. dollar exchange rate	\$1.0156	\$1.0163	\$0.8969	\$(0.0007)	\$0.1194

Loss from discontinued operations for 2011 reflects a loss of \$64.2 million as compared to a loss of \$24.4 million in the prior year due primarily to higher current year losses associated with assets held for sale in our Australian Mining operations segment.

Net loss attributable to noncontrolling interests in the current year was driven by ArcelorMittal Mining Australasia B.V.'s interest in Macarthur from the acquisition and control date of October 26, 2011 to the date we acquired ArcelorMittal Mining Australasia B.V. on December 21, 2011.

Other

The net fair value of our foreign currency hedges decreased from an asset of \$640.1 million at December 31, 2010 to an asset of \$490.6 million at December 31, 2011 primarily due to the realization of hedge gains in 2011. This decrease is reflected in "Other current assets" and "Investments and other assets" in the consolidated balance sheets.

Table of Contents

The fair value of our coal trading positions, before the application of margin, designated as cash flow hedges of forecasted sales changed from a liability of \$174.2 million at December 31, 2010 to a liability of \$22.4 million at December 31, 2011 due to favorable market price movements on our positions held and realization of completed transactions.

Year Ended December 31, 2010 Compared to Year Ended December 31, 2009

Summary

In the U.S., demand for coal rose approximately 75 million tons in 2010, led by a 5.5% increase in coal-fueled generation and an 18 million ton rise in exports. The international coal markets strengthened in 2010 due to strong Asian demand growth and weather-related generation recovery in the Atlantic markets, coupled with supply challenges across the major coal exporting nations of the Southern Hemisphere. Our analyses of general business conditions indicate the following:

Seaborne coal demand increased an estimated 13% in 2010, led by a 32% recovery in global metallurgical coal demand;

Pacific thermal coal demand for electricity generation rose 15% in 2010, while the Atlantic market declined 10%;

Benchmark pricing of high quality, hard coking coal in the seaborne market has ranged between \$200 to \$225 per tonne from April to December 2010;

The benchmark prompt seaborne thermal coal price in Newcastle, Australia rose 34% in 2010;

U.S. coal generation accounted for nearly two-thirds of the growth in total power output in 2010 due to new coal-fueled generation, favorable weather, and a partial reversal of 2009's coal-to-gas switching; and

Indexed U.S. coal prices rose in 2010 in all regions, with increases ranging from 30 to 50%.

Our 2010 revenues increased compared to 2009 by \$892.9 million and Segment Adjusted EBITDA increased over 2009 by \$586.1 million, led by higher Australian pricing and sales volumes in 2010 despite unfavorable weather-related volume impacts that occurred late in 2010.

Income from continuing operations, net of income taxes, increased compared to 2009 by \$383.4 million due to the increase in Segment Adjusted EBITDA discussed above, partially offset by increased income taxes, decreased Corporate and Other Adjusted EBITDA, and increased depreciation, depletion and amortization and interest expense. We ended 2010 with total available liquidity of \$2.7 billion, as discussed further in "Liquidity and Capital Resources."

Tons Sold

The following table presents tons sold by operating segment for the years ended December 31, 2010 and 2009:

	Year Ended December 31,		Increase (Decrease)		
	2010	2009	Tons	%	
			(Tons in millions)		
Western U.S. Mining	163.8	160.1	3.7	2.3	%
Midwestern U.S. Mining	29.7	31.8	(2.1)	(6.6))%
Australian Mining	25.3	20.0	5.3	26.5	%
Trading and Brokerage	25.4	29.4	(4.0)	(13.6))%
Total tons sold	244.2	241.3	2.9	1.2	%

Table of Contents

Revenues

The following table presents revenues for the years ended December 31, 2010 and 2009:

	Year Ended December 31,		Increase (Decrease) to Revenues		
	2010	2009	\$	%	
	(Dollars in millions)				
Western U.S. Mining	\$2,706.3	\$2,612.6	\$93.7	3.6	%
Midwestern U.S. Mining	1,320.6	1,303.8	16.8	1.3	%
Australian Mining	2,399.9	1,512.6	887.3	58.7	%
Trading and Brokerage	291.1	391.0	(99.9)	(25.5))%
Corporate and Other	22.0	27.0	(5.0)	(18.5))%
Total revenues	\$6,739.9	\$5,847.0	\$892.9	15.3	%

The increase in Australian Mining operations' revenues was driven by a higher weighted average sales price of 25.4%, led by increased pricing on seaborne metallurgical and thermal coals and a higher mix of metallurgical coal shipments. Volumes also increased in 2010 (26.5%) driven by increased demand for metallurgical coal (metallurgical coal shipments of 9.8 million tons were 2.9 million tons, or 42.0%, greater than 2009). These increases were muted to an extent by the flooding in Queensland in late 2010 that negatively impacted our production and also restricted throughput due to damage to the port and rail systems. The metallurgical coal demand increase reflects the strengthening of the coal markets as discussed above, coupled with 2009 customer destocking of inventory and lower capacity utilization at steel customers.

Western U.S. Mining operations' revenues increased compared to 2009 due to increased sales volume (2.3%) driven by our Powder River Basin and Southwest regions due to increased customer demand and a higher weighted average sales price of 1.3%.

In the Midwestern U.S. Mining segment, revenue improvements due to an increase in our weighted average sales price of 8.4% from contractual price increases were largely offset by decreased shipments (6.6%) on lower customer demand.

Trading and Brokerage revenues were down primarily due to lower international brokerage revenues, unfavorable market movements on freight positions that support our export volumes and weather related shipment deferrals.

Segment Adjusted EBITDA

The following table presents segment Adjusted EBITDA for the years ended December 31, 2010 and 2009:

	Year Ended December 31,		Increase (Decrease) to Segment Adjusted EBITDA		
	2010	2009	\$	%	
	(Dollars in millions)				
Western U.S. Mining	\$816.7	\$721.5	\$95.2	13.2	%
Midwestern U.S. Mining	322.1	281.9	40.2	14.3	%
Australian Mining	977.4	410.5	566.9	138.1	%
Trading and Brokerage	77.2	193.4	(116.2)	(60.1))%
Total Segment Adjusted EBITDA	\$2,193.4	\$1,607.3	\$586.1	36.5	%

Our Australian Mining segment benefited from a higher weighted average sales price (\$408.3 million) and increased volumes (\$134.0 million) as discussed above, and productivity improvements at our North Goonyella and Wambo underground mines along with fewer longwall move days in 2010 (\$116.0 million). Partially offsetting the above improvements were net higher adverse weather impacts driven by the flooding in late 2010, unfavorable foreign currency impact on operating costs, net of hedging (\$34.5 million), increased royalty expense associated with our higher-priced metallurgical coal shipments (\$31.7 million) and increased demurrage costs (\$10.7 million).

Table of Contents

Western U.S. Mining operations' Adjusted EBITDA increased compared to 2009 due to the higher volumes (\$49.8 million) and a higher weighted average sales price (\$42.1 million) discussed above, lower repairs and maintenance costs due to timing of repairs and improved equipment efficiency (\$35.0 million) and fewer longwall move days at our Twentymile Mine in 2010 (\$10.0 million), partially offset by 2009 customer contract termination and restructuring agreements (\$27.8 million) and increased commodity costs in the 2010 (\$20.8 million).

In the Midwestern U.S. Mining segment, a higher weighted average sales price (\$98.5 million), as discussed above, was partially offset by lower volumes (\$42.3 million) due to decreased demand and increased costs on lower productivity due to compliance measures and geological conditions at certain underground mines.

Our Trading and Brokerage segment was down primarily due to the lower revenues as discussed above.

Income From Continuing Operations Before Income Taxes

The following table presents income from continuing operations before income taxes for the years ended December 31, 2010 and 2009:

	Year Ended		Increase (Decrease)		
	December 31,		to Income		
	2010	2009	\$	%	
	(Dollars in millions)				
Total Segment Adjusted EBITDA	\$2,193.4	\$1,607.3	\$586.1	36.5	%
Corporate and Other Adjusted EBITDA ⁽¹⁾	(354.7)	(344.5)	(10.2)	3.0	%
Depreciation, depletion and amortization	(437.1)	(400.5)	(36.6)	9.1	%
Asset retirement obligation expense	(47.2)	(39.9)	(7.3)	18.3	%
Interest expense	(222.0)	(201.1)	(20.9)	10.4	%
Interest income	9.6	8.1	1.5	18.5	%
Income from continuing operations before income taxes	\$1,142.0	\$629.4	\$512.6	81.4	%

Corporate and Other Adjusted EBITDA results include selling and administrative expenses, equity income (loss) from our joint ventures, certain asset sales, resource management costs and revenue, coal royalty expense, costs associated with past mining obligations, expenses related to our other commercial activities such as generation development and Btu Conversion costs and provision for certain litigation.

Income from continuing operations before income taxes was higher compared to 2009 primarily due to the higher Total Segment Adjusted EBITDA discussed above, partially offset by lower Corporate and Other Adjusted EBITDA and higher depreciation, depletion and amortization expense and interest expense as discussed below:

Corporate and Other Adjusted EBITDA: higher expense was primarily driven by an increase in selling and administrative expenses due to costs to support our business development and international expansion (e.g. headcount, travel, professional services, legal). We also incurred increased post mining costs driven by higher retiree healthcare amortization of actuarial losses and interest cost. These items were partially offset by improved results from equity affiliates primarily due to 2009 losses of \$54.6 million related to our equity investment in Carbones del Guasare, which included a \$34.7 million impairment loss and \$19.9 million of operating losses. See Note 1 to our consolidated financial statements for additional information.

Depreciation, depletion and amortization: higher compared to 2009 due to increased production at our Australian mines with higher per-ton depletion rates reflecting higher demand and additional depreciation expense associated with our new Bear Run Mine (commissioned in the second quarter of 2010).

Interest expense: higher primarily due to refinancing charges (\$9.3 million) associated with our new five-year Credit Facility and charges (\$8.4 million) associated with the extinguishment and refinancing of \$650.0 million of senior notes.

Table of Contents

Net Income Attributable to Common Stockholders

The following table presents net income attributable to common stockholders for the years ended December 31, 2010 and 2009:

	Year Ended December 31,		Increase (Decrease) to Income		
	2010	2009	\$	%	
	(Dollars in millions)				
Income from continuing operations before income taxes	\$1,142.0	\$629.4	\$512.6	81.4	%
Income tax provision	315.4	186.2	129.2	69.4	%
Income from continuing operations, net of income taxes	826.6	443.2	383.4	86.5	%
(Loss) income from discontinued operations, net of income taxes	(24.4)	19.8	(44.2)	(223.2))%
Net income	802.2	463.0	339.2	73.3	%
Net income attributable to noncontrolling interests	28.2	14.8	13.4	90.5	%
Net income attributable to common stockholders	\$774.0	\$448.2	\$325.8	72.7	%

Net income attributable to common stockholders increased compared to 2009 due to the increased income from continuing operations before income taxes as discussed above.

Income tax provision was impacted by the following:

Increased expense due to higher earnings (\$179.4 million) and income tax resulting from foreign earnings repatriation (\$84.5 million), partially offset by

A change in the valuation allowance (\$46.0 million) related primarily to alternative minimum tax credits, lower expense associated with the remeasurement of non-U.S. tax accounts as a result of the larger increase in the Australian exchange rate against the U.S. dollar in 2009 compared to 2010 (\$26.5 million) as set forth in the table below, the favorable rate difference resulting from higher foreign generated income in 2010 (\$41.1 million), and lower expense in 2010 due to the reduction of our gross unrecognized tax benefit resulting from the completion of the Internal Revenue Service examination of the 2005 federal income tax year (\$15.2 million).

	December 31,			Rate Change	
	2010	2009	2008	2010	2009
Australian dollar to U.S. dollar exchange rate	\$1.0163	\$0.8969	\$0.6928	\$0.1194	\$0.2041

(Loss) income from discontinued operations for 2010 reflects a loss of \$24.4 million as compared to income of \$19.8 million in 2009. 2010 and 2009 includes results of operations related to assets held for sale in Australia and the Midwestern U.S. 2009 also includes a coal excise tax refund receivable of approximately \$35 million recorded in 2009 and a \$10.0 million loss on disposal of our Australian Chain Valley Mine.

Other

The net fair value of our foreign currency hedges increased approximately \$434 million in 2010 mostly due to the strengthening of the Australian dollar against the U.S. dollar. The increase is reflected in "Other current assets" and "Investments and other assets" in the consolidated balance sheets.

Outlook

Our near-term outlook is intended to address the next 12-24 months, with any subsequent periods addressed in our long-term outlook.

Table of Contents

Near-Term Outlook

Global coal consumption rose in 2011 to an estimated 7.7 billion tonnes, driven by increased coal use in China, India and other developing Asian nations. Global seaborne demand rose an estimated 6% and exceeded 1 billion tonnes, led by an increase in thermal demand to supply approximately 81 gigawatts of new coal-fueled electricity generation brought on line in 2011. In the U.S., coal markets have been marked by a weak economy, low electricity generation and depressed near-term natural gas prices. U.S. coal electricity generation declined an estimated 6% in 2011 driven by more mild weather as compared to the prior year as well as some displacement from hydro and natural gas, while U.S. coal exports increased 28% to an estimated 108 million tons.

The International Monetary Fund's January 2012 World Economic Outlook estimates global economic activity, as measured by gross domestic product (GDP), will grow 3.3% in 2012 and 3.9% in 2013, led by China and India.

China's GDP is projected to grow 8.2% in 2012 and 8.8% in 2013. India, the world's second fastest growing economy, is projected to grow 7.0% in 2012 and 7.3% in 2013.

According to the World Steel Association, global steel use is expected to increase 5.4% in 2012, with China expected to grow its steel use by 6.0%.

Prices for global seaborne metallurgical and thermal coal have come down from record highs during 2011, though recent settlements have still been higher than historical averages. Metallurgical coal prices for high quality hard coking coal and LV PCI settled at \$235 and \$171 per tonne, respectively, for quarterly contracts commencing January 2012. We have settled first quarter metallurgical coal shipments in line with these recent settlements, with essentially all remaining 2012 metallurgical coal production unpriced. We expect near-term macroeconomic movements to dictate quarterly pricing for the remainder of 2012 and we are targeting total 2012 metallurgical coal sales of approximately 14 to 15 million tons.

Seaborne thermal coal originating from Newcastle, Australia, has been settled for annual contracts beginning in January 2012 at \$116 per tonne. As of January 24, 2012, we had 40% to 50% of 2012 seaborne thermal coal volumes available for pricing in Australia and we are targeting 2012 Australian thermal exports of 12 to 13 million tons.

Looking at U.S. markets, the Energy Information Administration's (EIA) February 2012 Short-Term Energy Outlook projects 2012 U.S. electric power coal consumption to decline by approximately 2%. U.S. coal production is also expected to decline by 2%, despite slight production expansion in the Western region. U.S. producers will look to increase exports as domestic markets remain weak relative to historic levels and global seaborne thermal markets provide growing sales opportunities.

The coal-fueled electric power generation decline in 2012 is projected to be primarily driven by depressed near-term natural gas prices that are resulting in elevated levels of coal-to-gas switching, with the largest impact projected to be on Central Appalachian coal supply. If coal-to-gas switching lasts for a prolonged period during 2012 due to significantly depressed natural gas prices, there may be more substantial unfavorable impacts to all coal supply regions, including the Powder River Basin. We continually adjust our production levels in response to changes in market demand.

We are targeting our U.S. volumes in 2012 to be on par with prior year levels and are fully committed on pricing. As of January 24, 2012, we had 45% to 55% of planned U.S. production unpriced for 2013. As a result of the current weak U.S. coal market environment, some customers may attempt to delay and/or cancel portions of contracted 2012 volumes. Our coal supply agreement contractual terms and conditions provide support for us to seek full performance from all customers. In selected cases, we may elect to reach agreement with customers on monetary settlements and/or contract extensions for 2013 and beyond in exchange for relief on 2012 volumes.

Macarthur is expected to contribute less than \$100 million of EBITDA in 2012 given the significant cost increases necessary to correct overburden deficiencies at the Coppabella Mine and to complete major repairs at both the Coppabella and Moorvale mines that had been deferred under previous management. We expect that these expenditures will allow us to enter 2013 with a solid foundation for higher productivity, lower costs, and improved financial performance. In addition, we expect to incur increased depreciation, depletion and amortization expense in 2012 and beyond driven by a higher average depletion rate associated with the acquisition of Macarthur. As discussed in "Liquidity and Capital Resources" our debt service cost will also increase as a result of the debt incurred to fund the acquisition of Macarthur.

Table of Contents

We continue to manage costs and operating performance in an effort to mitigate external cost pressures, geologic issues and potential shipping delays resulting from adverse port and rail performance. We may have higher per ton costs as a result of suboptimal production levels due to market-driven changes in demand. We may also encounter poor geologic conditions, lower third-party contract miner or brokerage performance or unforeseen equipment problems that limit our ability to produce at forecasted levels. To the extent upward pressure on costs exceeds our ability to realize sales increases, or if we experience unanticipated operating or transportation difficulties, our operating margins would be negatively impacted. Reductions in the relative cost of other fuels, including natural gas, could impact the use of coal for electricity generation. See Cautionary Notice Regarding Forward-Looking Statements and Item 1A. "Risk Factors" of this report for additional considerations regarding our outlook.

Dodd-Frank Act. On July 21, 2010, the Dodd-Frank Act was enacted, which includes a number of provisions applicable to us in the areas of corporate governance, executive compensation and mine safety and extractive industries disclosure. In addition, the Dodd-Frank Act imposes additional regulation of financial derivatives transactions that may apply to our hedging and our Trading and Brokerage activities. Although the Dodd-Frank Act generally became effective upon its enactment, many provisions have extended implementation periods and delayed effective dates and require further action by the federal regulatory authorities. As a result, the ultimate impact of the Dodd-Frank Act on us will not be fully known for an extended period of time. We do expect that the Dodd-Frank Act will increase compliance and transaction costs associated with our hedging and Trading and Brokerage activities.

European Union Derivatives Regulation. In October 2011, the European Commission adopted proposals to revise its directive on markets in financial instruments (MiFID) and to enact a new regulation on markets in financial instruments (MiFIR). These proposals, which are currently under negotiation by the European Commission, European Council and European Parliament, will likely impose additional regulation of financial derivatives transactions that may apply to our hedging and our Trading and Brokerage activities. While the ultimate impact of these proposals will not be known for some time, we do expect that they will increase compliance and transaction costs associated with our hedging and our Trading and Brokerage activities.

Minerals Resource Rent Tax. On May 2, 2010, the Australian government released a report on Australia's Future Tax System, which included a recommendation to replace the current resource taxing arrangements imposed on non-renewable resources by the Australian federal and state governments with a super profit resource rent tax (the Resource Tax) imposed and administered by the Australian government. As proposed, the Resource Tax would be profit-based and would apply to non-renewable resources projects, including existing projects. On July 2, 2010, the Australian government announced changes to the Resource Tax and proposed a new minerals resource rent tax (the MRRT). The MRRT would still be profit-based, but measures were introduced to lessen the impact of the MRRT. The Australian government and major industry policy makers are actively engaged to work through various structural aspects of the proposed MRRT together with detailed implementation issues. A committee charged with consulting with industry and preparing recommendations as to the final form of the MRRT submitted its report in late December 2010. That committee's recommendations largely endorsed the mining industry's understanding as to what was agreed with the federal government prior to the federal election. In March 2011, those recommendations were accepted by the federal government, which included the recommendation that all state royalties (current and future) are creditable against MRRT payments. An implementation group was formed, which included industry participants, to assist with drafting the legislation. Draft legislation and an accompanying explanatory memorandum was released for public consultation on June 7, 2011. The final exposure draft was released for further consultation on September 16, 2011 with legislation formally submitted to the House of Representatives in November 2011. The legislation was referred to the Senate Economics Legislation Committee on November 21, 2011 with the committee due to report back to the Senate on March 14, 2012. If the MRRT becomes law, the MRRT will apply to mining profits attributable to the value of resources earned after July 1, 2012 and may affect the level of taxation incurred by our Australian operations going forward.

Carbon Pricing Framework. In the fourth quarter of 2011, the Australian government passed a legislative package that included a carbon pricing framework that commences July 1, 2012. The carbon price will initially be \$23.00 Australian dollars per tonne of carbon dioxide equivalent emissions, escalated by 2.5% per year for inflation over a

three year period. After June 30, 2015, the carbon price mechanism will transition to an emissions trading scheme. We believe that all of our Australian operations will be impacted by the fugitive emissions portion of the framework (defined as the methane and carbon dioxide which escapes into the atmosphere when coal is mined and gas is produced), which we estimate will initially average \$2.00 to \$3.25 Australian dollars per tonne of coal produced annually. Actual results will be dependent upon the volume of tons produced at each of our mining locations as the impact per tonne at our surface mines will generally be less than the impact per tonne at our underground mines. In addition, our Australian mines will be impacted by the phased reduction of the government's diesel fuel rebate to capture emissions from fuel combustion. Our North Goonyella, Wambo and Metropolitan mines will be eligible to apply for a portion of the government's approximately \$1.3 billion Australian dollars of transition benefits that would provide assistance based on historical emissions intensity data to the most emissions-intensive coal mines over a six-year period.

Table of Contents

Cross-State Air Pollution Rule (CSAPR). On July 6, 2011, the U.S. EPA finalized CSAPR, which requires 28 states from Texas eastward (not including the New England states or Delaware) to significantly improve air quality by reducing power plant emissions that cross state lines and contribute to ozone and/or fine particle pollution in other states. The CSAPR is one of a number of significant regulations that the EPA has issued or expects to issue that will impose more stringent requirements relating to air, water and waste controls on electric generating units. Under the CSAPR, the first phase of the nitrogen oxide and sulfur dioxide emissions reductions would commence in 2012 with further reductions effective in 2014. In October 2011, the EPA proposed amendments to the CSAPR to increase emission budgets in ten states, including Texas, and ease limits on market-based compliance options. While CSAPR had an initial compliance deadline of January 1, 2012, the rule was challenged and on December 30, 2011, the U.S. Court of Appeals for the District of Columbia stayed CSAPR and advised that the EPA is expected to continue administering CAIR until the pending challenges are resolved. Expedited briefing on the merits of the challenge is underway. We continue to evaluate the possible scenarios associated with the CSAPR and the impacts it may have on our business and our results of operations, financial condition or cash flows.

Long-Term Outlook

Our long-term global outlook remains positive. According to the BP Statistical Review of World Energy 2011, coal has been the fastest-growing fuel in the world for the past decade.

The International Energy Agency (IEA) estimates in its World Energy Outlook 2011, current policies scenario, that world primary energy demand will grow 51% between 2009 and 2035. Demand for coal is projected to rise 65%, and the growth in global electricity generation from coal is expected to be greater than the growth in oil, natural gas, nuclear, hydro, biomass, geothermal and solar combined. China and India account for more than 75% of the 2009 - 2035 coal-based primary energy demand growth.

Under the current policies scenario, the IEA expects coal to retain its strong presence as a fuel for the power sector worldwide. Coal's share of the power generation mix was 47% in 2009. By 2035, the IEA estimates coal's fuel share of power generation to be 49% as it continues to have the largest share of worldwide electric power production. According to industry reports, approximately 370 gigawatts of coal-fueled electricity generating plants are currently planned or under construction around the world with expected completion between 2012 and 2016. Based on those estimates, when complete, those plants would require an estimated 1.2 billion tonnes of coal annually. In the U.S., while coal-based plant retirements are expected, the EIA is projecting coal demand to remain relatively constant through 2015.

The IEA projects that global natural gas-fueled electricity generation will have a compound annual growth rate of 2.7%, from 4.3 trillion kilowatt hours in 2009 to 8.7 trillion kilowatt hours in 2035. The total amount of electricity generated from natural gas is expected to be approximately one-half the total for coal, even in 2035. Renewables are projected to comprise 23% of the 2035 fuel mix versus 19% in 2009. Nuclear power is expected to grow 50%, however its share of total generation is expected to fall from 13.5% to 10% between 2009 and 2035. The recent events in Japan and Germany may impact these projections. Generation from liquid fuels is projected to decline an average of 2.1% annually to 1.5% of the 2035 generation mix.

We believe that Btu Conversion applications such as coal-to-gas (CTG) and CTL plants represent an avenue for potential long-term industry growth. Several CTG and CTL facilities are currently under development in China and India.

We continue to support clean coal technology development toward the ultimate goal of near-zero emissions, and we are advancing more than a dozen projects and partnerships in the U.S., China and Australia. Clean coal technology development in the U.S. has funding earmarked under the American Recovery and Reinvestment Act of 2009. In addition, the Interagency Task Force on Carbon Capture and Storage was formed to develop a comprehensive and coordinated federal strategy surrounding the commercial development of commercial carbon capture and storage projects. Our work in new or recently commercialized technologies could expose us to unanticipated risks, evolving legislation and uncertainty regarding the extent of future government support and funding.

Our long-term plans also include advancing projects to expand our presence in the Asia-Pacific region, some of which include sourcing coal to be sold through our Trading and Brokerage segment and partnerships to utilize our mining experience for joint mine development. In July 2011, we entered into a framework agreement to pursue development

of a 50 million-ton-per-year surface mine in Xinjiang, China. Also in July 2011, we were selected to be part of a consortium to develop the Tavan Tolgoi coking coal reserve in the South Gobi region of Mongolia. The Government of Mongolia continues to evaluate the structure and components of the mine development, and we are negotiating with other parties and the Government of Mongolia regarding long-term agreements related to the project. Any agreements would then be submitted for consideration and approval by government agencies and the Parliament of Mongolia.

Table of Contents

Enactment of laws or passage of regulations regarding emissions from the combustion of coal by the U.S. or some of its states or by other countries, or other actions to limit such emissions, could result in electricity generators switching from coal to other fuel sources. The potential financial impact on us of future laws or regulations will depend upon the degree to which any such laws or regulations force electricity generators to diminish their reliance on coal as a fuel source. That, in turn, will depend on a number of factors, including the specific requirements imposed by any such laws or regulations, the time periods over which those laws or regulations would be phased in, the state of commercial development and deployment of CCS technologies and the alternative markets for coal. In view of the significant uncertainty surrounding each of these factors, it is not possible for us to reasonably predict the impact that any such laws or regulations may have on our results of operations, financial condition or cash flows.

Liquidity and Capital Resources

Capital Resources

Our primary sources of cash are the sales of our coal production to customers and from the cash generated from our trading and brokerage activities. To a lesser extent, we also generate cash from the sale of non-strategic coal reserves and surface land and from financing transactions. Along with cash and cash equivalents, our liquidity includes the available balances from our Revolver under our Credit Facility, an accounts receivable securitization program and a bank overdraft facility in Australia. Our available liquidity as of December 31, 2011 was \$2.3 billion, which included cash and cash equivalents of \$0.8 billion, \$1.5 billion available for borrowing under the Revolver, net of outstanding letters of credit of \$21.0 million, and available capacity under our accounts receivable securitization program of \$41.7 million, net of outstanding letters of credit and amounts drawn. Our liquidity is also impacted by activity under certain bilateral cash collateralization arrangements.

We assumed Macarthur's three year \$330.0 million Australian dollar Corporate Funding Facility (Macarthur Corporate Funding Facility) as part of the acquisition that has a maturity date of November 30, 2013. As of December 31, 2011, we had no borrowings under the Macarthur Corporate Funding Facility. The Macarthur Corporate Funding Facility has a \$130.0 million Australian dollar sub-limit for bank guarantees, leaving an available capacity of \$200.0 million Australian dollars at December 31, 2011. Letters of credit and cash-backed bank guarantees totaling \$65.0 million Australian dollars were outstanding as of December 31, 2011. We plan to terminate the Macarthur Corporate Funding Facility in 2012.

As of December 31, 2011, approximately \$284 million of our cash was held in the U.S. with approximately \$515 million held by foreign subsidiaries, primarily those in our Australia Mining segment. Nearly all of the cash held by our foreign subsidiaries is denominated in U.S. dollars and is subject to additional U.S. income taxes if repatriated. The cash held in Australia is currently expected to be used to fund, in part, our organic growth projects, sustaining capital expenditures and existing operations.

We currently expect that our available liquidity and cash flow from operations will be sufficient to meet our anticipated capital requirements during the next 12 months and for the foreseeable future. In addition to the above, alternative sources of liquidity include our ability to offer and sell securities under our shelf registration statement on file with the SEC.

Capital Requirements

Our primary uses of cash include the cash costs of coal production, capital expenditures, coal reserve lease and royalty payments, debt service costs (interest and principal), lease obligations, take or pay obligations and costs related to past mining obligations. When in compliance with the financial covenants and customary default provisions of our Credit Facility and 2011 Term Loan Facility, we are not restricted in our ability to pay dividends or repurchase capital stock provided that we may only redeem and repurchase capital stock with the proceeds received from the concurrent issue of capital stock or indebtedness permitted under the Credit Facility and 2011 Term Loan Facility.

Capital Expenditures. Capital expenditures for 2012 are anticipated to be \$1.2 to \$1.4 billion. Approximately \$800 to \$950 million is earmarked for growth projects that encompass future mine development, as well as the expansion and extension of existing mines, with much of the remaining allocated to sustaining capital expenditures for existing operations. The increase in planned capital expenditures for 2012 compared to 2011 is due to the continued

advancement of multiple organic growth projects at our Millennium, Metropolitan and Burton mines. Approximately 75% of the growth and expansion capital is targeted for various Australian projects for metallurgical and thermal coal, with the remainder in the U.S. Our 2012 capital expenditures will include spending to begin converting two of our Australian mines from contract mining to owner operations.

Table of Contents

Federal Coal Lease Expenditures. We currently anticipate that our federal coal lease expenditures will be \$42.1 million in 2012 and for each of the next three years. These expenditures may increase in 2012 and beyond depending upon our participation in and the successful bidding on future federal coal leases.

Dividends. We have declared and paid quarterly dividends since our initial public offering in 2001. In January 2012, our Board of Directors approved a dividend of \$0.085 per share of common stock, payable on March 1, 2012. The declaration and payment of dividends and the amount of dividends will depend on our results of operations, financial condition, cash requirements, future prospects, any limitations imposed by our debt instruments and other factors deemed relevant by our Board of Directors.

Pension Contributions. During 2011, we made contributions of \$46.7 million. In 2012, our anticipated pension contributions needed to be at or above the Pension Protection Act thresholds is approximately \$5 million.

Share Repurchase Program. At December 31, 2011, our available capacity for share repurchases was \$700.4 million, and our Chairman and Chief Executive Officer has authority to direct us to repurchase up to \$100 million of our common stock outside of the share repurchase program. While no such share repurchases were made in 2011, repurchases may be made from time to time based on an evaluation of our outlook and general business conditions, as well as alternative investment and debt repayment options.

NCIG. Financing for phase one of stage two of construction closed in 2010 with us providing our pro-rata share of funding of \$59.7 million Australian dollars (\$54.8 million U.S. dollars). NCIG may further expand the coal transloading facility's capacity which could require us to fund our pro-rata share in a similar manner.

Debt Service Costs. With the acquisition of Macarthur in 2011, our debt service costs increased with the addition of \$4.1 billion of new debt that included the following.

- A 2011 Term Loan Facility of \$1.0 billion with an interest rate payable of LIBOR plus 2.0%, or 2.26% (as of December 31, 2011) and a maturity date of October 28, 2016;

- 6.00% Senior Notes of \$1.6 billion due November 2018 (the 6.00% Senior Notes), with interest payable on May 15 and November 15 of each year, commencing May 15, 2012; and

- 6.25% Senior Notes of \$1.5 billion due November 2021 (the 6.25% Senior Notes), with interest payable on May 15 and November 15 of each year, commencing May 15, 2012.

While these new debt instruments increased the annual amount of interest to be paid for 2012 and beyond, only the 2011 Term Loan Facility resulted in a \$50.0 million increase to our annual amount of principal to be paid (\$37.5 million in 2012). See the Contractual Obligations section for our estimated debt service costs as of December 31, 2011 for the next five years and thereafter. See Note 11 to our consolidated financial statements for additional information on all of our outstanding debt.

On November 15, 2011, we, the Guarantors and the initial purchasers of the 6.00% Senior Notes and the 6.25% Senior Notes entered into a registration rights agreement (the Registration Rights Agreement). Subject to the terms of the Registration Rights Agreement, we will use our reasonable best efforts to register with the SEC exchange notes having substantially identical terms as the 6.00% Senior Notes and the 6.25% Senior Notes and to exchange freely tradable exchange notes for such notes within 365 days after the issue date of the 6.00% Senior Notes and the 6.25% Senior Notes (effectiveness target date). If we fail to meet the effectiveness target date (a registration default), the annual interest rate on the 6.00% Senior Notes and the 6.25% Senior Notes will increase by 0.25% for each 90-day period during which the default continues, up to a maximum additional interest rate of 1.0% until the registration default is cured.

Table of Contents

Our total indebtedness as of December 31, 2011 and 2010, consisted of the following:

	December 31,	
	2011	2010
	(Dollars in millions)	
Term Loan	\$468.8	\$493.8
2011 Term Loan Facility	1,000.0	—
5.875% Senior Notes due April 2016	—	218.1
7.375% Senior Notes due November 2016	650.0	650.0
6.00% Senior Notes due November 2018	1,600.0	—
6.50% Senior Notes due September 2020	650.0	650.0
6.25% Senior Notes due November 2021	1,500.0	—
7.875% Senior Notes due November 2026	247.3	247.2
Convertible Junior Subordinated Debentures due 2066	375.2	373.3
Capital lease obligations	122.8	69.6
Fair value hedge adjustment	—	2.2
Other	43.4	45.8
Total	\$6,657.5	\$2,750.0

We were in compliance with all of the covenants of the Credit Facility, the 2011 Term Loan Facility, the 7.375% Senior Notes, the 6.00% Senior Notes, the 6.50% Senior Notes, the 6.25% Senior Notes, the 7.875% Senior Notes and the Debentures as of December 31, 2011. As market conditions warrant, we may from time to time repurchase debt securities issued by us, in private negotiated or open market transactions, by tender offer or otherwise. Margin. As part of our trading and brokerage activities, we may be required to post margin with an exchange or one of our counterparties. The amount and timing of margin posted can vary with the volume of trades and market price volatility. Total margin held at December 31, 2011 was \$18.1 million as compared to total margin posted of \$192.1 million at December 31, 2010. For the year ended December 31, 2011, net cash inflows for margin were \$210.2 million. Net cash outflows for margin were \$161.2 million for the year ended December 31, 2010.

Shelf Registration. We have an effective shelf registration statement on file with the SEC for an indeterminate number of securities that is effective for three years (expires August 7, 2012), at which time we expect to be able to file an automatic shelf registration statement that would become immediately effective for another three-year term. Under this universal shelf registration statement, we have the capacity to offer and sell from time to time: securities, including common stock, preferred stock, debt securities, warrants and units.

Historical Cash Flows

	Year Ended		Increase (Decrease) to		
	December 31,		Cash Flow		
	2011	2010	\$	%	
	(Dollars in millions)				
Net cash provided by operating activities	\$1,633.2	\$1,087.1	\$546.1	50.2	%
Net cash used in investing activities	(3,807.8)	(703.6)	(3,104.2)	441.2	%
Net cash provided by (used in) financing activities	1,678.5	(77.1)	1,755.6	(2,277.0)	%

Operating Activities. The changes from the prior year were due to the following:

- Higher cash inflows associated with a return of margin posted on trading activities;
- Increased operating cash flows generated from our Australian Mining operations driven by higher pricing; and
- A prior year decrease in the utilization of our accounts receivable securitization program.

Table of Contents

Investing Activities. The changes from the prior year were due to the following:

\$2.8 billion for the acquisition of a controlling interest in Macarthur; and

Higher current year capital spending, including Prairie State, of \$259.2 million related primarily to our expansion projects in Australia, partially offset by prior year spending to establish and ramp up operations at our Bear Run Mine.

Financing Activities. The changes from the prior year were due to the following:

A net increase in borrowings of long-term debt compared to 2010 of \$3.9 billion driven by the \$4.1 billion of debt proceeds that were used, in part, to fund the Macarthur acquisition; and

Acquisition of noncontrolling interests of \$2.0 billion.

Contractual Obligations

The following is a summary of our contractual obligations as of December 31, 2011:

	Payments Due By Year				
	Total	Less than 1 Year	2 - 3 Years	4 - 5 Years	More than 5 Years
	(Dollars in millions)				
Long-term debt obligations (principal and interest)	\$10,704.2	\$458.8	\$961.1	\$2,722.8	\$6,561.5
Capital lease obligations (principal and interest)	142.0	32.3	67.2	20.8	21.7
Operating lease obligations	610.9	123.1	196.8	139.9	151.1
Unconditional purchase obligations ⁽¹⁾	1,313.0	743.6	569.4	—	—
Coal reserve lease and royalty obligations	227.8	50.7	98.8	50.4	27.9
Take or pay obligations ⁽²⁾	4,547.6	443.1	824.4	469.0	2,811.1
Other long-term liabilities ⁽³⁾	3,035.6	174.1	331.0	324.0	2,206.5
Total contractual cash obligations	\$20,581.1	\$2,025.7	\$3,048.7	\$3,726.9	\$11,779.8

We have purchase agreements with approved vendors for most types of operating expenses. However, our specific open purchase orders (which have not been recognized as a liability) under these purchase agreements, combined

⁽¹⁾ with any other open purchase orders, are not material. The commitments in the table above relate to capital purchases. The purchase obligations for capital expenditures relate to new mines and expansion and extension projects in Australia and the U.S.

Represents various long- and short-term take or pay arrangements associated with rail and port commitments for

⁽²⁾ the delivery of coal including amounts relating to export facilities. Also includes commitments under electricity, water and coal washing agreements with joint ventures.

⁽³⁾ Represents long-term liabilities relating to our postretirement benefit plans, work-related injuries and illnesses, defined benefit pension plans, mine reclamation and end of mine closure costs and exploration obligations.

We do not expect any of the \$119.6 million of gross unrecognized tax benefits reported in our consolidated financial statements to require cash settlement within the next year. Beyond that, we are unable to make reasonably reliable estimates of periodic cash settlements with respect to such unrecognized tax benefits.

Off-Balance Sheet Arrangements

In the normal course of business, we are a party to certain off-balance sheet arrangements. These arrangements include guarantees, indemnifications, financial instruments with off-balance sheet risk, such as bank letters of credit, bank guarantees and surety bonds and our accounts receivable securitization program. Assets and liabilities related to these arrangements are not reflected in our consolidated balance sheets, and we do not expect any material adverse effects on our financial condition, results of operations or cash flows to result from these off-balance sheet arrangements.

Table of Contents

Accounts Receivable Securitization. We have an accounts receivable securitization program (securitization program) with a maximum capacity of \$275.0 million through our wholly-owned, bankruptcy-remote subsidiary (Seller). At December 31, 2011, we had \$41.7 million available under the securitization program, net of outstanding letters of credit and amounts drawn. Under the securitization program, we contribute, on a revolving basis, trade receivables of most of our U.S. subsidiaries to the Seller, which then sells the receivables in their entirety to a consortium of unaffiliated asset-backed commercial paper conduits (the Conduits). After the sale, we, as servicer of the assets, collect the receivables on behalf of the Conduits for a nominal servicing fee. We utilize proceeds from the sale of our accounts receivable as an alternative to short-term borrowings under the Revolver portion of our Credit Facility, effectively managing our overall borrowing costs and providing an additional source for working capital. The current securitization program extends to May 2012, while the letter of credit commitment that supports the commercial paper facility underlying the securitization program must be renewed annually.

The Seller is a separate legal entity whose assets are available first and foremost to satisfy the claims of its creditors. Of the receivables sold to the Conduits, a portion of the amount due to the Seller is deferred until the ultimate collection of the underlying receivables. During the year ended December 31, 2011, we received total consideration of \$4,633.4 million related to accounts receivable sold under the securitization program, including \$3,462.7 million of cash up front from the sale of the receivables, an additional \$1,004.8 million of cash upon the collection of the underlying receivables, and \$165.9 million that had not been collected at December 31, 2011 and was recorded at fair value which approximates carrying value. The reduction in accounts receivable as a result of securitization activity with the Conduits was \$150.0 million at December 31, 2011 and 2010.

The securitization activity has been reflected in the consolidated statements of cash flows as an operating activity because both the cash received from the Conduits upon sale of receivables as well as the cash received from the Conduits upon the ultimate collection of receivables are not subject to significantly different risks given the short-term nature of our trade receivables. We recorded expense associated with securitization transactions of \$2.0 million, \$2.4 million and \$4.0 million for the years ended December 31, 2011, 2010 and 2009, respectively.

Other Off-Balance Sheet Arrangements. From time to time, we enter into coal offtake agreements with counterparties where, as a part of the arrangements, we may provide certain financial guarantees on behalf of the counterparties. As of December 31, 2011, we had in place guarantees of \$10.0 million on behalf of our counterparties relating to such agreements. To mitigate risk, we place liens on the counterparties' production equipment or require performance bonds.

In January 2011, we entered into a bilateral cash collateralization agreement in support of certain letters of credit whereby we posted cash collateral in lieu of utilizing our Credit Facility. The capacity under this new agreement is \$37.0 million, all of which was posted as collateral at December 31, 2011. As of December 31, 2011, we had a total of \$79.7 million posted as collateral under such agreements. The cash collateral is classified within "Cash and cash equivalents" given our ability to substitute letters of credit at any time for this cash collateral.

As discussed above in Capital Resources, we also had \$65.0 million (Australian dollars) of letters of credit and cash backed bank guarantees outstanding under the Macarthur Corporate Funding Facility at December 31, 2011.

See Note 22 to our consolidated financial statements for a discussion of our guarantees.

Table of Contents

Critical Accounting Policies and Estimates

Our discussion and analysis of our financial condition, results of operations, liquidity and capital resources is based upon our financial statements, which have been prepared in accordance with U.S. GAAP. We are also required under U.S. GAAP to make estimates and judgments that affect the reported amounts of assets, liabilities, revenues and expenses, and related disclosure of contingent assets and liabilities. On an ongoing basis, we evaluate our estimates. We base our estimates on historical experience and on various other assumptions that we believe are reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates.

Postretirement Benefit and Pension Liabilities. We have long-term liabilities for our employees' postretirement benefit costs and defined benefit pension plans. Detailed information related to these liabilities is included in Notes 14 and 15 to our consolidated financial statements. Liabilities for postretirement benefit costs are not funded. Our pension obligations are funded in accordance with the provisions of applicable law. Expense for the year ended December 31, 2011 for pension and postretirement liabilities totaled \$119.7 million, while funding payments were \$112.8 million. Each of these liabilities is actuarially determined and we use various actuarial assumptions, including the discount rate and future cost trends, to estimate the costs and obligations for these items. Our discount rate is determined by utilizing a hypothetical bond portfolio model which approximates the future cash flows necessary to service our liabilities.

We make assumptions related to future trends for medical care costs in the estimates of retiree health care and work-related injuries and illnesses obligations. Our medical trend assumption is developed by annually examining the historical trend of our cost per claim data. In addition, we make assumptions related to future compensation increases and rates of return on plan assets in the estimates of pension obligations.

If our assumptions do not materialize as expected, actual cash expenditures and costs that we incur could differ materially from our current estimates. Moreover, regulatory changes could increase our obligation to satisfy these or additional obligations. For our postretirement health care liability, assumed discount rates and health care cost trend rates have a significant effect on the expense and liability amounts reported for health care plans. Below we have provided two separate sensitivity analyses to demonstrate the significance of these assumptions in relation to reported amounts.

Health care cost trend rate:	For Year Ended December 31, 2011	
	One-Percentage- Point Increase	One-Percentage- Point Decrease
	(Dollars in millions)	
Effect on total service and interest cost components ⁽¹⁾	\$8.2	\$(6.9)
Effect on total postretirement benefit obligation ⁽¹⁾	\$121.8	\$(104.6)
Discount rate:	For Year Ended December 31, 2011	
	One-Half Percentage- Point Increase	One-Half Percentage- Point Decrease
	(Dollars in millions)	
Effect on total service and interest cost components ⁽¹⁾	\$0.7	\$(0.7)
Effect on total postretirement benefit obligation ⁽¹⁾	\$(56.8)	\$64.8

In addition to the effect on total service and interest cost components of expense, changes in trend and discount rates would also increase or decrease the actuarial gain or loss amortization expense component. The gain or loss amortization would approximate the increase or decrease in the obligation divided by 11.70 years at January 1, 2012.

Table of Contents

Asset Retirement Obligations. Our asset retirement obligations primarily consist of spending estimates for surface land reclamation and support facilities at both surface and underground mines in accordance with applicable reclamation laws in the U.S. and Australia as defined by each mining permit. Asset retirement obligations are determined for each mine using various estimates and assumptions including, among other items, estimates of disturbed acreage as determined from engineering data, estimates of future costs to reclaim the disturbed acreage and the timing of these cash flows, discounted using a credit-adjusted, risk-free rate. As changes in estimates occur (such as mine plan revisions, changes in estimated costs, or changes in timing of the reclamation activities), the obligation and asset are revised to reflect the new estimate after applying the appropriate credit-adjusted, risk-free rate. If our assumptions do not materialize as expected, actual cash expenditures and costs that we incur could be materially different than currently estimated. Moreover, regulatory changes could increase our obligation to perform reclamation and mine closing activities. Asset retirement obligation expense for the year ended December 31, 2011 was \$53.1 million, and payments totaled \$16.9 million. See Note 13 to our consolidated financial statements for additional details regarding our asset retirement obligations.

Income Taxes. We account for income taxes in accordance with accounting guidance which requires deferred tax assets and liabilities be recognized using enacted tax rates for the effect of temporary differences between the book and tax bases of recorded assets and liabilities. The guidance also requires that deferred tax assets be reduced by a valuation allowance if it is “more likely than not” that some portion or all of the deferred tax asset will not be realized. In our annual evaluation of the need for a valuation allowance, we take into account various factors, including the expected level of future taxable income and available tax planning strategies. If actual results differ from the assumptions made in our annual evaluation of our valuation allowance, we may record a change in valuation allowance through income tax expense in the period such determination is made.

Our liability for unrecognized tax benefits contains uncertainties because management is required to make assumptions and to apply judgment to estimate the exposures associated with our various filing positions. We recognize the tax benefit from an uncertain tax position only if it is “more likely than not” that the tax position will be sustained on examination by the taxing authorities, based on the technical merits of the position. The tax benefits recognized in the financial statements from such a position must be measured based on the largest benefit that has a greater than 50% likelihood of being realized upon ultimate settlement. We believe that the judgments and estimates are reasonable; however, actual results could differ.

Business Combinations. We account for business combinations using the purchase method of accounting. The purchase method requires us to determine the fair value of all acquired assets, including identifiable intangible assets, and all assumed liabilities. The total cost of acquisitions is allocated to the underlying identifiable net assets, based on their respective estimated fair values. Determining the fair value of assets acquired and liabilities assumed requires management's judgment, and the utilization of independent valuation experts, and often involves the use of significant estimates and assumptions, including assumptions with respect to future cash inflows and outflows, discount rates, and asset lives, among other items.

Level 3 Fair Value Measurements. In accordance with the “Fair Value Measurements and Disclosures” topic of the Financial Accounting Standards Board Accounting Standards Codification, we evaluate the quality and reliability of the assumptions and data used to measure fair value in the three level hierarchy, Levels 1, 2 and 3. Level 3 fair value measurements are those where inputs are unobservable, or observable but cannot be market-corroborated, requiring us to make assumptions about pricing by market participants. Commodity swaps and options and physical commodity purchase/sale contracts transacted in less liquid markets or contracts, such as long-term arrangements, with limited price availability were classified in Level 3. Indicators of less liquid markets are those with periods of low trade activity or when broker quotes reflect wide pricing spreads. Generally, these instruments or contracts are valued using internally generated models that include forward pricing curve quotes from one to three reputable brokers. Our valuation techniques also include basis adjustments for heat rate, sulfur and ash content, port and freight costs, and credit and nonperformance risk. We validate our valuation inputs with third-party information and settlement prices from other sources where available. We also consider credit and nonperformance risk in the fair value measurement by analyzing the counterparty's exposure balance, credit rating and average default rate, net of any counterparty credit enhancements (e.g., collateral), as well as our own credit rating for financial derivative liabilities.

We have consistently applied these valuation techniques in all periods presented, and believe we have obtained the most accurate information reasonably available for the types of derivative contracts held. Valuation changes from period to period for each level will increase or decrease depending on: (i) the relative change in fair value for positions held, (ii) new positions added, (iii) realized amounts for completed trades, and (iv) transfers between levels. Our coal trading strategies utilize various swaps and derivative physical contracts. Periodic changes in fair value for purchase and sale positions, which are executed to lock in coal trading spreads, occur in each level and therefore the overall change in value of our coal-trading platform requires consideration of valuation changes across all levels.

Table of Contents

At December 31, 2011 and 2010, 1% (\$8.7 million) and 3% (\$18.6 million), respectively, of our net financial assets were categorized as Level 3. See Notes 6 and 7 to our consolidated financial statements for additional information regarding fair value measurements.

Newly Adopted Accounting Standards and Accounting Standards Not Yet Implemented

See Note 1 to our consolidated financial statements for a discussion of newly adopted accounting pronouncements and accounting pronouncements not yet implemented.

Item 7A. Quantitative and Qualitative Disclosures About Market Risk

The potential for changes in the market value of our coal and freight trading, crude oil, diesel fuel, natural gas, explosives, interest rate and currency portfolios is referred to as “market risk.” Market risk related to our coal trading and freight portfolio, which includes bilaterally-settled and exchange-settled over-the-counter trading as well as brokered trading of coal, is evaluated using a value at risk (VaR) analysis. VaR analysis is not used to evaluate our non-trading interest rate, diesel fuel, explosives and currency hedging portfolios or coal trading activities we employ in support of coal production (as discussed below). We attempt to manage market risks through diversification, controlling position sizes and executing hedging strategies. Due to lack of quoted market prices and the long-term, illiquid nature of the positions, we have not quantified market risk related to our non-trading, long-term coal supply agreement portfolio.

Coal Trading Activities and Related Commodity Price Risk

Coal Price Risk Monitored Using VaR. We engage in direct and brokered trading of coal, ocean freight and fuel-related commodities in over-the-counter markets. These activities give rise to commodity price risk, which represents the potential loss that can be caused by an adverse change in the market value of a particular commitment. We actively measure, monitor and adjust traded position levels to remain within risk limits prescribed by management. For example, we have policies in place that limit the amount of risk, as measured by VaR, that we may assume at any point in time on trading and brokerage activities.

We account for coal trading using the fair value method, which requires us to reflect financial instruments with third parties at market value in our condensed consolidated financial statements. Our trading portfolio included forwards, swaps and options as of December 31, 2011.

The use of VaR allows us to quantify in dollars, on a daily basis, a measure of price risk inherent in our trading portfolio. VaR represents the expected loss in portfolio value due to adverse market movements over a defined time horizon (liquidation period) within a specified confidence level. Our VaR model is based on a variance/co-variance approach. This captures our exposure related to forwards, swaps and options positions. Our VaR model calculates a 5 to 15-day holding period dependent upon the products within our portfolio at the time of VaR measurement and a 95% one-tailed confidence interval. This means that there is a one in 20 statistical chance that the portfolio would lose more than the VaR estimates during the liquidation period. Our volatility calculation incorporates an exponentially weighted moving average algorithm based on the previous 60 market days, which makes our volatility more representative of recent market conditions, while still reflecting an awareness of historical price movements. VaR does not estimate the maximum loss expected in the 5% of the time the portfolio value exceeds measured VaR.

The use of VaR allows us to aggregate pricing risks across products in the portfolio, compare risk on a consistent basis and identify the drivers of risk. We use historical data to estimate price volatility as an input to VaR. Given our reliance on historical data, we believe VaR is reasonably effective in characterizing risk exposures in markets in which there are not sudden fundamental changes or shifts in market conditions. Due to the subjectivity in the choice of the liquidation period, reliance on historical data to calibrate the models and the inherent limitations in the VaR methodology, we perform regular stress and scenario analyses to estimate the impacts of market changes on the value of the portfolio. Additionally, back-testing is regularly performed to monitor the effectiveness of our VaR measure. The results of these analyses are used to supplement the VaR methodology and identify additional market-related risks. An inherent limitation of VaR is that past changes in market risk factors may not produce accurate predictions of future market risk.

During the year ended December 31, 2011, the actual low, high, and average VaR was \$3.5 million, \$30.6 million and \$13.4 million, respectively.

Table of Contents

Other Risk Exposures. We also use our coal trading and brokerage platform to support various coal production-related activities. These transactions may involve coal to be produced from our mines, coal sourcing arrangements with third-party mining companies, joint venture positions with producers or offtake agreements with producers. While the support activities (e.g. forward sale of coal to be produced and/or purchased) may ultimately involve market risk sensitive instruments, the sourcing of coal in these arrangements does not involve market risk sensitive instruments and does not encompass the commodity price risks that we monitor through VaR, as discussed above.

Future Realization. As of December 31, 2011, the timing of the estimated future realization of the value of our trading portfolio was as follows:

Year of Expiration	Percentage of Portfolio Total
2012	65%
2013	29%
2014	4%
2015	2%
	100%

We also monitor other types of risk associated with our coal trading activities, including credit, market liquidity and counterparty nonperformance.

Nonperformance and Credit Risk

Coal Trading. The fair value of our coal trading assets and liabilities reflects adjustments for nonperformance and credit risk. Our exposure is substantially with electric utilities, energy producers and energy marketers. Our policy is to independently evaluate each customer's creditworthiness prior to entering into transactions and to regularly monitor the credit extended. If we engage in a transaction with a counterparty that does not meet our credit standards, we seek to protect our position by requiring the counterparty to provide an appropriate credit enhancement. Also, when appropriate (as determined by our credit management function), we have taken steps to reduce our exposure to customers or counterparties whose credit has deteriorated and who may pose a higher risk of failure to perform under their contractual obligations. These steps include obtaining letters of credit or cash collateral (margin), requiring prepayments for shipments or the creation of customer trust accounts held for our benefit to serve as collateral in the event of a failure to pay or perform. To reduce our credit exposure related to trading and brokerage activities, we seek to enter into netting agreements with counterparties that permit us to offset receivables and payables with such counterparties and, to the extent required, will post or receive margin amounts associated with exchange-cleared positions.

Non-Coal Trading. The fair value of our non-coal trading derivative assets and liabilities also reflects adjustments for nonperformance and credit risk. We conduct our hedging activities related to foreign currency, interest rate, fuel and explosives exposures with a variety of highly-rated commercial banks and closely monitor counterparty creditworthiness. To reduce our credit exposure for these hedging activities, we seek to enter into netting agreements with counterparties that permit us to offset receivables and payables with such counterparties.

Foreign Currency Risk

We utilize currency forwards to hedge currency risk associated with anticipated Australian dollar expenditures. The accounting for these derivatives is discussed in Note 6 to our consolidated financial statements. Assuming we had no hedges in place, our exposure in operating costs and expenses due to a \$0.05 change in the Australian dollar/U.S. dollar exchange rate is approximately \$150 million for 2012. However, taking into consideration hedges currently in place, our net exposure to the same rate change is approximately \$65 million for 2012. The table at the end of Item 7A shows the notional amount of our hedge contracts as of December 31, 2011.

Table of Contents

Interest Rate Risk

Our objectives in managing exposure to interest rate changes are to limit the impact of interest rate changes on earnings and cash flows and to lower overall borrowing costs. From time to time, we manage our debt to achieve a certain ratio of fixed-rate debt and variable-rate debt as a percent of net debt through the use of various hedging instruments, which are discussed in detail in Note 6 to our consolidated financial statements. As of December 31, 2011, we had \$5.2 billion of fixed-rate borrowings and \$1.5 billion of variable-rate borrowings outstanding and had no interest rate swaps in place. A one percentage point increase in interest rates would result in an annualized increase to interest expense of approximately \$15 million on our variable-rate borrowings. With respect to our fixed-rate borrowings, a one percentage point increase in interest rates would result in a decrease of approximately \$338 million in the estimated fair value of these borrowings.

Other Non-trading Activities — Commodity Price Risk

Long-Term Coal Contracts. We manage our commodity price risk for our non-trading, long-term coal contract portfolio through the use of long-term coal supply agreements (those with terms longer than one year), rather than through the use of derivative instruments. Sales under such agreements comprised approximately 91%, 91% and 93% of our worldwide sales (by volume) for the years ended December 31, 2011, 2010 and 2009, respectively.

Substantially all of our coal in the U.S. is contracted in 2012 at planned production levels. We had 40% to 50% of seaborne thermal coal volumes available for pricing in at January 24, 2012. We expect near-term macroeconomic movements to dictate quarterly metallurgical coal pricing for the remainder of the 2012 and we are targeting total 2012 metallurgical coal sales of approximately 14 to 15 million tons.

Diesel Fuel and Explosives Hedges. We manage commodity price risk of the diesel fuel and explosives used in our mining activities through the use of cost pass-through contracts and derivatives, primarily swaps.

Notional amounts outstanding under fuel-related, derivative swap contracts are noted in the table at the end of Item 7A. We expect to consume 160 to 165 million gallons of diesel fuel in 2012. Assuming we had no hedges in place, a \$10 per barrel change in the price of crude oil (the primary component of a refined diesel fuel product) would increase or decrease our annual diesel fuel costs by approximately \$38 million based on our expected usage. However, taking into consideration hedges currently in place, our net exposure to changes in the price of crude oil is approximately \$15 million.

Notional amounts outstanding under explosives-related swap contracts are noted in the table at the end of Item 7A.

We expect to consume 380,000 to 390,000 tons of explosives during 2012 in the U.S. Explosives costs in Australia are generally included in the fees paid to our contract miners. Assuming we had no hedges in place, a price change in natural gas (often a key component in the production of explosives) of one dollar per million MMBtu would result in an increase or decrease in our annual explosives costs of approximately \$7 million based on our expected usage. However, taking into consideration hedges currently in place, our net exposure to changes in the price of natural gas is approximately \$2 million.

Table of Contents

Notional Amounts and Fair Value. The following summarizes our interest rate, foreign currency and commodity positions at December 31, 2011:

	Notional Amount by Year of Maturity

Item 8. Financial Statements and Supplementary Data.

See Part IV, Item 15 of this report for information required by this Item, which information is incorporated by reference herein.

Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure.

None.

Item 9A. Controls and Procedures.

Evaluation of Disclosure Controls and Procedures

Our disclosure controls and procedures are designed to, among other things, provide reasonable assurance that material information, both financial and non-financial, and other information required under the securities laws to be disclosed is accumulated and communicated to senior management, including the principal executive officer and principal financial officer, on a timely basis. As of December 31, 2011, the end of the period covered by this Annual Report on Form 10-K, we carried out an evaluation of the effectiveness of the design and operation of our disclosure controls and procedures. Based upon that evaluation, our Chief Executive Officer and Chief Financial Officer have evaluated our disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934) as of December 31, 2011, and concluded that such controls and procedures are effective to provide reasonable assurance that the desired control objectives were achieved.

Table of Contents

Changes in Internal Control Over Financial Reporting

We periodically review our internal control over financial reporting as part of our efforts to ensure compliance with the requirements of Section 404 of the Sarbanes-Oxley Act of 2002. In addition, we routinely review our system of internal control over financial reporting to identify potential changes to our processes and systems that may improve controls and increase efficiency, while ensuring that we maintain an effective internal control environment. Changes may include such activities as implementing new systems, consolidating the activities of acquired business units, migrating certain processes to our shared services organizations, formalizing and refining policies and procedures, improving segregation of duties and adding monitoring controls. In addition, when we acquire new businesses, we incorporate our controls and procedures into the acquired business as part of our integration activities.

On October 26, 2011, we acquired Macarthur. As a result of the acquisition, we are in the process of reviewing the internal control structure of Macarthur and, if necessary, will make appropriate changes as we incorporate our controls and procedures into the acquired business. Except for the acquisition, there have been no changes in our internal control over financial reporting that occurred during the three months ended December 31, 2011 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Management's Report on Internal Control Over Financial Reporting

Management is responsible for maintaining and establishing adequate internal control over financial reporting. Our internal control framework and processes are designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of our consolidated financial statements for external purposes in accordance with U.S. generally accepted accounting principles.

Because of inherent limitations, any system of internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Management conducted an assessment of the effectiveness of our internal control over financial reporting using the criteria set by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in Internal Control - Integrated Framework. Based on this assessment, management concluded that the Company's internal control over financial reporting was effective to provide reasonable assurance that the desired control objectives were achieved as of December 31, 2011.

Management's assessment of the effectiveness of our internal control over financial reporting did not include the internal controls of Macarthur, which was acquired on October 26, 2011. In accordance with SEC guidance regarding the reporting of internal control over financial reporting in connection with an acquisition, management may omit an assessment of an acquired business' internal control over financial reporting from management's assessment of internal control over financial reporting for a period not to exceed one year from the date of acquisition. Management's assessment of the effectiveness of our internal control over financial reporting as of December 31, 2012 will include the internal controls of Macarthur. Macarthur is included in our consolidated financial statements and constituted \$5.3 billion of total assets, \$152.9 million of revenues and contributed a net loss of \$47.9 million of our net income as of and for the year ended December 31, 2011.

Our Independent Registered Public Accounting Firm, Ernst & Young LLP, has audited our internal control over financial reporting, as stated in their unqualified opinion report included herein.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Stockholders

Peabody Energy Corporation

We have audited Peabody Energy Corporation's (the Company's) internal control over financial reporting as of December 31, 2011, based on criteria established in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (the COSO criteria). The Company's management is responsible for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Management's Report on Internal Control Over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

As indicated in the accompanying Management's Report on Internal Control Over Financial Reporting, management's assessment of and conclusion on the effectiveness of internal control over financial reporting did not include the internal controls of entities acquired through the Macarthur Coal Limited acquisition, which is included in the 2011 consolidated financial statements of the Company and constituted \$5.3 billion and \$5.0 billion of total and net assets, respectively, as of December 31, 2011, and \$152.9 million and \$47.9 million of revenues and net loss, respectively, for the year then ended. Our audit of internal control over financial reporting of the Company also did not include an evaluation of the internal control over financial reporting of entities acquired through the Macarthur Coal Limited acquisition.

In our opinion, Peabody Energy Corporation maintained, in all material respects, effective internal control over financial reporting as of December 31, 2011, based on the COSO criteria.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of Peabody Energy Corporation as of December 31, 2011 and 2010, and the related consolidated statements of income, comprehensive income, changes in stockholders' equity, and cash flows for each of the three years in the period ended December 31, 2011 and our report dated February 27, 2012, expressed an unqualified opinion thereon.

PART III

Item 10. Directors, Executive Officers and Corporate Governance.

The information required by Item 401 of Regulation S-K is included under the caption “Election of Directors-Director Qualifications” in our 2012 Proxy Statement and in Part I of this report under the caption “Executive Officers of the Company.” The information required by Items 405, 406 and 407(c)(3), (d)(4) and (d)(5) of Regulation S-K is included under the captions “Ownership of Company Securities — Section 16(a) Beneficial Ownership Reporting Compliance,” “Corporate Governance Matters” and “Information Regarding Board of Directors and Committees-Committees of the Board of Directors-Audit Committee” in our 2012 Proxy Statement. Such information is incorporated herein by reference.

Item 11. Executive Compensation.

The information required by Items 402 and 407(e)(4) and (e)(5) of Regulation S-K is included under the captions “Executive Compensation,” “Compensation Committee Interlocks and Insider Participation” and “Report of the Compensation Committee” in our 2012 Proxy Statement and is incorporated herein by reference.

Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters.

The information required by Item 403 of Regulation S-K is included under the caption “Ownership of Company Securities” in our 2012 Proxy Statement and is incorporated herein by reference.

Equity Compensation Plan Information

As required by Item 201(d) of Regulation S-K, the following table provides information regarding our equity compensation plans as of December 31, 2011:

Plan Category	(a) Number of Securities to be Issued upon Exercise of Outstanding Options, Warrants and Rights	Weighted-Average Exercise Price of Outstanding Options, Warrants and Rights	Number of Securities Remaining Available for Future Issuance Under Equity Compensation Plans (Excluding Securities Reflected in Column (a))	
Equity compensation plans approved by security holders	1,703,574	(1) \$32.53	(2) 16,929,167	(3)
Equity compensation plans not approved by security holders	—	—	—	
Total	1,703,574	\$32.53	16,929,167	

(1) Includes 57,528 shares issuable pursuant to outstanding deferred stock units and 344,439 shares issuable pursuant to outstanding performance units.

(2) The weighted average exercise price shown in the table does not take into account outstanding deferred stock units or performance awards.

(3) Includes 2,142,300 shares available for issuance under our U.S. Employee Stock Purchase Plan and 962,604 shares available for issuance under our Australian Employee Stock Purchase Plan.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Stockholders

Peabody Energy Corporation

We have audited the accompanying consolidated balance sheets of Peabody Energy Corporation (the Company) as of December 31, 2011 and 2010, and the related consolidated statements of income, comprehensive income, changes in stockholders' equity, and cash flows for each of the three years in the period ended December 31, 2011. Our audits also included the financial statement schedule listed in Item 15(a). These financial statements and schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements and schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the consolidated financial position of Peabody Energy Corporation at December 31, 2011 and 2010, and the consolidated results of its operations and its cash flows for each of the three years in the period ended December 31, 2011, in conformity with U.S. generally accepted accounting principles. Also, in our opinion, the related financial statement schedule, when considered in relation to the basic financial statements taken as a whole, presents fairly in all material respects the information set forth therein.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Peabody Energy Corporation's internal control over financial reporting as of December 31, 2011, based on criteria established in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated February 27, 2012, expressed an unqualified opinion thereon.

PEABODY ENERGY CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(1) Summary of Significant Accounting Policies Discussion

Basis of Presentation

The consolidated financial statements include the accounts of Peabody Energy Corporation (the Company) and its affiliates. All intercompany transactions, profits and balances have been eliminated in consolidation.

Description of Business

The Company is engaged in the mining of thermal coal for sale primarily to electric utilities and metallurgical coal for sale to industrial customers. The Company's mining operations are located in the United States (U.S.) and Australia, and include equity-affiliate mining operations in Australia and Venezuela. The Company also markets, brokers coal sales of other coal producers both as principal and agent, and trades coal, freight and freight-related contracts. The Company's other energy related commercial activities include participating in the development of a mine-mouth coal-fueled generating plant, the management of its coal reserve and real estate holdings, and the development of Btu Conversion and clean coal technologies.

Newly Adopted Accounting Standards and Accounting Standards Not Yet Implemented

In June 2011, the Financial Accounting Standards Board (FASB) issued guidance eliminating the option to present the components of other comprehensive income as part of the statement of changes in stockholders' equity. Instead, an entity will be required to present the components of net income, the components of other comprehensive income and the total of comprehensive income either in a single continuous statement of comprehensive income or in two separate but consecutive statements. The guidance will become effective for interim and annual periods beginning after December 15, 2011 (January 1, 2012 for the Company), with the exception of disclosing reclassifications of items out of accumulated other comprehensive income, which is effective for interim and annual periods beginning after December 15, 2012 (January 1, 2013 for the Company). The Company has reflected the new presentation in its consolidated statements of comprehensive income with no impact on its results of operations, financial condition or cash flows.

In December 2010, the FASB issued guidance on accounting for business combinations that clarified a public entity's disclosure requirements for pro forma presentation of revenue and earnings. If comparative statements are presented, the public entity should disclose revenue and earnings of the combined entity as though the business combination occurred as of the beginning of the comparable prior annual reporting period only. The guidance also requires the supplemental pro forma disclosures to include a description of the nature and amount of material nonrecurring pro forma adjustments directly attributable to the business combination included in the reported pro forma revenue and earnings. The guidance was effective for business combinations for which the acquisition date was on or after the beginning of the first annual reporting period that began on or after December 15, 2010 (January 1, 2011 for the Company). The guidance impacted the Company's disclosures with no impact on the Company's results of operations, financial condition or cash flows.

In July 2010, the FASB issued accounting guidance to improve disclosures about the credit quality of an entity's financing receivables and the reserves held against them. End of reporting period disclosures became effective for reporting periods ended on or after December 15, 2010. Disclosures about activity that occurred during a reporting period became effective for interim and annual periods that began on or after December 15, 2010. While the guidance impacted the Company's disclosures related to credit quality of financing receivables and the allowance for credit losses, the adoption of this guidance had no impact on its results of operations, financial condition or cash flows.

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

In January 2010, the FASB issued accounting guidance that required new fair value disclosures, including disclosures about significant transfers into and out of Level 1 and Level 2 fair value measurements and a description of the reasons for the transfers. In addition, the guidance required new disclosures regarding activity in Level 3 fair value measurements, including a gross basis reconciliation. The Company began complying with the new fair value disclosure requirements beginning January 1, 2010, except for the disclosure of activity within Level 3 fair value measurements, which became effective January 1, 2011. While the adoption of this guidance had an impact on the Company's disclosures, it did not affect the Company's results of operations, financial condition or cash flows. In May 2011, the FASB issued additional fair value measurement disclosure requirements that were intended to provide a consistent definition of fair value and ensure that the fair value measurement and disclosure requirements are similar between U.S. generally accepted accounting principles (GAAP) and International Financial Reporting Standards. That update required the categorization by level for financial instruments not measured at fair value but for which disclosure of fair value is required, disclosure of all transfers between Level 1 and Level 2, and additional disclosures for Level 3 measurements regarding the sensitivity of fair value to changes in unobservable inputs and any interrelationships between those inputs. The guidance will become effective for interim and annual periods beginning after December 15, 2011 (January 1, 2012 for the Company). The guidance issued in May 2011 will impact the Company's disclosures, but it is not expected to impact the Company's results of operations, financial condition or cash flows.

In June 2009, the FASB issued accounting guidance on consolidations which clarifies that the determination of whether a company is required to consolidate an entity is based on, among other things, an entity's purpose and design and a company's ability to direct the activities of the entity that most significantly impact the entity's economic performance. Also required is an ongoing reassessment of whether a company is the primary beneficiary of a variable interest entity, and additional disclosures about a company's involvement in variable interest entities and any associated changes in risk exposure. The guidance became effective January 1, 2010, at which time there was no impact on the Company's results of operations, financial condition or cash flows. The Company will continue monitoring and assessing its business ventures in accordance with the guidance.

In June 2009, the FASB issued guidance seeking to improve the relevance, representational faithfulness and comparability of the information a reporting entity provides in its financial statements about a transfer of financial assets; the effects of a transfer on its financial position, financial performance and cash flows; and a transferor's continuing involvement, if any, in transferred financial assets. The guidance, which became effective January 1, 2010, had an impact on the Company's disclosures for its accounts receivable securitization program, but did not affect the Company's results of operations, financial condition or cash flows.

Sales

The Company's revenue from coal sales is realized and earned when risk of loss passes to the customer. Under the typical terms of the Company's coal supply agreements, title and risk of loss transfer to the customer at the mine or port, where coal is loaded to the transportation source(s) that serves each of the Company's mines. The Company incurs certain "add-on" taxes and fees on coal sales. Reported coal sales include taxes and fees charged by various federal and state governmental bodies and the freight charges on destination customer contracts.

Other Revenues

Other revenues include net revenues from coal trading activities as discussed in Note 7 and coal revenues that were derived from the Company's mining operations and sold through the Company's coal trading business. Also included are revenues from contract termination or restructuring payments, royalties related to coal lease agreements, sales agency commissions, farm income, property and facility rentals and generation development activities. Royalty income generally results from the lease or sublease of mineral rights to third parties, with payments based upon a percentage of the selling price or an amount per ton of coal produced.

Discontinued Operations and Assets Held for Sale

The Company classifies items within discontinued operations in the consolidated financial statements when the operations and cash flows of a particular component (defined as operations and cash flows that can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the entity) of the Company have been (or will be) eliminated from the ongoing operations of the Company as a result of a disposal transaction, and the Company will no longer have any significant continuing involvement in the operations of that component. See Note 3 for additional details related to discontinued operations and assets held for sale.

F - 9

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Cash and Cash Equivalents

Cash and cash equivalents are stated at cost, which approximates fair value. Cash equivalents consist of highly liquid investments with original maturities of three months or less.

Inventories

Materials and supplies and coal inventory are valued at the lower of average cost or market. Raw coal represents coal stockpiles that may be sold in current condition or may be further processed prior to shipment to a customer. Coal inventory costs include labor, supplies, equipment, operating overhead and other related costs.

Property, Plant, Equipment and Mine Development

Property, plant, equipment and mine development are recorded at cost. Interest costs applicable to major asset additions are capitalized during the construction period. Capitalized interest in 2011, 2010 and 2009 was immaterial. Expenditures which extend the useful lives of existing plant and equipment assets are capitalized. Maintenance and repairs are charged to operating costs as incurred. Costs incurred to develop coal mines or to expand the capacity of operating mines are capitalized. Costs incurred to maintain current production capacity at a mine are charged to operating costs as incurred. Costs to acquire computer hardware and the development and/or purchase of software for internal use are capitalized and depreciated over the estimated useful lives.

Coal reserves are recorded at cost, or at fair value in the case of nonmonetary exchanges of reserves or business acquisitions. The net book value of coal reserves totaled \$7.7 billion as of December 31, 2011 and \$5.0 billion as of December 31, 2010. These coal reserves include mineral rights for leased coal interests and advance royalties that had a net book value of \$6.4 billion as of December 31, 2011 and \$3.7 billion as of December 31, 2010. The remaining net book value of coal reserves of \$1.3 billion at December 31, 2011 and \$1.3 billion at December 31, 2010 relates to coal reserves held by fee ownership. Amounts attributable to properties where the Company was not currently engaged in mining operations or leasing to third parties and, therefore, the coal reserves were not currently being depleted was \$2.7 billion as of December 31, 2011 and \$1.3 billion as of December 31, 2010.

Depletion of coal reserves and amortization of advance royalties is computed using the units-of-production method utilizing only proven and probable reserves (as adjusted for recoverability factors) in the depletion base. Mine development costs are principally amortized over the estimated lives of the mines using the straight-line method. Depreciation of plant and equipment is computed using the straight-line method over the shorter of the asset's estimated useful life or the life of the mine. The estimated useful lives by category of assets are as follows:

	Years
Building and improvements	10 to 20
Plant and equipment	3 to 33
Leasehold improvements	Life of Lease

Depreciation and depletion expense associated with property, plant, equipment and mine development was \$473.7 million, \$424.8 million and \$388.0 million for December 31, 2011, 2010, and 2009, respectively.

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Investments in Joint Ventures

The Company accounts for its investments in less than majority owned corporate joint ventures under either the equity or cost method. The Company applies the equity method to investments in joint ventures when it has the ability to exercise significant influence over the operating and financial policies of the joint venture. Investments accounted for under the equity method are initially recorded at cost, and any difference between the cost of the Company's investment and the underlying equity in the net assets of the joint venture at the investment date is amortized over the lives of the related assets that gave rise to the difference. The Company's pro rata share of earnings from joint ventures and basis difference amortization is reported in the consolidated statements of income in "Loss from equity affiliates." Included in the Company's equity method investments is its joint venture interest in the Middlemount Mine in Australia, which was acquired as a part of the acquisition of Macarthur Coal Limited (see Note 2 for additional details). The Company also has an interest in Carbones del Guasare, which owns and operates the Paso Diablo Mine in Venezuela. In 2009, the Company recognized an impairment loss of \$34.7 million related to its interest in Carbones del Guasare based on the joint venture's deteriorating operating results, ongoing cash flow issues resulting in no dividend payments since January 2008, the Company's expectations concerning ongoing operating and cash flow issues for the joint venture and uncertainty impacting recoverability of this investment. The table below summarizes the book value of the Company's equity method investments, which is reported in "Investments and other assets" in the consolidated balance sheets, and the (loss) income from its equity affiliates:

	Book Value at December 31,		(Loss) Income from Equity Affiliates for the Year Ended December 31,		
	2011	2010	2011	2010	2009
	(Dollars in millions)				
Interest in Middlemount Coal Pty Ltd.	\$449.7	\$—	\$(7.3) \$—	\$—
Interest in Monto Coal Pty Ltd.	73.1	—	—	—	—
Interest in Carbones del Guasare	—	—	—	—	(54.6)
Interest in Peabody-Winsway Resources B.V.	—	—	(3.4) 5.4	(8.2)
Other equity method investments	3.8	2.7	(8.5) (7.1) (6.3)
Total equity method investments	\$526.6	\$2.7	\$(19.2) \$(1.7) \$(69.1)

Asset Retirement Obligations

The Company's asset retirement obligation (ARO) liabilities primarily consist of spending estimates for surface land reclamation and support facilities at both surface and underground mines in accordance with applicable reclamation laws in the U.S. and Australia as defined by each mining permit.

The Company estimates its ARO liabilities for final reclamation and mine closure based upon detailed engineering calculations of the amount and timing of the future cash spending for a third party to perform the required work. Spending estimates are escalated for inflation and then discounted at the credit-adjusted, risk-free rate. The Company records an ARO asset associated with the discounted liability for final reclamation and mine closure. The obligation and corresponding asset are recognized in the period in which the liability is incurred. The ARO asset is amortized on the units-of-production method over its expected life and the ARO liability is accreted to the projected spending date. As changes in estimates occur (such as mine plan revisions, changes in estimated costs or changes in timing of the performance of reclamation activities), the revisions to the obligation and asset are recognized at the appropriate historical credit-adjusted, risk-free rate. The Company also recognizes an obligation for contemporaneous reclamation liabilities incurred as a result of surface mining. Contemporaneous reclamation consists primarily of grading, topsoil replacement and re-vegetation of backfilled pit areas.

Environmental Liabilities

Accruals for other environmental matters are recorded in operating expenses when it is probable that a liability has been incurred and the amount of the liability can be reasonably estimated. Accrued liabilities are exclusive of claims against third parties and are not discounted. In general, costs related to environmental remediation are charged to expense. The current portion of these accruals is included in "Accounts payables and accrued expenses" and the long-term portion is included in "Other noncurrent liabilities" in the consolidated balance sheets.

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Income Taxes

Income taxes are accounted for using a balance sheet approach. The Company accounts for deferred income taxes by applying statutory tax rates in effect at the reporting date of the balance sheet to differences between the book and tax basis of assets and liabilities. A valuation allowance is established if it is “more likely than not” that the related tax benefits will not be realized. In determining the appropriate valuation allowance, the Company considers projected realization of tax benefits based on expected levels of future taxable income, available tax planning strategies and the overall deferred tax position.

The Company recognizes the tax benefit from uncertain tax positions only if it is “more likely than not” the tax position will be sustained on examination by the taxing authorities. The tax benefits recognized from such a position are measured based on the largest benefit that has a greater than fifty percent likelihood of being realized upon ultimate settlement. To the extent the Company’s assessment of such tax positions changes, the change in estimate will be recorded in the period in which the determination is made. Tax-related interest and penalties are classified as a component of income tax expense.

Postretirement Health Care and Life Insurance Benefits

The Company accounts for postretirement benefits other than pensions by accruing the costs of benefits to be provided over the employees’ period of active service. These costs are determined on an actuarial basis. The Company’s consolidated balance sheets reflect the funded status of postretirement benefits. See Note 14 for information related to postretirement benefits.

Pension Plans

The Company sponsors non-contributory defined benefit pension plans accounted for by accruing the cost to provide the benefits over the employees’ period of active service. These costs are determined on an actuarial basis. The Company’s consolidated balance sheets reflect the funded status of the defined benefit pension plans. See Note 15 for information related to pension plans.

Derivatives

The Company recognizes at fair value all derivatives as assets or liabilities in the consolidated balance sheets. Gains or losses from derivative financial instruments designated as fair value hedges are recognized immediately in earnings, along with the offsetting gain or loss related to the underlying hedged item.

Gains or losses on derivative financial instruments designated as cash flow hedges are recorded as a separate component of stockholders’ equity until the hedged transaction occurs (or until hedge ineffectiveness is determined), at which time gains or losses are reclassified to earnings in conjunction with the recognition of the underlying hedged item. To the extent that the periodic changes in the fair value of the derivatives exceed the changes in the hedged item, the ineffective portion of the periodic non-cash changes are recorded in earnings in the period of the change. If the hedge ceases to qualify for hedge accounting, the Company prospectively recognizes the mark-to-market movements in earnings in the period of the change. The potential for hedge ineffectiveness is present in the design of the Company’s cash flow hedge relationships and is discussed in detail in Notes 6 and 7.

Non-derivative contracts and derivative contracts for which the Company has elected to apply the normal purchases and normal sales exception are accounted for on an accrual basis.

Business Combinations

The Company accounts for business combinations using the purchase method of accounting. The purchase method requires the Company to determine the fair value of all acquired assets, including identifiable intangible assets, and all assumed liabilities. The total cost of acquisitions is allocated to the underlying identifiable net assets, based on their respective estimated fair values. Determining the fair value of assets acquired and liabilities assumed requires management’s judgment, and the utilization of independent valuation experts, and often involves the use of significant estimates and assumptions, including assumptions with respect to future cash inflows and outflows, discount rates, and asset lives, among other items.

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Use of Estimates in the Preparation of the Consolidated Financial Statements

The preparation of financial statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Impairment of Long-Lived Assets

The Company records impairment losses on long-lived assets used in operations when events and circumstances indicate that assets might be impaired and the undiscounted cash flows estimated to be generated by those assets under various assumptions are less than their carrying amounts. Impairment losses are measured by comparing the estimated fair value of the impaired asset to its carrying amount. There were no impairment losses recorded during the years ended December 31, 2011, 2010 or 2009.

Fair Value

For assets and liabilities that are recognized or disclosed at fair value in the consolidated financial statements, the Company defines fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The Company's asset and liability derivative positions are offset on a counterparty-by-counterparty basis if the contractual agreement provides for the net settlement of contracts with the counterparty in the event of default or termination of any one contract.

Foreign Currency

Substantially all of the Company's foreign subsidiaries utilize the U.S. dollar as their functional currency. As such, monetary assets and liabilities are remeasured at year-end exchange rates while non-monetary items are remeasured at historical rates. Income and expense accounts are remeasured at the average rates in effect during the year, except for those expenses related to balance sheet amounts that are remeasured at historical exchange rates. Gains and losses from foreign currency remeasurement related to tax balances are included as a component of "Income tax provision" while all other remeasurement gains and losses are included in "Operating costs and expenses." The total foreign currency remeasurement losses for the years ended December 31, 2011, 2010 and 2009 were \$0.9 million, \$38.5 million and \$55.4 million, respectively.

Share-Based Compensation

The Company accounts for share-based compensation at the grant date fair value of awards and recognizes the related expense over the vesting period of the award. See Note 17 for information related to share-based compensation.

Exploration and Drilling Costs

Exploration expenditures are charged to operating costs as incurred, including costs related to drilling and study costs incurred to convert or upgrade mineral resources to reserves.

Advance Stripping Costs

Pre-production: At existing surface operations, additional pits may be added to increase production capacity in order to meet customer requirements. These expansions may require significant capital to purchase additional equipment, expand the workforce, build or improve existing haul roads and create the initial pre-production box cut to remove overburden (i.e., advance stripping costs) for new pits at existing operations. If these pits operate in a separate and distinct area of the mine, the costs associated with initially uncovering coal (i.e., advance stripping costs incurred for the initial box cuts) for production are capitalized and amortized over the life of the developed pit consistent with coal industry practices.

Post-production: Advance stripping costs related to post-production are expensed as incurred. Where new pits are routinely developed as part of a contiguous mining sequence, the Company expenses such costs as incurred. The development of a contiguous pit typically reflects the planned progression of an existing pit, thus maintaining production levels from the same mining area utilizing the same employee group and equipment.

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

(2) Acquisition of Macarthur Coal Limited

On October 23, 2011, PEAMCoal Pty Ltd (PEAMCoal), an Australian company that was then indirectly owned 60% by the Company and 40% by ArcelorMittal, acquired a majority interest in Macarthur Coal Limited (Macarthur) through an all cash off-market takeover offer. On October 26, 2011 (the acquisition and control date), the Company appointed its nominees to the Macarthur Board of Directors and executive management team. The acquisition was completed on December 20, 2011 as PEAMCoal acquired all of Macarthur's remaining outstanding shares of common stock for \$4.8 billion, net of \$261.2 million of acquired cash, of which the Company's share was \$2.8 billion. PEAMCoal accounted for share acceptances under the takeover process as a single transaction occurring on October 26, 2011. On December 21, 2011, the Company acquired ArcelorMittal Mining Australasia B.V., an indirect subsidiary of ArcelorMittal that indirectly owned 40% of PEAMCoal, for \$2.0 billion resulting in the Company's 100% ownership of Macarthur.

The Macarthur acquisition includes a 73.3% undivided interest in the assets and liabilities of Coppabella and Moorvale operating mines and the Codrilla Mine Project. It also includes a 50% interest in the Middlemount Mine and a prospective portfolio of coal mining assets at various stages of development and exploration. The acquisition expands the Company's Australian mining platform to serve the seaborne coal markets.

The Company funded the acquisition and purchase of noncontrolling interests using available cash on hand, cash proceeds from a new term loan facility of \$1.0 billion and proceeds from the issuance of \$3.1 billion aggregate principal amount of senior notes. The Company recorded \$55.6 million in deferred financing costs associated with this debt, which are being amortized over the remaining term of the related debt. See Note 11 for information related to the Company's long-term debt.

The preliminary purchase accounting allocations have been recorded in the accompanying consolidated financial statements as of, and for the period subsequent to the acquisition and control date. The final valuation of the net assets acquired is expected to be finalized once third-party valuation appraisals are completed. The following table summarizes the preliminary estimated fair values of assets acquired and liabilities assumed that were recognized at the acquisition and control date (Dollars in millions):

Accounts receivable, net	\$106.6	
Inventories	67.1	
Other current assets	137.5	
Property, plant, equipment and mine development	3,457.0	
Investments and other assets	1,275.1	
Current maturities of long-term debt	(11.0))
Accounts payable and accrued expenses	(133.8))
Long-term debt, less current maturities	(59.2))
Asset retirement obligations	(39.3))
Other noncurrent liabilities	(31.4))
Noncontrolling interests	(2,011.9))
Total purchase price, net of cash acquired of \$261.2	\$2,756.7	

Cash, accounts receivables, accounts payable and other current assets and liabilities were stated at their historical carrying values, which approximated fair value given their short-term nature. The Company is evaluating mine lives and reviewing coal reserve studies on the acquired properties, the outcome of which will determine the fair value allocated to coal reserve assets. In connection with acquisition of Macarthur, the Company acquired contract based

intangibles consisting of port, rail and water take-or-pay obligations and recorded a liability of \$30.5 million, net of tax. The liability is being amortized based on unutilized capacity over the terms of the applicable agreements, which extend to 2018.

Included in "Accounts receivable, net," "Other current assets" and "Investments and other assets" above are \$34.5 million, \$66.6 million and \$234.9 million, respectively, of certain financing receivables that were acquired as part of the acquisition of Macarthur. For further discussion of these financing receivables, see Note 8.

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Included in "Investments and other assets" is \$368.9 million representing the balance of a loan facility agreement with MCG Coal Holdings Pty Ltd (MCGH). Macarthur had previously agreed to convert its receivable for a 90% equity interest in MCGH. The transaction was expected to be completed in May 2011. However, non-performance by a third party to the transaction resulted in Macarthur commencing litigation. The original loan balance was classified as a receivable pending the outcome of the legal proceedings. Subsequent to December 31, 2011, the court ruled that the outstanding loan balance is to be converted to a 90% equity interest. For further discussion of contingencies assumed as part of the acquisition of Macarthur, see Note 23.

Macarthur contributed revenues of \$152.9 million and a loss net of income taxes of \$47.9 million from the acquisition and control date to December 31, 2011, excluding the acquisition costs noted below and the interest expense associated with the debt secured to finance the acquisition. The results of Macarthur for the period from the acquisition and control date are included in the consolidated statements of income and are reported in the Australian Mining segment in Note 25, except for the activity associated with certain equity affiliate investments, which is reflected in the Corporate and Other segment.

In 2011, the Company recorded acquisition costs of \$85.2 million, which primarily consisted of professional fees, losses on derivatives associated with the acquisition of Macarthur shares and Australian stamp duty associated with the acquisition. These acquisition costs are recorded in the "Acquisition Costs Related to Macarthur Coal Limited" line item in the consolidated statements of income. The Company also recognized \$16.2 million of interest expense associated with bridge financing for the Macarthur acquisition.

The following unaudited pro forma financial information presents the combined results of operations of the Company and Macarthur, on a pro forma basis, as though the companies had been combined as of January 1, 2010. The pro forma financial information does not necessarily reflect the results of operations that would have occurred had the Company and Macarthur constituted a single entity during those periods or that may be attained in the future.

	Year Ended December 31,	
	2011	2010
	(Dollars in millions, except earnings per share)	
Revenue	\$8,696.5	\$7,579.5
Income from continuing operations, net of income taxes	1,046.7	781.5
Basic earnings per share	3.67	2.80
Diluted earnings per share	3.65	2.77

The pro forma income from continuing operations, net of income taxes includes adjustments to operating costs to reflect the additional expense for the estimated impact of the fair value adjustment for coal inventory, the estimated impact on depreciation, depletion and amortization for the fair value adjustment for property, plant and equipment (including mineral rights) and additional expense for the estimated impact of reflecting the equity affiliate interest at its estimated fair value.

(3) Discontinued Operations

Discontinued operations include certain non-strategic Midwestern and Australian mining assets held for sale where the Company has committed to the divestiture of such assets and other operations recently divested.

Revenues resulting from discontinued operations (including assets held for sale) were \$121.6 million, \$205.8 million and \$466.9 million for the years ended December 31, 2011, 2010 and 2009, respectively. (Loss) income before income taxes from discontinued operations reflects a loss of \$86.5 million and \$33.5 million for the years ended

December 31, 2011 and December 31, 2010, respectively, and income of \$36.8 million for the year ended December 31, 2009. The income tax adjustment resulting from discontinued operations reflects a benefit of \$22.3 million and \$9.1 million for the years ended December 31, 2011 and December 31, 2010, respectively, and a provision of \$17.0 million for the year ended December 31, 2009.

Total assets related to discontinued operations were \$143.7 million and \$77.6 million as of December 31, 2011 and 2010, respectively. Total liabilities associated with discontinued operations were \$86.3 million and \$43.3 million as of December 31, 2011 and 2010, respectively.

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

(4) Inventories

Inventories consisted of the following:

	December 31,	
	2011	2010
	(Dollars in millions)	
Materials and supplies	\$124.9	\$94.5
Raw coal	95.0	55.4
Saleable coal	226.4	177.3
Total	\$446.3	\$327.2

(5) Investments

The Company's short-term investments are defined as those investments with original maturities of greater than three months and up to one year, and long-term investments are defined as those investments with original maturities greater than one year.

The Company classifies its investments as either held-to-maturity or available-for-sale at the time of purchase and reevaluates such designation periodically. Investments are classified as held-to-maturity when the Company has the intent and ability to hold the securities to maturity.

Investments in securities not classified as held-to-maturity are classified as available-for-sale. Available-for-sale securities are carried at fair value, with unrealized gains and losses, net of income taxes, reported in "Accumulated other comprehensive loss" in the consolidated balance sheets. Realized gains and losses, determined on a specific identification method, are included in "Interest income" in the consolidated statements of income.

The Company did not have any held-to-maturity securities as of December 31, 2011 or December 31, 2010.

Investments in available-for-sale securities at December 31, 2011 were as follows:

Available-for-sale securities	Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value
	(Dollars in millions)			
Current:				
Federal government securities	\$3.3	\$—	\$—	\$3.3
U.S. corporate bonds	3.9	—	—	3.9
Noncurrent:				
Marketable equity securities	66.5	—	(9.5) 57.0
Federal government securities	11.3	0.2	—	11.5
U.S. corporate bonds	7.7	0.1	—	7.8
Total	\$92.7	\$0.3	\$ (9.5) \$83.5

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Investments in available-for-sale securities at December 31, 2010 were as follows:

Available-for-sale securities	Cost	Gross Unrealized Gains (Dollars in millions)	Gross Unrealized Losses	Fair Value
Current:				
Federal government securities	\$0.5	\$—	\$—	\$0.5
U.S. corporate bonds	1.9	—	—	1.9
Noncurrent:				
Federal government securities	9.2	—	—	9.2
U.S. corporate bonds	6.3	—	—	6.3
Total	\$17.9	\$—	\$—	\$17.9

Contractual maturities for available-for-sale investments in debt securities at December 31, 2011 were as shown below. Expected maturities will differ from contractual maturities because borrowers may have the right to call or prepay obligations with or without call or prepayment penalties.

Contractual maturities for available-for-sale securities	Cost (Dollars in millions)	Fair Value
Due in one year or less	\$7.2	\$7.2
Due in one to five years	19.0	19.3
Total	\$26.2	\$26.5

The Company's investments in marketable equity securities consist of an investment in Winsway Coking Coal Holdings Limited.

Proceeds from sales of securities amounted to \$52.8 million and realized gains on the sales amounted to \$1.6 million for the year ended December 31, 2011.

In addition to the securities described above, the Company held investments in debt and equity securities related to the Company's pro-rata share of funding in the Newcastle Coal Infrastructure Group (NCIG). During the year ended December 31, 2011, the Company sold all of its previously held interests in these debt and equity securities. New debt securities were purchased for the funding of the next phase of NCIG's port expansion during the year ended December 31, 2011. These debt securities are recorded at cost, which approximates fair value, and are denominated in U.S. dollars. The fair value of these securities was \$29.4 million at December 31, 2011.

At each reporting date, the Company performs separate evaluations of debt and equity securities to determine if any unrealized losses are other-than-temporary. None of the securities that were in an unrealized loss position at December 31, 2011 has been so for greater than 12 months. The Company did not recognize any other-than-temporary losses on any of its investments during the year ended December 31, 2011.

(6) Derivatives and Fair Value Measurements

Risk Management — Non Coal Trading Activities

The Company is exposed to various types of risk in the normal course of business, including price risk on commodities utilized in the Company's operations, interest rate risk on long-term debt, and foreign currency exchange rate risk for non-U.S. dollar expenditures. In most cases, commodity price risk (excluding coal trading activities) related to the sale of coal is mitigated through the use of long-term, fixed-price contracts rather than through the use of financial instruments. For the price risk exposure on other commodities, as well as for the interest rate risk and foreign currency exchange rate risk, the Company utilizes financial derivative instruments to manage the risks related to these fluctuations. All of these risks are actively monitored in an effort to ensure compliance with the risk management policies of the Company.

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Interest Rate Swaps. The Company is exposed to interest rate risk on its fixed rate and variable rate long-term debt. From time to time, the Company manages the interest rate risk associated with the fair value of its fixed rate borrowings using fixed-to-floating interest rate swaps to effectively convert a portion of the underlying cash flows on the debt into variable rate cash flows. The Company designates these swaps as fair value hedges, with the objective of hedging against changes in the fair value of the fixed rate debt that results from market interest rate changes. From time to time, the interest rate risk associated with the Company's variable rate borrowings is managed using floating-to-fixed interest rate swaps. The Company designates these swaps as cash flow hedges, with the objective of reducing the variability of cash flows associated with market interest rate changes. As of December 31, 2011, the Company had no interest rate swaps in place.

Foreign Currency Hedges. The Company is exposed to foreign currency exchange rate risk, primarily on Australian dollar expenditures made in its Australian Mining segment. This risk is managed by entering into forward contracts and options that the Company designates as cash flow hedges, with the objective of reducing the variability of cash flows associated with forecasted foreign currency expenditures.

Diesel Fuel and Explosives Hedges. The Company is exposed to commodity price risk associated with diesel fuel and explosives in the U.S. and Australia. This risk is managed through the use of cost pass-through contracts and derivatives, primarily swaps. The Company generally designates the swap contracts as cash flow hedges, with the objective of reducing the variability of cash flows associated with forecasted diesel fuel and explosives purchases. In Australia, the explosives costs and a portion of the diesel fuel costs are not hedged as they are usually included in the fees paid to the Company's contract miners.

Notional Amounts and Fair Value. The following summarizes the Company's foreign currency and commodity positions at December 31, 2011:

	Notional Amount by Year of Maturity						
	Total	2012	2013	2014	2015	2016	2017 and thereafter
Foreign Currency							
A\$:US\$ hedge contracts (A\$ millions)	\$3,910.6	\$1,750.5	\$1,309.6	\$850.5	\$—	\$—	\$—
GBP:US\$ hedge contracts (GBP millions)	6.5	6.5	—	—	—	—	—
Commodity Contracts							
Diesel fuel hedge contracts (million gallons)	189.6	86.0	68.0	35.6	—	—	—
U.S. explosives hedge contracts (million MMBtu)	7.7	3.9	2.6	1.2	—	—	—

	Account Classification by			
	Cash Flow Hedge	Fair Value Hedge	Economic Hedge	Fair Value Asset (Liability)
				(Dollars in millions)
Foreign Currency				
A\$:US\$ hedge contracts (A\$ millions)	\$3,910.6	\$—	\$—	\$491.3
GBP:US\$ hedge contracts (GBP millions)	6.5	—	—	(0.7)
Commodity Contracts				
Diesel fuel hedge contracts (million gallons)	189.6	—	—	\$43.7
U.S. explosives hedge contracts (million MMBtu)	7.7	—	—	\$(10.7)

Hedge Ineffectiveness. The Company assesses, both at inception and at least quarterly thereafter, whether the derivatives used in hedging activities are highly effective at offsetting the changes in the anticipated cash flows of the

hedged item. The effective portion of the change in the fair value is recorded in “Accumulated other comprehensive loss” until the hedged transaction impacts reported earnings, at which time any gain or loss is also reclassified to earnings. To the extent that the periodic changes in the fair value of the derivatives exceed the changes in the hedged item, the ineffective portion of the periodic non-cash changes are recorded in earnings in the period of the change. If the hedge ceases to qualify for hedge accounting, the Company prospectively recognizes the mark-to-market movements in earnings in the period of the change.

F - 18

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

A measure of ineffectiveness is inherent in hedging future diesel fuel purchases with derivative positions based on crude oil and refined petroleum products as a result of location and product differences.

The Company's derivative positions for the hedging of future explosives purchases are based on natural gas, which is the primary price component of explosives. However, a small measure of ineffectiveness exists as the contractual purchase price includes manufacturing fees that are subject to periodic adjustments. In addition, other fees, such as transportation surcharges, can result in ineffectiveness, but have historically changed infrequently and comprise a small portion of the total explosives cost.

The Company's derivative positions for the hedging of forecasted foreign currency expenditures contain a small measure of ineffectiveness due to timing differences between the hedge settlement and the purchase transaction, which could differ by less than a day and up to a maximum of 30 days.

The tables below show the classification and amounts of pre-tax gains and losses related to the Company's non-trading hedges during the years ended December 31, 2011, 2010 and 2009:

		Year Ended December 31, 2011			
Financial Instrument	Income Statement Classification	Gain (loss) recognized in income on non-designated derivatives ⁽¹⁾	Gain (loss) recognized in other comprehensive income on derivative (effective portion)	Gain (loss) reclassified from other comprehensive income into (effective portion)	Gain (loss) reclassified from other comprehensive income into (ineffective portion)

Foreign currency cash flow hedge contracts	Operating costs and expenses	—	458.0	(30.8) —
Total		\$(2.7) \$ 523.7	\$(134.6) \$ 0.7

⁽³⁾ Amounts relate to diesel fuel and explosives hedge derivatives that were de-designated in 2009.

Based on the net fair value of the Company's non-coal trading positions held in "Accumulated other comprehensive loss" at December 31, 2011, unrealized gains to be reclassified from comprehensive income to earnings over the next 12 months associated with the Company's foreign currency and diesel fuel hedge programs are expected to be approximately \$266 million and \$43 million, respectively. The unrealized losses to be realized under the explosives hedge program are expected to be approximately \$6 million. As these unrealized gains are associated with derivative instruments that represent hedges of forecasted transactions, the amounts reclassified to earnings will partially offset the realized transactions, while the unrealized losses will add incremental expense to the consolidated statements of income.

The classification and amount of derivatives presented on a gross basis as of December 31, 2011 and 2010 are as follows:

Financial Instrument	Fair Value as of December 31, 2011			
	Current Assets	Noncurrent Assets	Current Liabilities	Noncurrent Liabilities
(Dollars in millions)				
Commodity swaps and options	\$43.4	\$11.7	\$7.1	\$15.0
Foreign currency cash flow hedge contracts	270.4	229.0	4.3	4.5
Total	\$313.8	\$240.7	\$11.4	\$19.5
Financial Instrument	Fair Value as of December 31, 2010			
	Current Assets	Noncurrent Assets	Current Liabilities	Noncurrent Liabilities
(Dollars in millions)				
Commodity swaps and options	25.8	27.0	12.0	0.6

Edgar Filing: PEABODY ENERGY CORP - Form 10-K

Foreign currency cash flow hedge contracts	273.5	366.6	—	—
Total	\$299.3	\$393.6	\$12.0	\$0.6

After netting by counterparty where permitted, the fair values of the respective derivatives are reflected in “Other current assets,” “Investments and other assets,” “Accounts payable and accrued expenses” and “Other noncurrent liabilities” in the consolidated balance sheets.

See Note 7 for information related to the Company’s coal trading activities.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Fair Value Measurements

The Company uses a three-level fair value hierarchy that categorizes assets and liabilities measured at fair value based on the observability of the inputs utilized in the valuation. These levels include: Level 1, inputs are quoted prices in active markets for the identical assets or liabilities; Level 2, inputs other than quoted prices included in Level 1 that are directly or indirectly observable through market-corroborated inputs; and Level 3, inputs are unobservable, or observable but cannot be market-corroborated, requiring the Company to make assumptions about pricing by market participants.

Financial Instruments Measured on a Recurring Basis. The following tables set forth the hierarchy of the Company's net financial asset (liability) positions for which fair value is measured on a recurring basis:

December 31, 2011				
	Level 1	Level 2	Level 3	Total
		(Dollars in millions)		
Investment in debt and equity securities	\$83.5	\$—	\$—	\$83.5
Commodity swaps and options	—	33.0	—	33.0
Foreign currency cash flow hedge contracts	—	490.6	—	490.6
Total net financial assets	\$83.5	\$523.6	\$—	\$607.1
December 31, 2010				
	Level 1	Level 2	Level 3	Total
		(Dollars in millions)		
Investment in debt securities	\$17.9	\$—	\$—	\$17.9
Commodity swaps and options	—	40.2	—	40.2
Foreign currency cash flow hedge contracts	—	640.1	—	640.1
Total net financial assets	\$17.9	\$680.3	\$—	\$698.2

For Level 1 and 2 financial assets and liabilities, the Company utilizes both direct and indirect observable price quotes, including interest rate yield curves, exchange indices, broker quotes, published indices and other market quotes. Below is a summary of the Company's valuation techniques for Level 1 and 2 financial assets and liabilities:

• Investment in debt and equity securities: valued based on quoted prices in active markets (Level 1).

• Commodity swaps and options — diesel fuel and explosives: generally valued based on a valuation that is corroborated by the use of market-based pricing (Level 2).

• Foreign currency hedge contracts: valued utilizing inputs obtained in quoted public markets (Level 2).

The Company did not have any transfers between levels during 2011, 2010 or 2009 for its non-coal trading positions.

The Company's policy is to value all transfers between levels using the beginning of period valuation.

Other Financial Instruments. The following methods and assumptions were used by the Company in estimating fair values for other financial instruments as of December 31, 2011 and 2010:

• Cash and cash equivalents, accounts receivable, including those within the Company's accounts receivable securitization program, and accounts payable and accrued expenses have carrying values which approximate fair value due to the short maturity or the liquid nature of these instruments.

• Investments in debt and equity securities related to the Company's pro-rata share of funding in NCIG are included in "Investments and other assets" in the consolidated balance sheets. The debt securities are recorded at cost, which approximates fair value.

• Long-term debt fair value estimates are based on observed prices for securities with an active trading market when available, and otherwise on estimated borrowing rates to discount the cash flows to their present value. The carrying amounts of the 7.875% Senior Notes due 2026 and the Convertible Junior Subordinated Debentures due 2066 (the Debentures) are net of the respective unamortized note discounts.

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

The carrying amounts and estimated fair values of the Company's debt are summarized as follows:

	December 31, 2011		December 31, 2010	
	Carrying Amount	Estimated Fair Value (Dollars in millions)	Carrying Amount	Estimated Fair Value
Long-term debt	\$6,657.5	\$6,922.7	\$2,750.0	\$2,960.0

Nonperformance and Credit Risk

The fair value of the Company's non-coal trading derivative assets and liabilities reflects adjustments for nonperformance and credit risk. The Company manages its counterparty risk through established credit standards, diversification of counterparties, utilizing investment grade commercial banks and continuous monitoring of counterparty creditworthiness. To reduce its credit exposure for these hedging activities, the Company seeks to enter into netting agreements with counterparties that permit the Company to offset asset and liability positions with such counterparties.

(7) Coal Trading

Risk Management

The Company engages in direct and brokered trading of coal, ocean freight and fuel-related commodities in over-the-counter markets (coal trading), some of which is subsequently exchange-cleared and some of which is bilaterally-settled. Except those for which the Company has elected to apply a normal purchases and normal sales exception, all derivative coal trading contracts are accounted for on a fair value basis.

The Company's policy is to include instruments associated with coal trading transactions as a part of its trading book. Trading revenues are recorded in "Other revenues" in the consolidated statements of income and include realized and unrealized gains and losses on derivative instruments, including coal deliveries related to contracts accounted for under the normal purchases and normal sales exception. Therefore, the Company has elected the trading exemption to reflect the disclosures for its coal trading activities.

Trading Revenue by Type of Instrument	Year Ended December 31,		
	2011	2010	2009
	(Dollars in millions)		
Commodity swaps and options	\$(41.4) \$23.2	\$176.5
Physical commodity purchase / sale contracts	187.0	135.5	85.0
Total trading revenue	\$145.6	\$158.7	\$261.5

Hedge Ineffectiveness. The Company assesses, both at inception and at least quarterly thereafter, whether the derivatives used in hedging activities are highly effective at offsetting the changes in the anticipated cash flows of the hedged item. The effective portion of the change in the fair value is recorded in "Accumulated other comprehensive loss" until the hedged transaction impacts reported earnings, at which time gains and losses are also reclassified to earnings. To the extent that the periodic changes in the fair value of the derivatives exceed the changes in the hedged item, the ineffective portion of the periodic non-cash changes are recorded in earnings in the period of the change. If the hedge ceases to qualify for hedge accounting, the Company prospectively recognizes the mark-to-market movements in earnings in the period of the change.

In some instances, the Company has designated an existing coal trading derivative as a hedge and, thus, the derivative has a non-zero fair value at hedge inception. The "off-market" nature of these derivatives, which is best described as an embedded financing element within the derivative, is a source of ineffectiveness. In other instances, the Company uses a coal trading derivative that settles at a different time, has different quality specifications, or has a different location basis than the occurrence of the cash flow being hedged. These collectively yield ineffectiveness to the extent that the derivative hedge contract does not exactly offset changes in the fair value or expected cash flows of the hedged item.

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Forecasted Transactions No Longer Probable. During 2011, the Company reclassified losses of \$10.0 million out of “Accumulated other comprehensive loss” to earnings as the underlying forecasted transactions were deemed no longer probable of occurring.

Fair Value Measurements

The fair value of assets and liabilities from coal trading activities is set forth below:

	December 31, 2011		2010	
	Gross Basis	Net Basis	Gross Basis	Net Basis
	(Dollars in millions)			
Assets from coal trading activities	\$170.4	\$44.6	\$1,706.2	\$192.5
Liabilities from coal trading activities	(84.0)) (10.3) (1,843.5) (181.7
Subtotal	86.4	34.3	(137.3) 10.8
Net margin posted (held) ⁽¹⁾	(52.1) —	148.1	—
Net value of coal trading positions	\$34.3	\$34.3	\$10.8	\$10.8

Represents margin held from exchanges of \$52.1 million at December 31, 2011; and margin posted with counterparties and exchanges of \$148.2 million, net of margin held of \$0.1 million at December 31, 2010. In addition, at December 31, 2010, the Company held letters of credit of \$5.0 million from counterparties in lieu of margin posted. Of the margin held at December 31, 2011, approximately \$23.4 million related to cash flow hedges. The Company’s trading assets and liabilities are generally made up of forward contracts, financial swaps and margin. The fair value of coal trading positions designated as cash flow hedges of forecasted sales was a liability of \$22.4 million and \$174.2 million as of December 31, 2011 and December 31, 2010, respectively. The decreases in the gross basis amounts were primarily due to positions being realized during the year, as well as the premature settlement of trades that were brokered by MF Global UK Limited (MF Global UK) due to it being placed into the United Kingdom's administration process (a process similar to bankruptcy proceedings in the U.S.). The Company subsequently entered into similar positions with a new broker. The settlements did not have a material impact on the Company's consolidated statements of income. For additional information regarding MF Global UK, see the "MF Global UK Limited" disclosure at the end of this note.

The following tables set forth the hierarchy of the Company’s net financial asset (liability) trading positions for which fair value is measured on a recurring basis:

	December 31, 2011			
	Level 1	Level 2	Level 3	Total
	(Dollars in millions)			
Commodity swaps and options	\$21.2	\$(1.9) \$—	\$19.3
Physical commodity purchase/sale contracts	—	6.3	8.7	15.0
Total net financial assets	\$21.2	\$4.4	\$8.7	\$34.3
	December 31, 2010			
	Level 1	Level 2	Level 3	Total
	(Dollars in millions)			
Commodity swaps and options	\$10.7	\$(76.2) \$—	\$(65.5
Physical commodity purchase/sale contracts	—	57.7	18.6	76.3
Total net financial assets (liabilities)	\$10.7	\$(18.5) \$18.6	\$10.8

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

For Level 1 and 2 financial assets and liabilities, the Company utilizes both direct and indirect observable price quotes, including U.S. interest rate curves, LIBOR yield curves, Chicago Mercantile Exchange (CME), New York Mercantile Exchange (NYMEX), Intercontinental Exchange indices (ICE), NOS Clearing ASA, LCH.Clearnet (formerly known as the London Clearing House), Singapore Exchange (SGX), broker quotes, published indices and other market quotes. Below is a summary of the Company's valuation techniques for Level 1 and 2 financial assets and liabilities:

• Commodity swaps and options — generally valued based on unadjusted quoted prices in active markets (Level 1) or a valuation that is corroborated by the use of market-based pricing (Level 2).

• Physical commodity purchase/sale contracts — purchases and sales at locations with significant market activity corroborated by market-based information (Level 2).

Commodity swaps and options and physical commodity purchase/sale contracts transacted in less liquid markets or contracts, such as long-term arrangements with limited price availability, are classified in Level 3. Indicators of less liquid markets are those with periods of low trade activity or when broker quotes reflect wide pricing spreads.

Generally, the Company's Level 3 instruments or contracts are valued using internally generated models that include bid/ask price quotations, other market assessments obtained from multiple, independent third-party brokers or other transactional data. While the Company does not anticipate any decrease in the number of third-party brokers or market liquidity, such events could erode the quality of market information and therefore the valuing of its market positions should the number of third-party brokers decrease or if market liquidity is reduced. The Company's valuation techniques also include basis adjustments for heat rate, sulfur and ash content, port and freight costs and credit and nonperformance risk. The Company validates its valuation inputs with third-party information and settlement prices from other sources where available. The Company has consistently applied these valuation techniques in all periods presented, and believes it has obtained the most accurate information available for the types of derivative contracts held.

The following table summarizes the changes in the Company's recurring Level 3 net financial assets:

	Year Ended December 31,		
	2011	2010	2009
	(Dollars in millions)		
Beginning of year	\$18.6	\$17.0	\$37.8
Total gains (losses) realized/unrealized:			
Included in earnings	8.9	2.1	(2.9)
Included in other comprehensive income	—	(0.5)	(1.6)
Settlements	(2.1)	(0.1)	(20.5)
Transfers in	1.0	—	—
Transfers out	(17.7)	0.1	4.2
End of year	\$8.7	\$18.6	\$17.0

The following table summarizes the changes in unrealized gains relating to Level 3 net financial assets held both as of the beginning and the end of the year:

	Year Ended December 31,		
	2011	2010	2009
	(Dollars in millions)		
Changes in unrealized gains ⁽¹⁾	\$8.7	\$6.7	\$15.6

Within the consolidated statements of income and consolidated statements of comprehensive income for the (1) periods presented, unrealized gains and losses from Level 3 items are combined with unrealized gains and losses on positions classified in Level 1 or 2, as well as other positions that have been realized during the applicable periods.

The Company did not have any significant transfers between Level 1 and Level 2 during 2011, 2010 or 2009. Certain of the Company's physical commodity purchase/sale contracts were transferred from Level 3 to Level 2 as the settlement dates entered a more liquid market. The Company's policy is to value all transfers between levels using the beginning of period valuation.

F - 24

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Based on the net fair value of the Company's coal trading positions held in "Accumulated other comprehensive loss" at December 31, 2011, unrealized losses to be reclassified from comprehensive income to earnings over the next 12 months are expected to be approximately \$2 million. As these unrealized losses are associated with derivative instruments that represent hedges of forecasted transactions, the amounts reclassified to earnings may partially offset the realized transactions in the consolidated statements of income.

As of December 31, 2011, the timing of the estimated future realization of the value of the Company's trading portfolio was as follows:

Year of Expiration	Percentage of Portfolio Total	
2012	65	%
2013	29	%
2014	4	%
2015	2	%
	100	%

Nonperformance and Credit Risk. The fair value of the Company's coal derivative assets and liabilities reflects adjustments for nonperformance and credit risk. The Company's exposure is substantially with electric utilities, steel producers, energy marketers and energy producers. The Company's policy is to independently evaluate each customer's creditworthiness prior to entering into transactions and to regularly monitor the credit extended. If the Company engages in a transaction with a counterparty that does not meet its credit standards, the Company seeks to protect its position by requiring the counterparty to provide an appropriate credit enhancement. Also, when appropriate (as determined by its credit management function), the Company has taken steps to reduce its exposure to customers or counterparties whose credit has deteriorated and who may pose a higher risk of failure to perform under their contractual obligations. These steps include obtaining letters of credit or cash collateral (margin), requiring prepayments for shipments or the creation of customer trust accounts held for the Company's benefit to serve as collateral in the event of a failure to pay or perform. To reduce its credit exposure related to trading and brokerage activities, the Company seeks to enter into netting agreements with counterparties that permit the Company to offset asset and liability positions with such counterparties and, to the extent required, will post or receive margin amounts associated with exchange-cleared positions.

At December 31, 2011, 78% of the Company's credit exposure related to coal trading activities with investment grade counterparties while 21% with non-investment grade counterparties and 1% was with counterparties that are not rated. **Performance Assurances and Collateral.** Certain of the Company's derivative trading instruments require the parties to provide additional performance assurances whenever a material adverse event jeopardizes one party's ability to perform under the instrument. If the Company were to sustain a material adverse event (using commercially reasonable standards), the counterparties could request collateralization on derivative trading instruments in net liability positions which, based on an aggregate fair value at December 31, 2011 and 2010, would have amounted to collateral postings of approximately \$11 million and \$160 million, respectively, to its counterparties. As of December 31, 2011, zero collateral was posted to counterparties for such positions while \$5.8 million was posted at December 31, 2010 (reflected in "Liabilities from coal trading activities, net").

Certain of the Company's other derivative trading instruments require the parties to provide additional performance assurances whenever a credit downgrade occurs below a certain level as specified in each underlying contract. The terms of such derivative trading instruments typically require additional collateralization, which is commensurate with the severity of the credit downgrade. If a credit downgrade were to have occurred below contractually specified levels, the Company's additional collateral requirement owed to its counterparties would have been zero at December 31, 2011 and December 31, 2010 based on the aggregate fair value of all derivative trading instruments with such features

that are in a net liability position. As such, the Company had no posting requirements for such instruments as of December 31, 2011. As of December 31, 2010, \$5.0 million of margin was posted with a counterparty due to timing and market fluctuations (reflected in "Liabilities from coal trading activities, net").

The Company is required to post collateral on positions that are in a net liability position with an exchange and is entitled to receive collateral on positions that are in a net asset position. This collateral is known as variation margin. At December 31, 2011, the Company was in a net asset position of \$52.1 million as compared to a net liability position of \$137.4 million at December 31, 2010. The margin held at December 31, 2011 is reflected in "Assets from coal trading activities, net" and the margin posted at December 31, 2010 is reflected in "Liabilities from coal trading activities, net."

F - 25

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

In addition, the Company is required by the exchange to post certain additional collateral, known as initial margin, which represents an estimate of potential future adverse price movements across the Company's portfolio under normal market conditions. As of December 31, 2011 and 2010, the Company had posted initial margin of \$34.0 million and \$39.5 million, respectively (reflected in "Other current assets"). In addition, the Company posted \$4.4 million of margin in excess of the exchange-required variation and initial margin discussed above as of December 31, 2010 (also reflected in "Other current assets").

MF Global UK Limited

In October 2011, MF Global UK, a United Kingdom (U.K.) based broker-dealer, was placed into the U.K.'s administration process (a process similar to bankruptcy proceedings in the U.S.) by the Financial Services Authority following the Chapter 11 bankruptcy filing of its U.S. parent, MF Global Holdings Ltd. The Company had used MF Global UK to broker certain of its coal trading transactions. The interruption of the Company's trading operations was limited as the Company opened new accounts with different brokerage firms and transferred its open trading positions formerly held with MF Global UK to those new accounts. While the open trading positions were transferred from MF Global UK successfully, the related margin posted by the Company has been retained by MF Global UK pending resolution of the Company's claims with the special administrators. The Company had funds remaining with MF Global UK totaling approximately \$53 million as of December 31, 2011, which is included in "Accounts receivable, net" in the consolidated balance sheets. The Company is pursuing collection and, due to the numerous uncertainties related to the claim, cannot reasonably estimate a potential reserve based upon information available as of the date of filing.

(8) Financing Receivables

At December 31, 2011, the Company had total financing receivables of \$376.1 million, of which \$51.3 million was included in "Accounts receivable, net", \$65.0 million was included in "Other current assets" and \$259.8 million was included in "Investments and other assets" in the consolidated balance sheets. The Company periodically assesses the collectability of accounts and loans receivable by considering factors such as specific evaluation of collectability, historical collection experience, the age of the receivable and other available evidence. Below is a description of the Company's financing receivables at December 31, 2011.

Codrilla Mine Project. In 2011, a wholly owned subsidiary of Macarthur completed the sale of its 85% interest in the Codrilla Mine Project to participants of the Coppabella Moorvale Joint Venture (CMJV) where Macarthur sold down its interest in the Codrilla project to the CMJV (Codrilla sell down) so that following completion of the sale, ownership of the Codrilla Mine Project reflected the existing ownership of the Coppabella and Moorvale mines, with Macarthur retaining a 73.3% ownership. Prior to the Company's acquisition of Macarthur, consideration of \$15.0 million (Australian dollars) was received by Macarthur upon completion of the Codrilla sell down, representing 20% of the agreed price. Two remaining installments are due on the completion of certain milestones, with 40% due on granting of the related mining lease and the final 40% due upon the mine's first coal shipment. There are currently no indications of impairment and the Company expects to receive full payment of amounts currently due. At December 31, 2011, \$34.2 million was included in "Accounts receivable, net" and \$35.6 million was included in "Investments and other assets" in the consolidated balance sheets.

Middlemount Mine. A wholly owned subsidiary of Macarthur periodically makes contributions to the Middlemount Mine joint venture for the purposes of funding capital expenditures and working capital, in line with the related shareholders' agreement. Middlemount intends to pay down the loans as excess cash is generated as required by the related shareholders' agreement. There are currently no indications of impairment and the Company expects to receive full payment of amounts currently due. At December 31, 2011, \$65.0 million was included in "Other current assets"

and \$224.2 million was included in "Investments and other assets" in the consolidated balance sheets.

Other Financing Receivables. From time to time, the Company may enter into transactions resulting in accounts or notes receivable held by the Company. These notes are generally short term in nature with positive historical collection experience and do not represent a material credit risk to the Company.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

(9)Income Taxes

Income from continuing operations before income taxes consisted of the following:

	Year Ended December 31,		
	2011	2010	2009
	(Dollars in millions)		
U.S.	\$815.7	\$535.5	\$281.4
Non-U.S.	558.0	606.5	348.0
Total	\$1,373.7	\$1,142.0	\$629.4

Total income tax provision consisted of the following:

	Year Ended December 31,		
	2011	2010	2009
	(Dollars in millions)		
Current:			
U.S. federal	\$103.4	\$113.9	\$(0.7)
Non-U.S.	58.9	78.8	50.0
State	12.2	1.0	1.7
Total current	174.5	193.7	51.0
Deferred:			
U.S. federal	138.0	47.9	56.0
Non-U.S.	42.8	68.1	78.5
State	7.9	5.7	0.7
Total deferred	188.7	121.7	135.2
Total provision	\$363.2	\$315.4	\$186.2

The following is a reconciliation of the expected statutory federal income tax provision to the Company's actual income tax provision:

	Year Ended December 31,		
	2011	2010	2009
	(Dollars in millions)		
Expected income tax provision at federal statutory rate	\$480.8	\$399.7	\$220.3
Excess depletion	(70.8)) (53.5)) (44.0)
Foreign earnings provision differential	(99.2)) (124.5)) (83.4)
Foreign earnings repatriation	7.6	84.5	—
Remeasurement of foreign income tax accounts	(0.9)) 47.9	74.4

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

The tax effects of temporary differences that give rise to significant portions of the deferred tax assets and liabilities consisted of the following:

	December 31,	
	2011	2010
	(Dollars in millions)	
Deferred tax assets:		
Tax credits and loss carryforwards	\$432.8	\$425.2
Postretirement benefit obligations	485.4	427.7
Intangible tax asset and purchased contract rights	10.6	15.1
Accrued reclamation and mine closing liabilities	114.6	97.8
Accrued long-term workers' compensation liabilities	15.6	15.5
Employee benefits	53.3	53.5
Hedge activities	—	30.6
Financial guarantee	18.5	18.8
Others	57.9	45.4
Total gross deferred tax assets	1,188.7	1,129.6
Deferred tax liabilities:		
Property, plant, equipment and mine development, leased coal interests and advance royalties, principally due to differences in depreciation, depletion and asset writedowns	1,348.0	1,246.8
Unamortized discount on Convertible Junior Subordinated Debentures	132.5	135.5
Hedge activities	45.5	—
Investments and other assets	109.8	107.0
Total gross deferred tax liabilities	1,635.8	1,489.3
Valuation allowance	(79.8)	(65.0)
Net deferred tax liability	\$(526.9)	\$(424.7)
Deferred taxes are classified as follows:		
Current deferred income taxes	\$27.3	\$120.4
Noncurrent deferred income taxes	(554.2)	(545.1)
Net deferred tax liability	\$(526.9)	\$(424.7)

The Company's tax credits and loss carryforwards included alternative minimum tax (AMT), foreign tax and general business credits of \$300.0 million, state net operating loss (NOL) carryforwards of \$23.5 million and foreign loss carryforwards of \$109.3 million as of December 31, 2011. The AMT credits, foreign NOL, and capital loss carryforwards have no expiration date. The foreign tax and general business credits begin to expire in 2020 and 2027, respectively. The state NOL carryforwards begin to expire in the year 2012. In assessing the near term use of NOLs and tax credits and corresponding valuation allowance adjustments, the Company evaluated the overall deferred tax position, available tax strategies and future taxable income. The \$15.4 million change in the valuation allowance was due to an increase on foreign deferred tax assets. The remaining valuation allowance at December 31, 2011 of \$79.8 million represents a reserve for state NOLs and certain foreign deferred tax assets.

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Unrecognized Tax Benefits

The total amount of the net unrecognized tax benefits was \$114.7 million (\$119.6 million gross) at December 31, 2011 and was \$107.9 million (\$111.0 million gross) at December 31, 2010. The amount of the Company's gross unrecognized tax benefits has increased by \$8.6 million since January 1, 2011 due to additions for current and prior year positions. The amount of the net unrecognized tax benefits that, if recognized, would directly affect the effective tax rate is \$114.7 million at December 31, 2011 and \$107.9 million at December 31, 2010. A reconciliation of the beginning and ending amount of gross unrecognized tax benefits is as follows (dollars in millions):

	Year Ended December 31,		
	2011	2010	2009
Balance at beginning of period	\$111.0	\$113.2	\$186.3
Additions for current year tax positions	5.2	3.4	2.7
Additions for prior year positions	3.4	13.8	15.7
Reductions for settlements with tax authorities	—	(19.4)	(88.5)
Reductions for expirations of statute of limitations	—	—	(3.0)
Balance at end of period	\$119.6	\$111.0	\$113.2

The Company recognizes interest and penalties accrued related to unrecognized tax benefits in its income tax provision. The Company has recognized \$11.4 million of interest for the year ended December 31, 2011. The Company had \$26.0 million and \$14.6 million of accrued interest related to uncertain tax positions at December 31, 2011 and 2010, respectively. The Company has considered the application of penalties on its unrecognized tax benefits and determined, based upon several factors, that no accrual of penalties is required.

Tax Returns Subject to Examination

The Company's federal income tax returns are under examination by the Internal Revenue Service (IRS) for the 2006 through 2008 income tax years. The Company's Australian income tax returns for the tax years 2004 through 2010 are under examination by the Australian Tax Office (ATO). The 2006 IRS audit remains open awaiting the IRS appeals decision for the 2006 proposed adjustment of interest income accrued by a foreign subsidiary. Should the IRS position ultimately be sustained at the conclusion of the appeals process, additional income tax charges would be required to the extent the Company's NOL carryforwards are reduced. The 2007-2008 IRS audit was substantially complete at December 31, 2011 with no significant adjustments proposed by the IRS. The ATO is reviewing a transaction resulting in a foreign currency loss, interest rates on intercompany loans and certain intercompany charges. No formal adjustments have been proposed as of December 31, 2011. The Company believes it is reasonably possible one or both of these audits will be completed or settled during the next 12 months resulting in a potential decrease to its net unrecognized tax benefits of up to \$30 million.

Notwithstanding these audit cycles, the years 1999-2001, 2003 through 2004, 2009 and 2010 remain potentially subject to examination due to NOL carryforwards. The Company's state income tax returns for the tax years 1996 and beyond remain potentially subject to examination by various state taxing authorities due to NOL carryforwards.

Foreign Earnings

The total amount of undistributed earnings of foreign subsidiaries for income tax purposes was \$1.3 billion at December 31, 2011 and \$1.1 billion at December 31, 2010. The Company has not provided deferred taxes on foreign earnings of \$1.3 billion for 2011 and \$1.1 billion for 2010 because such earnings are considered to be indefinitely reinvested outside the U.S. Should the Company repatriate all of these earnings, a one-time income tax charge of up to \$450.7 million could occur.

Fair value hedge adjustment	—	2.2
Other	43.4	45.8
Total	\$6,657.5	\$2,750.0

Credit Facility

On June 18, 2010, the Company entered into an unsecured credit agreement (the Credit Agreement) which established a \$2.0 billion credit facility (the Credit Facility) and replaced the Company's third amended and restated credit agreement dated as of September 15, 2006. The Credit Agreement provides for a \$1.5 billion revolving credit facility (the Revolver) and a \$500.0 million term loan facility (the Term Loan). The Company has the option to request an increase in the capacity of the Credit Facility, provided the aggregate increase for the Revolver and Term Loan does not exceed \$250.0 million, the minimum amount of the increase is \$25.0 million, and certain other conditions are met under the Credit Agreement. The Revolver also includes a swingline sub-facility under which up to \$50.0 million is available for same-day borrowings. The Revolver commitments and the Term Loan under the Credit Facility will mature on June 18, 2015.

The Revolver replaced the Company's previous \$1.8 billion revolving credit facility and the Term Loan replaced the Company's previous term loan facility (the previous term loan had a balance of \$490.3 million at the time of replacement). The Company recorded \$21.9 million in deferred financing costs, which are being amortized to interest expense over the five-year term of the Credit Facility. The Company also recorded refinancing charges of \$9.3 million, which was recorded in "Interest expense" in the 2010 consolidated statements of income. The \$500.0 million of proceeds from the Term Loan was used to repay the balance due on the Company's previous term loan facility. All borrowings under the Credit Agreement (other than swingline borrowings and borrowings denominated in currencies other than U.S. dollars) bear interest, at the Company's option, at either a "base rate" or a "eurocurrency rate", as defined in the Credit Agreement, plus in each case, a rate adjustment based on the Company's leverage ratio, as defined in the Credit Agreement, ranging from 2.50% to 1.30% per year for borrowings bearing interest at the "base rate" and from 3.50% to 2.25% per year for borrowings bearing interest at the "eurocurrency rate" (such rate added to the "eurocurrency rate," the "Eurocurrency Margin"). Swingline borrowings bear interest at a "BBA LIBOR" rate equal to the rate at which deposits in U.S. dollars for a one month term are offered in the interbank eurodollar market, as determined by the administrative agent, plus the Eurocurrency Margin. Borrowings denominated in currencies other than U.S. dollars will bear interest at the "eurocurrency rate" plus the Eurocurrency Margin.

F - 31

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

The Company pays a usage-dependent commitment fee under the Revolver, which is dependent upon the Company's leverage ratio, as defined in the Credit Agreement, and ranges from 0.500% to 0.375% of the available unused commitment. Swingline loans are not considered usage of the revolving credit facility for purposes of calculating the commitment fee. The fee accrues quarterly in arrears.

In addition, the Company pays a letter of credit fee calculated at a rate dependent on the Company's leverage ratio, as defined in the Credit Agreement, ranging from 3.50% to 2.25% per year of the undrawn amount of each letter of credit and a fronting fee equal to 0.125% per year of the face amount of each letter of credit. These fees are payable quarterly in arrears.

The Term Loan is voluntarily prepayable from time to time without any premium or penalty, subject to certain customary reimbursements of the lenders' costs. The Term Loan, which is subject to quarterly repayment of 1.25% per quarter, commenced on December 31, 2010, with the final payment of all amounts outstanding (including accrued interest) being due on June 18, 2015.

Under the Credit Agreement, the Company must comply with certain financial covenants on a quarterly basis including a minimum interest coverage ratio and a maximum leverage ratio. The Credit Agreement also includes various affirmative and negative covenants that place limitations on the Company's ability to, among other things, incur debt; make loans, investments, advances and acquisitions; sell assets; make redemptions and repurchases of capital stock; engage in mergers or consolidations; engage in affiliate transactions and restrict distributions from subsidiaries. When in compliance with the financial covenants and customary default provisions, the Company is not restricted in its ability to pay dividends, sell assets and make redemptions or repurchase capital stock provided that the Company may only redeem and repurchase capital stock with the proceeds received from the concurrent issue of capital stock or indebtedness permitted under the Credit Agreement.

Nearly all of the Company's direct and indirect domestic subsidiaries guarantee all loans under the Credit Agreement. Certain of the Company's foreign subsidiaries also, to the extent permitted by applicable law and existing contractual obligations, would be guarantors of loans made to one of the Company's Dutch subsidiaries.

As of December 31, 2011, the Company had no borrowings on the Revolver, but had \$21.0 million of letters of credit outstanding. The remaining capacity on the Revolver at December 31, 2011 was \$1.5 billion.

The interest rate payable on the Revolver and the Term Loan was LIBOR plus 2.25%, or 2.51% at December 31, 2011.

2011 Term Loan Facility

On October 28, 2011, the Company entered into the 2011 Term Loan Facility that provides for borrowings up to \$1.0 billion. The Company borrowed \$1.0 billion under the 2011 Term Loan Facility to finance, in part, the acquisition of Macarthur. Borrowings under the 2011 Term Loan Facility bear interest, at the Company's option, at a rate equal to (i) LIBOR plus an applicable margin or (ii) a base rate (defined as the highest of (a) the Bank of America prime rate, (b) the Federal Funds rate plus 0.50% and (c) one month LIBOR plus 1.00%) plus an applicable margin. The applicable margin depends on the ratio of the Company's consolidated debt to its adjusted consolidated EBITDA, and may range from 1.75% to 3.00% per year for borrowings bearing interest at LIBOR and from 0.75% to 2.00% per year for borrowings bearing interest at the base rate, as defined in the 2011 Term Loan Facility.

The obligations under the 2011 Term Loan Facility are unsecured and are guaranteed by the Company's direct and indirect domestic subsidiaries that guarantee the Credit Facility. The 2011 Term Loan Facility contains covenants, including financial covenants, and events of default substantially the same as those set forth in the Credit Facility. The 2011 Term Loan Facility is voluntarily prepayable from time to time without premium or penalty, subject to certain customary reimbursements of the lenders' costs. The 2011 Term Loan Facility will be subject to quarterly repayment of 1.25% commencing April 28, 2012, with the final payment of all amounts outstanding due October 28, 2016.

As of December 31, 2011, the Company had \$1.0 billion outstanding on the 2011 Term Loan Facility with an interest rate payable of LIBOR plus 2.0%, or 2.26%.

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

5.875% Senior Notes

On April 15, 2011, the Company used cash on hand to redeem its 5.875% Senior Notes due in April 2016 (the 5.875% Notes) in the aggregate principal amount of \$218.1 million. In compliance with the terms of the indenture governing the 5.875% Notes, the redemption price was equal to 100.979% of the aggregate principal amount of the 5.875% Notes plus accrued and unpaid interest to April 15, 2011. The Company recognized costs of \$1.7 million associated with the redemption.

6.00%, 6.25%, 6.50%, 7.375% and 7.875% Senior Notes (collectively the Senior Notes)

The Senior Notes are senior unsecured obligations and rank senior in right of payment to any subordinated indebtedness; equally in right of payment with any senior indebtedness; are effectively junior in right of payment to the Company's future secured indebtedness, to the extent of the value of the collateral securing that indebtedness; and effectively junior to all the indebtedness and other liabilities of its subsidiaries that do not guarantee the notes.

The Senior Notes are jointly and severally guaranteed by nearly all of the Company's domestic subsidiaries, as defined in the note indentures. The note indentures contain covenants that, among other things, limit the Company's ability to create liens and enter into sale and lease-back transactions. The Senior Notes are redeemable at a redemption price equal to 100% of the principal amount of the notes being redeemed plus a make-whole premium and any accrued unpaid interest to the redemption date. If the Company experiences specific kinds of changes in control and the credit rating assigned to the Senior Notes declines below specified levels within 90 days of that time, holders of such notes have the right to require the Company to repurchase their notes at a repurchase price equal to 101% of their principal amount, plus accrued and unpaid interest, if any, to the date of repurchase.

Interest payments on the Senior Notes are scheduled to occur each year as follows:

Senior Notes	Interest Payment Dates
6.00% Senior Notes	May 15 and November 15
6.25% Senior Notes	May 15 and November 15
6.50% Senior Notes	March 15 and September 15
7.375% Senior Notes	May 1 and November 1
7.875% Senior Notes	May 1 and November 1

On November 15, 2011, the Company completed a \$1.6 billion offering of 6.00% Senior Notes due November 2018 (the 6.00% Senior Notes) and a \$1.5 billion offering of 6.25% Senior Notes due November 2021 (the 6.25% Senior Notes), with the proceeds of the offering used, in part, to finance the acquisition of Macarthur. On the same date, the Company, the Guarantors and the initial purchasers of the 6.00% Senior Notes and the 6.25% Senior Notes entered into a registration rights agreement (the Registration Rights Agreement). Subject to the terms of the Registration Rights Agreement, the Company will use its reasonable best efforts to register with the Securities and Exchange Commission exchange notes having substantially identical terms as the 6.00% Senior Notes and the 6.25% Senior Notes and to exchange freely tradeable exchange notes for such notes within 365 days after the issue date of the 6.00% Senior Notes and the 6.25% Senior Notes (effectiveness target date). If the Company fails to meet the effectiveness target date (a registration default), the annual interest rate on the 6.00% Senior Notes and the 6.25% Senior Notes will increase by 0.25% for each 90-day period during which the default continues, up to a maximum additional interest rate of 1.0% until the registration default is cured.

On August 25, 2010, the Company completed a \$650.0 million offering of 6.50% Senior Notes due September 2020 (the 6.50% Senior Notes). The Company used the net proceeds of \$641.9 million from the issuance of the 6.50% Senior Notes, after deducting underwriting discounts and expenses, and cash on hand to extinguish its previously outstanding \$650.0 million aggregate principal 6.875% Senior Notes formerly due in March 2013 (the 2013 Notes). All of the 2013 Notes were either tendered or redeemed during 2010. The Company recognized debt extinguishment

costs of \$8.4 million, which was recorded in “Interest expense” in the consolidated statements of income. The issuance of the 6.50% Senior Notes and the extinguishment of the 2013 Notes allowed the Company to extend the maturity of its senior indebtedness and lower the coupon rate.

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Convertible Junior Subordinated Debentures

As of December 31, 2011, the Company had \$732.5 million aggregate principal outstanding of Debentures that generally require interest to be paid semiannually at a rate of 4.75% per year. The Company may elect to, and to the extent that a mandatory trigger event (as defined in the indenture governing the Debentures) has occurred and is continuing will be required to, defer interest payments on the Debentures. After five years of deferral at the Company's option, or upon the occurrence of a mandatory trigger event, the Company generally must sell warrants or preferred stock with specified characteristics and use the funds from that sale to pay deferred interest, subject to certain limitations. In no event may the Company defer payments of interest on the Debentures for more than 10 years. The Debentures are convertible at any time on or prior to December 15, 2036 if any of the following conditions occur: (i) the Company's closing common stock price exceeds 140% of the then applicable conversion price for the Debentures (currently \$81.47 per share) for at least 20 of the final 30 trading days in any quarter; (ii) a notice of redemption is issued with respect to the Debentures; (iii) a change of control, as defined in the indenture governing the Debentures; (iv) satisfaction of certain trading price conditions; and (v) other specified corporate transactions described in the indenture governing the Debentures. In addition, the Debentures are convertible at any time after December 15, 2036 to December 15, 2041, the scheduled maturity date. In the case of conversion following a notice of redemption or upon a non-stock change of control, as defined in the indenture governing the Debentures, holders may convert their Debentures into cash in the amount of the principal amount of their Debentures and shares of the Company's common stock for any conversion value in excess of the principal amount. In all other conversion circumstances, holders will receive perpetual preferred stock (see Note 16) with a liquidation preference equal to the principal amount of their Debentures, and any conversion value in excess of the principal amount will be settled with the Company's common stock. As a result of the Patriot Coal Corp. (Patriot) spin-off, the conversion rate was adjusted. The conversion rate has also been adjusted when there has been a change in the Company's dividend distribution rate. The current conversion rate is 17.1846 shares of common stock per \$1,000 principal amount of Debentures effective February 7, 2012. This adjusted conversion rate represents a conversion price of \$58.19.

The Debentures are not subject to redemption prior to December 20, 2011. Between December 20, 2011 and December 19, 2036, the Company may redeem the Debentures, in whole or in part, if for at least 20 out of the 30 consecutive trading days immediately prior to the date on which notice of redemption is given, the Company's closing common stock price has exceeded 130% of the then applicable conversion price for the Debentures (currently \$75.65 per share). On or after December 20, 2036, whether or not the redemption condition is satisfied, the Company may redeem the Debentures, in whole or in part. The Company may not redeem any Debentures unless (i) all accrued and unpaid interest on the Debentures has been paid in full on or prior to the redemption date and (ii) if any perpetual preferred stock is outstanding, the Company has first given notice to redeem the perpetual preferred stock in the same proportion as the redemption of the Debentures. Any redemption of the Debentures will be at a cash redemption price of 100% of the principal amount of the Debentures to be redeemed, plus accrued and unpaid interest to the date of redemption.

On December 15, 2041, the scheduled maturity date, the Company will use commercially reasonable efforts, subject to the occurrence of a market disruption event, as defined in the indenture governing the Debentures, to issue securities of equivalent equity content in an amount sufficient to pay the principal amount of the Debentures, together with accrued and unpaid interest. At the final maturity date of the Debentures on December 15, 2066, the entire principal amount will become due and payable, together with accrued and unpaid interest.

In connection with the issuance of the Debentures, the Company entered into a Capital Replacement Covenant (the CRC). Pursuant to the CRC, the Company covenanted for the benefit of holders of covered debt, as defined in the CRC (currently the Company's 7.875% Senior Notes, issued in the aggregate principal amount of \$250.0 million), that

neither the Company nor any of its subsidiaries shall repay, redeem or repurchase all or any part of the Debentures on or after December 15, 2041 and prior to December 15, 2046, except to the extent that the total repayment, redemption or repurchase price does not exceed the sum of: (i) 400% of the Company's net cash proceeds from the sale of its common stock and rights to acquire its common stock (including common stock issued pursuant to the Company's dividend reinvestment plan or employee benefit plans); (ii) the Company's net cash proceeds from the sale of its mandatorily convertible preferred stock, as defined in the CRC, or debt exchangeable for equity, as defined in the CRC; and (iii) the Company's net cash proceeds from the sale of other replacement capital securities, as defined in the CRC, in each case, during the six months prior to the notice date for the relevant payment, redemption or repurchase.

F - 34

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

The Debentures are unsecured obligations of the Company, ranking junior to all existing and future senior and subordinated debt (excluding trade accounts payable or accrued liabilities arising in the ordinary course of business) except for any future debt that ranks equal to or junior to the Debentures. The Debentures will rank equal in right of payment with the Company's obligations to trade creditors. Substantially all of the Company's existing indebtedness is senior to the Debentures. In addition, the Debentures will be effectively subordinated to all indebtedness of the Company's subsidiaries. The indenture governing the Debentures places no limitation on the amount of additional indebtedness that the Company or any of the Company's subsidiaries may incur.

The Company accounts for the liability and equity components of the Debentures in a manner that reflects the nonconvertible debt borrowing rate when recognizing interest cost in subsequent periods. The following table illustrates the carrying amount of the equity and debt components of the Debentures:

	December 31,	
	2011	2010
	(Dollars in millions)	
Carrying amount of the equity component	\$215.4	\$215.4
Principal amount of the liability component	\$732.5	\$732.5
Unamortized discount	(357.3)	(359.2)
Net carrying amount	\$375.2	\$373.3

The following table illustrates the effective interest rate and the interest expense related to the Debentures:

	Year Ended December 31,		
	2011	2010	2009
	(Dollars in millions)		
Effective interest rate	4.9	% 4.9	% 4.9
Interest expense — contractual interest coupon	\$34.8	\$34.8	\$34.8
Interest expense — amortization of debt discount	1.9	1.8	1.6

The remaining period over which the discount will be amortized is 30 years as of December 31, 2011.

Macarthur Corporate Funding Facility

With the acquisition of Macarthur, the Company assumed Macarthur's three year \$330.0 million (Australian dollar) Corporate Funding Facility that has a maturity date of November 30, 2013. As of December 31, 2011, the Company had no borrowings under the Macarthur Corporate Funding Facility. The Macarthur Corporate Funding Facility has a \$130.0 million (Australian dollar) sub-limit for bank guarantees, leaving an available capacity of \$200.0 million (Australian dollars) at December 31, 2011. Letters of credit and cash backed bank guarantees totaling \$65.0 million (Australian dollars) were outstanding as of December 31, 2011. The Company plans to terminate the Macarthur Corporate Funding Facility in 2012.

Capital Lease Obligations

Capital lease obligations are for mining equipment (see Note 12 for additional information).

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Debt Maturities, Interest Paid, and Financing Costs

The aggregate amounts of long-term debt maturities (including unamortized debt discounts) subsequent to December 31, 2011, including capital lease obligations, were as follows:

Year of Maturity	(Dollars in millions)
2012	\$ 101.1
2013	121.9
2014	107.8
2015	458.5
2016	1,475.7
2017 and thereafter	4,392.5
Total	\$6,657.5

Interest paid on long-term debt was \$205.3 million, \$197.9 million and \$201.6 million for the years ended December 31, 2011, 2010 and 2009, respectively.

Financing costs incurred with the issuance of the Company's debt are being amortized to interest expense over the remaining term of the associated debt. The remaining balance at December 31, 2011 was \$99.9 million, of which \$69.2 million will be amortized to interest expense over the next five years.

(12) Leases

The Company leases equipment and facilities under various noncancelable lease agreements. Certain lease agreements require the maintenance of specified ratios and contain restrictive covenants which limit indebtedness, subsidiary dividends, investments, asset sales and other Company actions. Rental expense under operating leases was \$170.6 million, \$129.5 million and \$116.6 million for the years ended December 31, 2011, 2010 and 2009, respectively. The gross value of property, plant, equipment and mine development assets under capital leases was \$297.0 million as of December 31, 2011 and \$109.5 million as of December 31, 2010, related primarily to the leasing of mining equipment. The accumulated depreciation for these items was \$58.9 million and \$39.5 million at December 31, 2011 and 2010, respectively.

The Company also leases coal reserves under agreements that require royalties to be paid as the coal is mined. Certain agreements also require minimum annual royalties to be paid regardless of the amount of coal mined during the year. Total royalty expense was \$610.6 million, \$540.6 million and \$428.6 million for the years ended December 31, 2011, 2010 and 2009, respectively.

A substantial amount of the coal mined by the Company is produced from mineral reserves leased from the owner. One of the major lessors is the U.S. government, from which the Company leases substantially all of the coal it mines in Wyoming under terms set by Congress and administered by the U.S. Bureau of Land Management. These leases are generally for an initial term of ten years but may be extended by diligent development and mining of the reserves until all economically recoverable reserves are depleted. The Company has met the diligent development requirements for substantially all of these federal leases either directly through production, by including the lease as a part of a logical mining unit with other leases upon which development has occurred, or by paying an advance royalty in lieu of continued operations. Annual production on these federal leases must total at least 1.0% of the original amount of coal in the entire logical mining unit. In addition, royalties are payable monthly at a rate of 12.5% of the gross realization from the sale of the coal mined using surface mining methods and at a rate of 8.0% of the gross realization for coal produced using underground mining methods. The Company also leases coal reserves in Arizona from The Navajo Nation and the Hopi Tribe under leases that are administered by the U.S. Department of the Interior. These leases expire upon exhaustion of the leased reserves or upon the permanent ceasing of all mining activities on the related

reserves as a whole. The royalty rates are also generally based upon a percentage of the gross realization from the sale of coal. These rates are subject to redetermination every ten years under the terms of the leases. The remainder of the leased coal is generally leased from state governments, land holding companies and various individuals. The duration of these leases varies greatly. Typically, the lease terms are automatically extended as long as active mining continues. Royalty payments are generally based upon a specified rate per ton or a percentage of the gross realization from the sale of the coal.

F - 36

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Mining and exploration in Australia is generally executed under leases or licenses granted by state governments. Mining leases are typically for an initial term of up to 21 years (but which may be renewed) and contain conditions relating to such matters as minimum annual expenditures, restoration and rehabilitation. Royalties are paid to the state government as a percentage of the sales price. Generally landowners do not own the mineral rights or have the ability to grant rights to mine those minerals. These rights are retained by state governments. Compensation is payable to landowners for the loss of access to the land where the landowner retains the surface rights, and the amount and type of compensation can be determined by agreement or arbitration as provided in the mining law. Surface rights are typically acquired directly from landowners by mutual agreement.

Future minimum lease and royalty payments as of December 31, 2011 are as follows:

Year Ending December 31,	Capital Leases	Operating Leases	Coal Lease and Royalty Obligations
	(Dollars in millions)		
2012	\$32.3	\$123.1	\$50.7
2013	41.3	106.2	50.0
2014	25.9	90.6	48.8
2015	10.5	76.4	46.6
2016	10.3	63.5	3.8
2017 and thereafter	21.7	151.1	27.9
Total minimum lease payments	142.0	\$610.9	\$227.8
Less interest	19.5		
Present value of minimum capital lease payments	\$122.5		

As of December 31, 2011, certain of the Company's lease obligations were secured by outstanding surety bonds totaling \$104.7 million.

(13) Asset Retirement Obligations

Reconciliations of the Company's ARO liability are as follows:

	December 31,	
	2011	2010
	(Dollars in millions)	
Balance at beginning of year	\$490.7	\$447.6
Liabilities incurred or acquired	43.0	8.2
Liabilities settled or disposed	(8.8) (8.7
Accretion expense	28.7	26.4
Revisions to estimates	67.7	17.2
Balance at end of year	\$621.3	\$490.7
Balance at end of year — active locations	\$574.0	\$438.2
Balance at end of year — closed or inactive locations	\$47.3	\$52.5

The credit-adjusted, risk-free interest rates were 5.76%, 6.37%, and 7.92% at December 31, 2011, 2010 and 2009, respectively.

As of December 31, 2011 and 2010, the Company had \$791.6 million and \$704.4 million, respectively, in surety bonds and bank guarantees outstanding to secure reclamation obligations or activities. The amount of reclamation self-bonding in certain states in which the Company qualifies was \$929.6 million and \$920.3 million as of December 31, 2011 and 2010, respectively. Additionally, the Company had \$0.1 million of letters of credit in support

of reclamation obligations or activities as of December 31, 2010.

(14) Postretirement Health Care and Life Insurance Benefits

The Company currently provides health care and life insurance benefits to qualifying salaried and hourly retirees and their dependents from benefit plans established by the Company. Plan coverage for health benefits is provided to future hourly and salaried retirees in accordance with the applicable plan document. Life insurance benefits are provided to future hourly retirees in accordance with the applicable labor agreement.

Net periodic postretirement benefit cost included the following components:

	Year Ended December 31,		
	2011	2010	2009
	(Dollars in millions)		
Service cost for benefits earned	\$13.9	\$12.9	\$10.5
Interest cost on accumulated postretirement benefit obligation	57.9	58.2	55.2
Amortization of prior service cost	2.8	2.6	1.5
Amortization of actuarial loss	26.9	24.9	14.5
Net periodic postretirement benefit cost	\$101.5	\$98.6	\$81.7

The following includes amounts recognized in accumulated other comprehensive loss:

	Year Ended December 31,		
	2011	2010	2009
	(Dollars in millions)		
Net actuarial loss arising during year	\$86.0	\$45.3	\$165.2
Prior service cost arising during year	(1.4)) 7.9	(10.5)
Amortization:			
Actuarial loss	(26.9)) (24.9)) (14.5)
Prior service cost	(2.8)) (2.6)) (1.5)
Total recognized in other comprehensive loss	54.9	25.7	138.7
Net periodic postretirement benefit cost	101.5	98.6	81.7
Total recognized in net periodic postretirement benefit cost and other comprehensive loss	\$156.4	\$124.3	\$220.4

The Company amortizes actuarial gain and loss using a 0% corridor with an amortization period that covers the average future working lifetime of active employees (11.70 years and 12.06 years at January 1, 2012 and 2011, respectively). The estimated net actuarial loss and prior service cost that will be amortized from accumulated other comprehensive loss into net periodic postretirement benefit cost during the year ended December 31, 2012 are \$32.8 million and \$2.5 million, respectively.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

The following table sets forth the plan's funded status reconciled with the amounts shown in the consolidated balance sheets:

	December 31, 2011 2010 (Dollars in millions)	
Change in benefit obligation:		
Accumulated postretirement benefit obligation at beginning of period	\$1,031.2	\$982.2
Service cost	13.9	12.9
Interest cost	57.9	58.2
Participant contributions	1.9	2.1
Plan amendments ⁽¹⁾	(1.4) 7.9
Benefits paid	(68.0) (77.4
Actuarial loss	86.0	45.3
Accumulated postretirement benefit obligation at end of period	1,121.5	1,031.2
Change in plan assets:		
Fair value of plan assets at beginning of period	—	—
Employer contributions	66.1	75.3
Participant contributions	1.9	2.1
Benefits paid and administrative fees (net of Medicare Part D reimbursements)	(68.0) (77.4
Fair value of plan assets at end of period	—	—
Funded status at end of year	(1,121.5) (1,031.2
Less current portion (included in Accounts payable and accrued expenses)	68.4	67.3
Noncurrent obligation (included in Accrued postretirement benefit costs)	\$(1,053.1) \$(963.9

⁽¹⁾ Effective January 1, 2011, certain plans were modified to ensure consistency of benefits across the Company, the impact of which is reflected in the December 31, 2010 figures above.

The weighted-average assumptions used to determine the benefit obligations as of the end of each year were as follows:

	December 31, 2011 2010	
Discount rate	5.05	% 5.81
Rate of compensation increase	N/A	3.50
Measurement date	December 31, 2011	December 31, 2010

The weighted-average assumptions used to determine net periodic benefit cost during each year were as follows:

	Year Ended December 31, 2011 2010		2009	
Discount rate	5.81	% 6.14	% 6.85	%
Rate of compensation increase	3.50	% 3.50	% 3.50	%
Measurement date	December 31, 2010	December 31, 2009	December 31, 2008	

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

The following presents information about the assumed health care cost trend rate:

	Year Ended December 31,			
	2011		2010	
Health care cost trend rate assumed for next year	9.00	%	9.00	%
Rate to which the cost trend is assumed to decline (the ultimate trend rate)	5.00	%	5.00	%
Year that the rate reaches the ultimate trend rate	2018		2017	

Assumed health care cost trend rates have a significant effect on the amounts reported for health care plans. A one-percentage-point change in the assumed health care cost trend would have the following effects:

	One Percentage- Point Increase (Dollars in millions)	One Percentage- Point Decrease
Effect on total service and interest cost components	\$8.2	\$(6.9)
Effect on total postretirement benefit obligation	\$121.8	\$(104.6)

Plan Assets

The Company's postretirement benefit plans are unfunded.

Estimated Future Benefit Payments

The following benefit payments (net of retiree contributions), which reflect expected future service, as appropriate, are expected to be paid by the Company:

	Postretirement Benefits (Dollars in millions)
2012	\$68.4
2013	72.9
2014	75.6
2015	77.8
2016	79.9
Years 2017-2021	410.3

(15) Pension and Savings Plans

One of the Company's subsidiaries, Peabody Investments Corp. (PIC), sponsors a defined benefit pension plan covering certain U.S. salaried employees and eligible hourly employees at certain PIC subsidiaries (the Peabody Plan). A PIC subsidiary also has a defined benefit pension plan covering eligible employees who are represented by the United Mine Workers of America (UMWA) under the Western Surface Agreement (the Western Plan). PIC also sponsors an unfunded supplemental retirement plan to provide senior management with benefits in excess of limits under the federal tax law (collectively, the Plans).

Effective May 31, 2008, the Peabody Plan was frozen in its entirety for both participation and benefit accrual purposes. The Company adopted an enhanced savings plan contribution structure in lieu of benefits formerly accrued under the Peabody Plan.

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Net periodic pension cost included the following components:

	Year Ended December 31,		
	2011	2010	2009
	(Dollars in millions)		
Service cost for benefits earned	\$1.7	\$1.5	\$1.4
Interest cost on projected benefit obligation	49.8	50.5	51.3
Expected return on plan assets	(64.4) (58.3) (60.9
Amortization of prior service cost	1.0	1.4	1.4
Amortization of actuarial losses	30.1	21.9	1.9
Total net periodic pension (benefit) cost	\$18.2	\$17.0	\$(4.9)

The following includes amounts recognized in accumulated other comprehensive loss:

	Year Ended December 31,		
	2011	2010	2009
	(Dollars in millions)		
Net actuarial loss arising during year	\$144.2	\$13.1	\$46.1
Amortization:			
Actuarial loss	(30.1) (21.9) (1.9
Prior service cost	(1.0) (1.4) (1.4
Total recognized in other comprehensive loss	113.1	(10.2) 42.8
Net periodic pension (benefit) cost	18.2	17.0	(4.9)
Total recognized in net periodic pension cost and other comprehensive loss	\$131.3	\$6.8	\$37.9

The Company amortizes actuarial gain and loss using a 5% corridor with a five-year amortization period. The estimated net actuarial loss and prior service cost that will be amortized from accumulated other comprehensive loss into net periodic pension cost during the year ended December 31, 2012 are \$48.6 million and \$1.0 million, respectively.

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

The following summarizes the change in benefit obligation, change in plan assets and funded status of the Company's plans:

	December 31, 2011 2010 (Dollars in millions)	
Change in benefit obligation:		
Projected benefit obligation at beginning of period	\$881.0	\$844.9
Service cost	1.7	1.5
Interest cost	49.8	50.5
Benefits paid	(52.8)	(50.4)
Actuarial loss	83.9	34.5
Projected benefit obligation at end of period	963.6	881.0
Change in plan assets:		
Fair value of plan assets at beginning of period	771.6	629.6
Actual return on plan assets	4.1	79.8
Employer contributions	46.7	112.6
Benefits paid	(52.8)	(50.4)
Fair value of plan assets at end of period	769.6	771.6
Funded status at end of year	\$(194.0)	\$(109.4)
Amounts recognized in the consolidated balance sheets:		
Current obligation (included in Accounts payable and accrued expenses)	\$(1.7)	\$(1.8)
Noncurrent obligation (included in Other noncurrent liabilities)	(192.3)	(107.6)
Net amount recognized	\$(194.0)	\$(109.4)

The weighted-average assumptions used to determine the benefit obligations as of the end of each year were as follows:

	December 31, 2011 2010	
Discount rate	5.00	% 5.84
Measurement date	December 31, 2011	December 31, 2010

The weighted-average assumptions used to determine net periodic benefit cost during each year were as follows:

	Year Ended December 31,		
	2011	2010	2009
Discount rate	5.84	% 6.19	% 6.90
Expected long-term return on plan assets	8.25	% 8.25	% 8.75
Measurement date	December 31, 2010	December 31, 2009	December 31, 2008

The expected rate of return on plan assets is determined by taking into consideration expected long-term returns associated with each major asset class (net of inflation) based on long-term historical ranges, inflation assumptions and the expected net value from active management of the assets based on actual results. Effective January 1, 2012, the Company lowered its expected rate of return on plan assets from 8.25% to 8.0% given the decline in asset performance due to the continued global recession and disruption in the financial markets.

The projected benefit obligation and the accumulated benefit obligation exceeded plan assets for all plans as of December 31, 2011 and 2010. The accumulated benefit obligation for all pension plans was \$963.6 million and \$881.0 million as of December 31, 2011 and 2010, respectively.

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Assets of the Plans

Assets of the Peabody Plan and the Western Plan are commingled in the PIC Master Trust (the Master Trust) and are invested in accordance with investment guidelines that have been established by each Plan's respective Retirement Committee (collectively, the Retirement Committees) after consultation with outside investment advisors and actuaries.

The asset allocation targets have been set with the expectation that the Plans' assets will be managed with an appropriate level of risk so that they can fund each Plan's expected liabilities. To determine the appropriate target asset allocations, the Retirement Committees consider the demographics of each Plan's participants, the funding status of each Plan, the business and financial profile of the Company and other associated risk preferences. These allocation targets are reviewed by the Retirement Committees on a regular basis and revised as necessary. The current target allocations for plan assets are 60% equity securities and 40% fixed income investments. Plan assets currently include real estate investments representing approximately 3% of total plan assets. The Company is in the process of liquidating these real estate holdings.

Assets of the Plans are either under active management by third-party investment advisors or in index funds, all selected and monitored by the Retirement Committees. The Retirement Committees have established specific investment guidelines for each major asset class including performance benchmarks, allowable and prohibited investment types and concentration limits. In general, the Plans' investment guidelines do not permit leveraging the assets held in the Master Trust. The investment managers in the Master Trust, however, may employ various strategies and derivative instruments in establishing overall portfolio characteristics consistent with the guidelines and investment objectives for their portfolios. Equity investment guidelines do not permit entering into put or call options (except as deemed appropriate to manage currency risk), and futures contracts are permitted only to the extent necessary to equitize cash holdings.

A financial instrument's level within the valuation hierarchy is based upon the lowest level of input that is significant to the fair value measurement. Following is a description of the valuation methodologies used for investments measured at fair value, including the general classification of such investments pursuant to the valuation hierarchy. U.S. equity securities. As of December 31, 2011, investment vehicles include an institutional mutual fund that holds various small-cap publicly traded common stocks and an institutional mutual fund that invests in large-cap stocks. These institutional mutual funds are classified within the Level 2 valuation hierarchy since fair value inputs are derived prices in active markets and the institutional mutual funds are not publicly traded on a national securities exchange. Prior to December 31, 2011, investment vehicles included various small-cap publicly traded common stocks, an exchange-traded fund and a common/collective trust. Publicly traded common stocks and the exchange-traded fund were traded on a national securities exchange and were valued at quoted market prices in active markets and were classified within Level 1 of the valuation hierarchy. While the common/collective trust invested in various large-cap publicly traded common stocks that were traded on a national securities exchange, it was classified within Level 2 of the valuation hierarchy since the net asset value (NAV) was based on a derived price in an active market and it was not publicly traded on a national securities exchange. U.S. equity securities are not subject to liquidity redemption restrictions.

International equity securities. Investment vehicles include a common/collective trust and an institutional mutual fund that primarily invest in various large-cap international equity securities that are valued on the basis of quotations from the primary market in which they are traded and translated at each valuation date from the local currency into U.S. dollars using the mean between the bid and asked market rates for such currencies. The NAV of the fund and the calculation of the NAV of each underlying investment are determined in U.S. dollars by the custodial trustee or at the direction of the investment manager as of the end of each month. These investments are classified within the Level 2 valuation hierarchy since the NAV is based on a derived price in an active market and neither the common/collective trust nor the mutual fund are publicly traded on a national securities exchange. Redemptions can only occur as of the

last business day of the month subject to each funds respective notification period.

Debt securities. Investment vehicles include various institutional mutual funds that hold mortgage-backed debt securities, international debt securities and corporate debt securities. Institutional mutual funds are invested in various diversified portfolios of fixed-income instruments, and the NAV for each institutional mutual fund is calculated daily in actively traded markets by an independent custodian for the investment manager. The institutional mutual funds are classified within the Level 2 valuation hierarchy since fair value inputs are derived prices in active markets and the institutional mutual funds are not publicly traded on a national securities exchange. Debt securities are not subject to liquidity redemption restrictions.

F - 43

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Short-term investments. Investment vehicles primarily include institutional mutual funds. Short-term investments include a diversified portfolio of liquid, short-term instruments of varying maturities. The institutional mutual funds are classified within the Level 2 valuation hierarchy since fair value inputs are derived prices in active markets and the institutional mutual funds are not publicly traded on a national securities exchange. Short-term investments are not subject to liquidity redemption restrictions.

Interests in real estate. Investments in real estate represent interests in several limited partnerships, which invest in various real estate properties. They are valued using various methodologies including independent third party appraisals. For some investments, little market activity may exist and determination of fair value is then based on the best information available in the circumstances. This involves a significant degree of judgment by taking into consideration a combination of internal and external factors. Based on the above factors, interests in real estate are classified within the Level 3 valuation hierarchy. Certain interests in real estate are subject to liquidity redemption restrictions.

The methods described above may produce a fair value calculation that may not be indicative of net realizable value or reflective of future fair values. Furthermore, while the Company believes its valuation methods are appropriate and consistent with other market participants, the use of different methodologies or assumptions to determine the fair value of certain financial instruments could result in a different fair value measurement at the reporting date. The inputs or methodologies used for valuing investments are not necessarily an indication of the risk associated with investing in those investments.

The following tables present the fair value of assets in the Master Trust by asset category and by fair value hierarchy:

	December 31, 2011			
	Level 1	Level 2	Level 3	Total
	(Dollars in millions)			
U.S. equity securities	\$—	\$340.4	\$—	\$340.4
International equity securities	—	107.8	—	107.8
Mortgage-backed debt securities	—	98.9	—	98.9
U.S. debt securities	—	83.3	—	83.3
International debt securities	—	32.0	—	32.0
Corporate debt securities	—	45.8	—	45.8
Short-term investments	—	36.1	—	36.1
Interests in real estate	—	—	25.3	25.3
Total assets at fair value	\$—	\$744.3	\$25.3	\$769.6

	December 31, 2010

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

The table below sets forth a summary of changes in the fair value of the Master Trust's Level 3 investments:

	Year Ended December 31,	
	2011	2010
	(Dollars in millions)	
Beginning of year	\$47.7	\$47.4
Assets held at the reporting date:		
Realized losses	(8.9) (0.1
Unrealized gains, net	11.4	1.3
Purchases, sales and settlements, net	(24.9) (0.9
End of year	\$25.3	\$47.7
Contributions		

Annual contributions to the qualified plans are made in accordance with minimum funding standards and the Company's agreement with the Pension Benefit Guaranty Corporation (PBGC). Funding decisions also consider certain funded status thresholds defined by the Pension Protection Act of 2006 (generally 80%). As of December 31, 2011, the Company's qualified plans are expected to be at or above the Pension Protection Act thresholds and will therefore avoid benefit restrictions and at-risk penalties for 2012. The Company intends to contribute the necessary amount needed to maintain these funded status thresholds during 2012.

Estimated Future Benefit Payments

The following benefit payments, which reflect expected future service, as appropriate, are expected to be paid by the Master Trust:

	Pension Benefits
	(Dollars in millions)
2012	\$56.7
2013	58.0
2014	59.8
2015	61.8
2016	63.6
Years 2017-2021	333.3

Defined Contribution Plans

The Company sponsors employee retirement accounts under three 401(k) plans for eligible U.S. employees. The Company matches voluntary contributions to each plan up to specified levels. The expense for these plans was \$54.5 million, \$51.3 million and \$47.9 million for the years ended December 31, 2011, 2010 and 2009, respectively. A performance contribution feature in one of the plans allows for additional contributions from the Company based upon meeting specified Company performance targets. Performance contributions related to the years ended December 31, 2011, 2010 and 2009 were \$22.5 million, \$20.6 million and \$20.3 million, respectively.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

(16) Stockholders' Equity

Common Stock

The Company has 800.0 million authorized shares of \$0.01 par value common stock. Holders of common stock are entitled to one vote per share on all matters to be voted upon by the stockholders and vote together, as one class, with the holders of the Company's Series A Junior Participating Preferred Stock, if any such shares were issued and outstanding. The holders of common stock do not have cumulative voting rights in the election of directors. Holders of common stock are entitled to ratably receive dividends if, as and when dividends are declared from time to time by the Company's Board of Directors out of funds legally available for that purpose, after payment of dividends required to be paid on outstanding preferred stock or series common stock, as described below. Upon liquidation, dissolution or winding up, any business combination or a sale or disposition of all or substantially all of the assets, the holders of common stock are entitled to ratably receive the assets available for distribution to the stockholders after payment of liabilities and accrued but unpaid dividends and liquidation preferences on any outstanding preferred stock or series common stock. The common stock has no preemptive or conversion rights and is not subject to further calls or assessment by the Company. There are no redemption or sinking fund provisions applicable to the common stock.

The following table summarizes common stock activity from January 1, 2009 to December 31, 2011:

	2011	2010	2009
Shares outstanding at the beginning of the year	270.2	268.2	266.6
Stock options exercised	0.3	1.5	0.5
Stock grants to employees	0.7	0.6	0.8
Employee stock purchases	0.2	0.2	0.4
Shares relinquished	(0.3)) (0.3) (0.1
Shares outstanding at the end of the year	271.1	270.2	268.2

Preferred Stock and Series Common Stock

The Board of Directors is authorized to issue up to 10.0 million shares of preferred stock and up to 40.0 million shares of series common stock, both with a \$0.01 per share par value. The Board of Directors can determine the terms and rights of each series, whether dividends (if any) will be cumulative or non-cumulative and the dividend rate of the series, redemption or sinking fund provisions, conversion terms, prices and rates, and amounts payable on shares of the series in the event of any voluntary or involuntary liquidation, dissolution or winding up of the affairs of the Company. The Board of Directors may also determine restrictions on the issuance of shares of the same series or of any other class or series, and the voting rights (if any) of the holders of the series. There were no outstanding shares of preferred stock or series common stock as of December 31, 2011.

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Perpetual Preferred Stock

As discussed in Note 11, the Company had \$732.5 million aggregate principal amount of Debentures outstanding as of December 31, 2011. Perpetual preferred stock issued upon a conversion of the Debentures will be fully paid and non-assessable, and holders will have no preemptive or preferential right to purchase any of the Company's other securities. The perpetual preferred stock has a liquidation preference of \$1,000 per share, is not convertible and is redeemable at the Company's option at any time at a cash redemption price per share equal to the liquidation preference plus any accumulated dividends. Holders are entitled to receive cumulative dividends at an annual rate of 3.0875% if and when declared by the Company's Board of Directors. If the Company fails to pay dividends on the perpetual preferred stock for five years, or upon the occurrence of a mandatory trigger event, as defined in the certificate of designations governing the perpetual preferred stock, the Company generally must sell warrants or preferred stock with specified characteristics and use the funds from that sale to pay accumulated dividends after the payment in full of any deferred interest on the Debentures, subject to certain limitations. In the event of a mandatory trigger event, the Company may not declare dividends on the perpetual preferred stock other than those funded through the sale of warrants or preferred stock as described above. Any deferred interest on the Debentures at the time of notice of conversion will be reflected as accumulated dividends on the perpetual preferred stock at issuance. Additionally, holders of the perpetual preferred stock are entitled to elect two additional members to serve on the Company's Board of Directors if (i) prior to any remarketing of the perpetual preferred stock, the Company fails to declare and pay dividends with respect to the perpetual stock for 10 consecutive years or (ii) after any successful remarketing or any final failed remarketing of the perpetual preferred stock, the Company fails to declare and pay six dividends thereon, whether or not consecutive. The perpetual preferred stock may be remarketed at the holder's election after December 15, 2046 or earlier, upon the first occurrence of a change of control if the Company does not redeem the perpetual preferred stock. There were no outstanding shares of perpetual preferred stock as of December 31, 2011.

Preferred Share Purchase Rights Plan and Series A Junior Participating Preferred Stock

Each outstanding share of common stock, par value \$0.01 per share, of the Company carries one preferred share purchase right (a Right). The Rights are governed by a plan that expires in August 2012.

The Rights have certain anti-takeover effects. The Rights will cause substantial dilution to a person or group that attempts to acquire the Company on terms not approved by the Company's Board of Directors, except pursuant to any offer conditioned on a substantial number of Rights being acquired. The Rights should not interfere with any merger or other business combination approved by the Board of Directors since the Rights may be redeemed by the Company at a redemption price of \$0.001 per Right prior to the time that a person or group has acquired beneficial ownership of 15% or more of the common stock of the Company. In addition, the Board of Directors is authorized to reduce the 15% threshold to not less than 10%.

Each Right entitles the holder to purchase one quarter of one-hundredth of a share of Series A Junior Participating Preferred Stock from the Company at an exercise price of \$27.50, which in turn provides rights to receive the number of common stock shares having a market value of two times the exercise price of the Right. The Right is exercisable only if a person or group acquires 15% or more of the Company's common stock. The Board of Directors is authorized to issue up to 1.5 million shares of Series A Junior Participating Preferred Stock. There were no outstanding shares of Series A Junior Participating Preferred Stock as of December 31, 2011.

Treasury Stock

Share repurchase program. The Company has a share repurchase program for its common stock with an authorized amount of \$1.0 billion in which repurchases may be made from time to time based on an evaluation of the Company's outlook and general business conditions, as well as alternative investment and debt repayment options. The Company's Chairman and Chief Executive Officer also has authority to direct the Company to repurchase up to \$100.0 million of common stock outside the share repurchase program. The share repurchase program does not have an expiration date

and may be discontinued at any time. Through December 31, 2011, the Company made repurchases of 7.7 million shares at a cost of \$299.6 million (\$199.8 million in 2008 and \$99.8 million in 2006), leaving \$700.4 million available under the share repurchase program.

Shares relinquished. The Company allows employees to relinquish common stock to pay estimated taxes upon the payout of performance units that are settled in common stock and the vesting of restricted stock. The amount of common stock shares relinquished were 311,709 for the year ended December 31, 2011 and 268,308 for the year ended December 31, 2010. The value of the common stock tendered by employees was based upon the closing price on the dates of the respective transactions.

(17) Share-Based Compensation

The Company has an equity incentive plan for employees and non-employee directors that allows for the issuance of share-based compensation in the form of stock appreciation rights, restricted stock, performance awards, incentive stock options, nonqualified stock options and deferred stock units. The plan made 14.0 million shares of the Company's common stock available for grant, with 13.8 million shares available for grant as of December 31, 2011. The Company has two employee stock purchase plans that provide for the purchase of up to 6.0 million shares of the Company's common stock, with 5.0 million shares authorized for purchase by U.S. employees and 1.0 million shares authorized for purchase by Australian employees.

Share-Based Compensation Expense and Cash Flows

The Company's share-based compensation expense is recorded in "Selling and administrative expenses" in the consolidated statements of income. The cash received by the Company upon the exercise of stock options and when employees purchase stock under the employee stock purchase plans is reflected as a financing activity in the consolidated statements of cash flows. Share-based compensation expense and cash flow amounts were as follows:

	Year Ended December 31,		
	2011	2010	2009
	(Dollars in millions)		
Share-based compensation expense	\$43.9	\$41.1	\$38.8
Tax benefit	16.3	15.4	15.0
Share-based compensation expense, net of tax benefit	27.6	25.7	23.8
Cash received upon the exercise of stock options and from employee stock purchases	11.1	22.2	8.7
Excess tax benefits related to share-based compensation	8.1	51.0	—

As of December 31, 2011, the total unrecognized compensation cost related to nonvested awards was \$30.3 million, net of taxes, which is expected to be recognized over 3.0 years with a weighted-average period of 0.8 years.

Deferred Stock Units

In 2011, 2010 and 2009, the Company granted deferred stock units to each of its non-employee directors. The fair value of these units is equal to the market price of the Company's common stock at the date of grant. These deferred stock units generally vest after one year and are settled in common stock on the specified distribution date elected by each non-employee director. Beginning in 2011, non-employee directors were also given the option to receive their total annual cash retainer in the form of additional deferred stock units (based on the fair market value of the Company's common stock on the date of grant). The additional grant of deferred stock units is subject to the same grant timing, vesting and distribution date elections as the annual equity compensation grant.

Restricted Stock Awards

The primary share-based compensation tool used by the Company for its employee base is through awards of restricted stock. The majority of restricted stock awards are granted in January of each year with a lesser portion granted in the first month of the subsequent three quarters. Awards generally cliff vest after three years of service and only contain a service condition, with compensation cost recognized on a straight-line basis over the requisite service period, net of estimated forfeitures. For awards with service and performance conditions, the Company recognizes compensation cost using the graded-vesting method, net of estimated forfeitures. The fair value of restricted stock is equal to the market price of the Company's common stock at the date of grant.

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

A summary of restricted stock award activity is as follows:

	Year Ended December 31, 2011	Weighted Average Grant-Date Fair Value
Nonvested at December 31, 2010	1,894,299	\$39.32
Granted	618,124	59.63
Vested	(849,464)	42.38
Forfeited	(131,867)	47.10
Nonvested at December 31, 2011	1,531,092	\$45.16

The total fair value of restricted stock awards granted during the years ended December 31, 2011, 2010 and 2009, was \$36.9 million, \$23.3 million and \$23.1 million, respectively. The total fair value of restricted stock awards vested during the years ended December 31, 2011, 2010 and 2009, was \$50.0 million, \$20.5 million and \$11.2 million, respectively.

Stock Options

Over the past few years, the Company's stock option awards have been primarily limited to senior management personnel. All stock options are granted at an exercise price equal to the market price of the Company's common stock at the date of grant. Stock options generally vest in one-third increments over a period of three years or cliff vest after three years, and expire after 10 years from the date of grant. Expense is recognized ratably over the vesting period, net of estimated forfeitures. Option grants are typically made in January of each year or upon hire for eligible plan participants.

The Company used the Black-Scholes option pricing model to determine the fair value of stock options. The Company utilized U.S. Treasury yields as of the grant date for its risk-free interest rate assumption, matching the U.S. Treasury yield terms to the expected life of the option. The Company utilized historical company data to develop its dividend yield, expected volatility and expected option life assumptions.

A summary of outstanding option activity under the plans is as follows:

	Year Ended December 31, 2011	Weighted Average Exercise Price	Weighted Average Remaining Contractual Life	Aggregate Intrinsic Value (in millions)
Options Outstanding at December 31, 2010	1,916,301	\$32.25	5.9	\$61.2
Granted	223,307	64.52		
Exercised	(254,828)	18.57		
Forfeited	—	—		
Options Outstanding at December 31, 2011	1,884,780	\$37.92	5.6	\$11.0
Vested and Exercisable	1,301,607	\$32.53	4.5	\$10.0

During the years ended December 31, 2011, 2010 and 2009, the total intrinsic value of options exercised, defined as the excess fair value of the underlying stock over the exercise price of the options, was \$10.3 million, \$53.7 million and \$14.7 million, respectively. The weighted-average fair values of the Company's stock options and the assumptions used in applying the Black-Scholes option pricing model were as follows:

	Year Ended December 31,		
	2011	2010	2009
Weighted-average fair value	\$33.92	\$25.70	\$26.84
Risk-free interest rate	2.0	% 2.8	% 1.5 %

Edgar Filing: PEABODY ENERGY CORP - Form 10-K

Expected option life	5.0 years		5.0 years		5.0 years	
Expected volatility	64	%	64	%	60	%
Dividend yield	0.6	%	0.6	%	0.9	%

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Performance Units

Performance units are typically granted annually in January and vest over a three-year measurement period and are primarily limited to senior management personnel. The performance units are usually subject to the achievement of two goals, 50% based on three-year stock price performance compared to both an industry peer group and a S&P index (market condition) and 50% based on a three-year return on capital target (performance condition). The performance units granted in 2011 are subject to the achievement of the performance and market conditions, while the 2010 and 2009 units granted are only subject to the achievement of the market condition. Three performance unit grants are outstanding for any given year. The payouts related to all active grants will be settled in the Company's common stock.

A summary of performance unit activity is as follows:

	Year Ended December 31, 2011	Weighted Average Remaining Contractual Life
Nonvested at December 31, 2010	386,662	1.5
Granted	122,590	
Forfeited	—	
Vested	(248,263)	
Nonvested at December 31, 2011	260,989	1.5

As of December 31, 2011, there were 248,263 performance units vested that had an aggregate intrinsic value of \$12.4 million and a conversion price per share of \$34.37.

The performance condition awards were valued utilizing the grant date fair values of the Company's stock adjusted for dividends foregone during the vesting period. The market condition awards were valued utilizing a Monte Carlo simulation which incorporates the total stockholder return hurdles set for each grant. The assumptions used in the valuations for grants were as follows:

	Year Ended December 31,					
	2011		2010		2009	
Risk-free interest rate	1.0	%	1.7	%	1.3	%
Expected volatility	64	%	64	%	60	%
Dividend yield	0.6	%	0.6	%	0.9	%

Employee Stock Purchase Plans

The Company's eligible full-time and part-time employees are able to contribute up to 15% of their base compensation into the employee stock purchase plans, subject to a limit of \$25,000 per person per year. Employees are able to purchase Company common stock at a 15% discount to the lower of the fair market value of the Company's common stock on the initial or final trading dates of each six-month offering period. Offering periods begin on January 1 and July 1 of each year. The Company uses the Black-Scholes option pricing model to determine the fair value of employee stock purchase plan share-based payments. The fair value of the six-month "look-back" option in the Company's employee stock purchase plans is estimated by adding the fair value of 0.15 of one share of stock to the fair value of 0.85 of an option on one share of stock. The Company utilized U.S. Treasury yields as of the grant date for its risk-free interest rate assumption, matching the Treasury yield terms to the six-month offering period. The Company utilized historical company data to develop its dividend yield and expected volatility assumptions.

Shares purchased under the plans were 0.2 million for the year ended December 31, 2011, 0.2 million for the year ended December 31, 2010 and 0.4 million for the year ended December 31, 2009.

(18) Accumulated Other Comprehensive
Income (Loss)

The following table sets forth the after-tax components of comprehensive income (loss):

	Foreign Currency Translation Adjustment	Net Actuarial Loss Associated with Postretirement Plans and Workers' Compensation Obligations	Prior Service Cost Associated with Postretirement Plans	Cash Flow Hedges	Available-For-Sale Securities	Total Accumulated Other Comprehensive Loss
	(Dollars in millions)					
December 31, 2008	\$3.1	\$ (220.4)	\$ (18.7)	\$ (152.5)	\$ —	\$ (388.5)
Net change in fair value	—	—	—	235.2	—	235.2
Reclassification from other comprehensive income to earnings	—	11.8	1.8	84.6	—	98.2
Current period change	—	(134.9)	6.5	—	—	(128.4)
December 31, 2009	3.1	(343.5)	(10.4)	167.3	—	(183.5)
Net change in fair value	—	—	—	229.9	—	229.9
Reclassification from other comprehensive income to earnings	—	31.8	2.5	(102.4)	—	(68.1)
Current period change	—	(41.3)	(4.9)	—	—	(46.2)
December 31, 2010	3.1	(353.0)	(12.8)	294.8	—	(67.9)
Net change in fair value	—	—	—	291.9	(5.8)	286.1
Reclassification from other comprehensive income to earnings	—	38.2	2.3	(251.0)	(0.9)	(211.4)
Current period change	—	(150.1)	0.9	—	—	(149.2)
December 31, 2011	\$3.1	\$ (464.9)	\$ (9.6)	\$ 335.7	\$ (6.7)	\$ (142.4)

Comprehensive income (loss) differs from net income by the amount of unrealized gain or loss resulting from valuation changes of the Company's cash flow hedges (see Note 6 and Note 7 for information related to the Company's cash flow hedges), changes in the fair value of available-for-sale securities (see Note 5 for information related to the Company's investments in available-for-sale securities) and the change in actuarial loss and prior service cost during the periods. The values of the Company's cash flow hedging instruments are primarily affected by changes in diesel fuel and coal prices, and the U.S. dollar/Australian dollar exchange rate.

(19) Resource Management and Other Commercial Events

In 2011, the Company exchanged coal reserves in Kentucky and coal reserves and surface lands in Illinois for coal reserves in West Virginia. Based on the fair value of the coal reserves received, the Company recognized a \$37.7 million gain on the exchange. Fair value was determined by using a discounted cash flow model that included assumptions for future coal sales prices, operating costs and the discount rate. This non-cash transaction was excluded from the investing section of the condensed consolidated statement of cash flows. In 2010, the Company recognized gains of \$23.7 million on similar transactions.

In 2011, the Company recognized income associated with the receipt of a \$14.6 million project development fee related to its involvement in the Prairie State Energy Campus (Prairie State), a 1,600 megawatt coal-fueled electricity generation project.

In 2011, the Company sold non-strategic coal reserves and surface lands located in Kentucky and Illinois for \$24.9 million of cash proceeds and notes receivable totaling \$17.4 million and recognized a gain of \$31.7 million. The non-cash portion of these transactions were excluded from the investing section of the consolidated statement of cash flows.

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

(20) Earnings per Share (EPS)

Basic and diluted EPS are computed using the two-class method, which is an earnings allocation that determines EPS for each class of common stock and participating securities according to dividends declared and participation rights in undistributed earnings. The Company's restricted stock awards are considered participating securities because holders are entitled to receive non-forfeitable dividends during the vesting term. Diluted EPS includes securities that could potentially dilute basic EPS during a reporting period, for which the Company includes the Debentures and share-based compensation awards.

A conversion of the Debentures may result in payment for any conversion value in excess of the principal amount of the Debentures in the Company's common stock. For diluted EPS purposes, potential common stock is calculated based on whether the market price of the Company's common stock at the end of each reporting period is in excess of the conversion price of the Debentures. For a full discussion of the conditions under which the Debentures may be converted, the conversion rate to common stock and the conversion price, see Note 11.

For all but the performance units, the potentially dilutive impact of the Company's share-based compensation awards is determined using the treasury stock method. Under the treasury stock method, awards are treated as if they had been exercised with any proceeds used to repurchase common stock at the average market price during the period. Any incremental difference between the assumed number of shares issued and purchased is included in the diluted share computation. For the Company's other share-based compensation awards, performance units, their contingent features result in an assessment for any potentially dilutive common stock by using the end of the reporting period as if it were the end of the contingency period for all units granted. For a full discussion of the Company's share-based compensation awards, see Note 17.

The computation of diluted EPS excludes anti-dilutive shares of approximately 0.2 million for the years ended December 31, 2011, 2010 and 2009. These anti-dilutive shares were due to certain share-based compensation awards calculated under the treasury stock method. This anti-dilution generally occurs where the exercise prices are higher than the average market value of the Company's stock price during the applicable period.

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

The following illustrates the earnings allocation method utilized in the calculation of basic and diluted EPS.

	Year Ended December 31,		
	2011	2010	2009
	(In millions, except per share amounts)		
EPS numerator:			
Income from continuing operations, net of income taxes	\$1,010.5	\$826.6	\$443.2
Less: Net (loss) income attributable to noncontrolling interests	(11.4) 28.2	14.8
Income from continuing operations attributable to common stockholders before allocation of earnings to participating securities	1,021.9	798.4	428.4
Less: Earnings allocated to participating securities	(5.3) (5.6) (2.9
Income from continuing operations attributable to common stockholders, after earnings allocated to participating securities ⁽¹⁾	1,016.6	792.8	425.5
(Loss) income from discontinued operations, net of income taxes	(64.2) (24.4) 19.8
Net income attributable to common stockholders, after earnings allocated to participating securities ⁽¹⁾	\$952.4	\$768.4	\$445.3
EPS denominator:			
Weighted average shares outstanding — basic	269.1	267.0	265.5
Impact of dilutive securities	1.2	2.9	2.0
Weighted average shares outstanding — diluted	270.3	269.9	267.5
Basic EPS attributable to common stockholders:			
Income from continuing operations	\$3.77	\$2.97	\$1.60
(Loss) income from discontinued operations	(0.24) (0.09) 0.08
Net income attributable to common stockholders	\$3.53	\$2.88	\$1.68
Diluted EPS attributable to common stockholders:			
Income from continuing operations	\$3.76	\$2.93	\$1.59
(Loss) income from discontinued operations	(0.24) (0.09) 0.07
Net income attributable to common stockholders	\$3.52	\$2.84	\$1.66

(1) The reallocation adjustment for participating securities to arrive at the numerator used to calculate diluted EPS was less than \$0.1 million for the periods presented.

(21) Management — Labor Relations

As of December 31, 2011, the Company had approximately 8,300 employees, which included approximately 5,600 hourly employees. As of December 31, 2011, approximately 24% of the Company's hourly employees were represented by organized labor unions and generated 7% of its 2011 coal production. In the U.S., two of the Company's mines were represented by organized labor unions. In Australia, the coal mining industry is unionized and the majority of workers employed at the Company's Australian Mining operations are members of trade unions. The Construction Forestry Mining and Energy Union represents the Company's Australian subsidiaries' hourly production and engineering employees, including those employed through contract mining relationships. The Company could experience labor disputes, work stoppages or other disruptions in production that could negatively impact the Company's profitability. The following table below presents the Company's operations in which the employees are represented by organized labor unions.

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Mine	Current Agreement Expiration Date
U. S.	
Willow Lake ⁽¹⁾	-
Kayenta ⁽²⁾	September 2013
Australia	
Owner-operated mines:	
North Goonyella ⁽³⁾	March 2012
North Wambo Underground ⁽³⁾	April 2012
Wilkie Creek ⁽⁴⁾	March 2013
Metropolitan	June 2013
Coppabella	July 2013
Wambo Coal Handling Plant	October 2014
Contractor-operated mines:

Wilpinjong	August 2012
Millennium	September 2012
Moorvale	October 2012
Eaglefield	June 2014
Wambo Open-Cut	August 2014

The labor agreement for the hourly workers at the Company's Willow Lake Mine in Illinois expired in April 2011.

(1) The mine continues to operate without a contract. This agreement covers approximately 9% of the Company's U.S. subsidiaries' hourly employees, who generated approximately 1% of the Company's U.S. production during the year ended December 31, 2011.

Hourly workers at the Company's Kayenta Mine in Arizona are represented by the UMWA under the Western

(2) Surface Agreement, which is effective through September 2, 2013. This agreement covers approximately 7% of the Company's U.S. subsidiaries' hourly employees, who generated 4% of the Company's U.S. production during the year ended December 31, 2011.

(3) Negotiations for the North Goonyella, North Wambo Underground and Burton mines are underway.

(4) The Wilkie Creek Mine was held for sale as of December 31, 2011.

(22) Financial Instruments and Guarantees With Off-Balance-Sheet Risk

In the normal course of business, the Company is a party to guarantees and financial instruments with off-balance-sheet risk, which are not reflected in the accompanying consolidated balance sheets. Such financial instruments are valued based on the amount of exposure under the instrument and the likelihood of required performance. In the Company's past experience, virtually no claims have been made against these financial instruments. Management does not expect any material losses to result from these guarantees or off-balance-sheet instruments.

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Financial Instruments with Off-Balance Sheet Risk

As of December 31, 2011, the Company had the following financial instruments with off-balance sheet risk:

	Reclamation Obligations	Lease Obligations	Workers' Compensation Obligations	Other ⁽¹⁾	Total
	(Dollars in millions)				
Self bonding	\$929.6	\$—	\$—	\$—	\$929.6
Surety bonds	613.2	104.7	13.5	11.0	742.4
Bank guarantees	178.4	—	—	211.2	389.6
Letters of credit	—	—	62.6	20.0	82.6
Bilateral cash collateralization agreements	—	—	—	79.7	79.7
	\$1,721.2	\$104.7	\$76.1	\$321.9	\$2,223.9

Other includes bilateral cash collateralization agreement obligations described below and an additional \$242.2

⁽¹⁾ million in bank guarantees, letters of credit and surety bonds related to collateral for surety companies, road maintenance, performance guarantees and other operations.

The Company owns a 37.5% interest in Dominion Terminal Associates, a partnership that operates a coal export terminal in Newport News, Virginia under a 30-year lease that permits the partnership to purchase the terminal at the end of the lease term for a nominal amount. The partners have severally (but not jointly) agreed to make payments under various agreements which in the aggregate provide the partnership with sufficient funds to pay rents and to cover the principal and interest payments on the floating-rate industrial revenue bonds issued by the Peninsula Ports Authority, and which are supported by letters of credit from a commercial bank. As of December 31, 2011, the Company's maximum reimbursement obligation to the commercial bank was in turn supported by four letters of credit totaling \$42.7 million. The Company has a bilateral cash collateralization agreement for these letters of credit whereby the Company posted cash collateral in lieu of utilizing its Credit Facility. Such cash collateral is classified within "Cash and cash equivalents" given the Company has the ability to substitute letters of credit at any time for this cash collateral and it is, therefore, readily available to the Company.

The Company is party to an agreement with the PBGC and TXU Europe Limited, an affiliate of the Company's former parent corporation, under which the Company is required to make special contributions to two of the Company's defined benefit pension plans and to maintain a \$37.0 million letter of credit in favor of the PBGC. If the Company or the PBGC gives notice of an intent to terminate one or more of the covered pension plans in which liabilities are not fully funded, or if the Company fails to maintain the letter of credit, the PBGC may draw down on the letter of credit and use the proceeds to satisfy liabilities under the Employee Retirement Income Security Act of 1974, as amended. The PBGC, however, is required to first apply amounts received from a \$110.0 million guarantee in place from TXU Europe Limited in favor of the PBGC before it draws on the Company's letter of credit. The Company has a bilateral cash collateralization agreement for this letter of credit whereby the Company posted cash collateral in lieu of utilizing its Credit Facility. Such cash collateral is classified within "Cash and cash equivalents" given the Company has the ability to substitute letters of credit at any time for this cash collateral and it is therefore readily available to the Company. On November 19, 2002, TXU Europe Limited was placed under the administration process in the United Kingdom (a process similar to bankruptcy proceedings in the U.S.) and continues under this process as of December 31, 2011. As a result of these proceedings, TXU Europe Limited may be liquidated or otherwise reorganized in such a way as to relieve it of its obligations under its guarantee.

Accounts Receivable Securitization

The Company has an accounts receivable securitization program (securitization program) with a maximum capacity of \$275.0 million through its wholly-owned, bankruptcy-remote subsidiary (Seller). At December 31, 2011, the Company had \$41.7 million available under the securitization program, net of outstanding letters of credit and

amounts drawn. Under the securitization program, the Company contributes, on a revolving basis, trade receivables of most of the Company's U.S. subsidiaries to the Seller, which then sells the receivables in their entirety to a consortium of unaffiliated asset-backed commercial paper conduits (the Conduits). After the sale, the Company, as servicer of the assets, collects the receivables on behalf of the Conduits for a nominal servicing fee. The Company utilizes proceeds from the sale of its accounts receivable as an alternative to short-term borrowings under its Credit Facility, effectively managing its overall borrowing costs and providing an additional source for working capital. The current securitization program extends to May 2012, while the letter of credit commitment that supports the commercial paper facility underlying the securitization program must be renewed annually.

F - 55

Table of Contents

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

The Seller is a separate legal entity whose assets are available first and foremost to satisfy the claims of its creditors. Of the receivables sold to the Conduits, a portion of the amount due to the Seller is deferred until the ultimate collection of the underlying receivables. During the year ended December 31, 2011, the Company received total consideration of \$4,633.4 million related to accounts receivable sold under the securitization program, including \$3,462.7 million of cash up front from the sale of the receivables, an additional \$1,004.8 million of cash upon the collection of the underlying receivables, and \$165.9 million that had not been collected at December 31, 2011 and was recorded at fair value which approximates carrying value. The reduction in accounts receivable as a result of securitization activity with the Conduits was \$150.0 million at December 31, 2011 and \$150.0 million at December 31, 2010.

The securitization activity has been reflected in the consolidated statements of cash flows as operating activity because both the cash received from the Conduits upon sale of receivables as well as the cash received from the Conduits upon the ultimate collection of receivables are not subject to significantly different risks given the short-term nature of the Company's trade receivables. The Company recorded expense associated with securitization transactions of \$2.0 million, \$2.4 million and \$4.0 million for the years ended December 31, 2011, 2010 and 2009, respectively.

Other

The Company is the lessee under numerous equipment and property leases. It is common in such commercial lease transactions for the Company, as the lessee, to agree to indemnify the lessor for the value of the property or equipment leased, should the property be damaged or lost during the course of the Company's operations. The Company expects that losses with respect to leased property would be covered by insurance (subject to deductibles). The Company and certain of its subsidiaries have guaranteed other subsidiaries' performance under their various lease obligations. Aside from indemnification of the lessor for the value of the property leased, the Company's maximum potential obligations under its leases are equal to the respective future minimum lease payments, and the Company assumes that no amounts could be recovered from third parties.

In connection with the development of Prairie State, each owner, including one of the Company's subsidiaries, has issued a guarantee for its proportionate share (5.06% for the Company) of the construction costs under an agreement with Bechtel Power Corporation.

The Company has provided financial guarantees under certain long-term debt agreements entered into by its subsidiaries, and substantially all of the Company's subsidiaries provide financial guarantees under long-term debt agreements entered into by the Company. The maximum amounts payable under the Company's debt agreements are equal to the respective principal and interest payments.

(23) Commitments and Contingencies

Commitments

As of December 31, 2011, purchase commitments for capital expenditures were \$1,313.0 million, all of which is obligated within the next three years, with \$743.6 million obligated in the next year. The purchase commitments for capital expenditures represent an increase of \$854.8 million over amounts committed as of December 31, 2010 and primarily relate to new mines and expansion and extension projects in Australia and the U.S. Commitments made for expenditures under coal leases are reflected in Note 12. The Company also has various long- and short-term take or pay arrangements associated with rail and port commitments in Australia for the delivery of coal including amounts relating to export facilities. As of December 31, 2011, these commitments totaled \$4,547.6 million with \$1,644.0 million obligated within the next four years, of which \$443.1 million was obligated within the next year. During 2011, the Company recognized approximately \$284 million of expense, reflected in "Operating costs and expenses" in the consolidated statements of income, related to these take or pay arrangements.

A subsidiary of the Company owns a 5.06% undivided interest in Prairie State. The Company invested \$36.2 million, \$76.0 million and \$56.8 million during the years ended December 31, 2011, 2010 and 2009, respectively, representing its 5.06% share of the construction costs for those periods. Included in "Investments and other assets" in the

consolidated balance sheets as of December 31, 2011 and December 31, 2010, are costs of \$238.7 million and \$202.5 million, respectively. The Company's share of total construction costs for Prairie State is expected to be approximately \$250 million with the remaining funding expected in 2012.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Contingencies

From time to time, the Company or its subsidiaries are involved in legal proceedings arising in the ordinary course of business or related to indemnities or historical operations. The Company believes it has recorded adequate reserves for these liabilities and that there is no individual case pending that is likely to have a material adverse effect on the Company's financial condition, results of operations or cash flows. The Company discusses its significant legal proceedings below.

Litigation Relating to Continuing Operations

Navajo Nation Litigation. On June 18, 1999, the Navajo Nation served three of the Company's subsidiaries, including Peabody Western Coal Company (Peabody Western), with a complaint that had been filed in the U.S. District Court for the District of Columbia which alleged that the defendants jointly participated in unlawful activity to obtain favorable coal lease amendments. The plaintiff sought actual and punitive damages and the termination and reformation of two coal leases. The court allowed the Hopi Tribe to intervene in this lawsuit, and the Hopi Tribe sought unspecified actual and punitive damages and reformation of its coal lease. One of the Company's subsidiaries named as a defendant is now a subsidiary of Patriot. However, the Company is responsible for this litigation under the Separation Agreement entered into with Patriot in connection with the spin-off.

In October 2010, the Company's subsidiaries and the other defendants settled the Hopi claims, and the court dismissed those claims. In August 2011, the Company's subsidiaries and other defendants settled the Navajo claims, and agreed to dismiss all of the pending litigation with prejudice. In connection with this settlement, the Company recorded a provision totaling \$24.5 million in 2011. The court has dismissed this lawsuit, and this matter has concluded.

Gulf Power Company Litigation. On June 22, 2006, Gulf Power Company (Gulf Power) filed a breach of contract lawsuit against a Company subsidiary in the U.S. District Court, Northern District of Florida, contesting the force majeure declaration by the Company's subsidiary under a coal supply agreement with Gulf Power and seeking damages for alleged past and future tonnage shortfalls of nearly five million tons under the agreement, which expired on December 31, 2007. On June 30, 2009, the court granted Gulf Power's motion for partial summary judgment on liability and denied the Company subsidiary's motion for summary judgment. On September 30, 2010, the court entered its order on damages, awarding Gulf Power zero dollars in damages and the Company subsidiary its costs to defend the lawsuit. On November 1, 2010, Gulf Power filed a motion to alter or amend the judgment, contesting the trial court's damages order, to which the Company subsidiary objected. The court entered an order on July 29, 2011 that affirmed its September 30, 2010 decision in all respects except for 2007 cover coal purchases and granted in part Gulf Power's motion to alter judgment with respect to 2007 cover coal purchases. On September 30, 2011, the court entered an order awarding Gulf Power damages in the amount of \$20.5 million for its 2007 cover coal purchases. On January 19, 2012, the court entered its order awarding Gulf Power prejudgment interest in the amount of \$6.9 million plus post-judgment interest. The Company's subsidiary has filed its notice of appeal. Based on the Company's evaluation of information currently available concerning the issues and their potential impact, the Company believes that its subsidiary will be successful in the liability appeals process and, therefore, no liability has been recorded at this time.

Monto Coal Pty Limited, Monto Coal 2 Pty Ltd Limited and Macarthur Coal Limited. In October 2007, a statement of claim was delivered to Monto Coal Pty Ltd, a wholly owned subsidiary of Macarthur, and Monto Coal 2 Pty Ltd, an equity accounted investee, from the minority interest holders in the Monto Coal joint venture, alleging that Monto Coal 2 Pty Ltd breached the Monto Coal Joint Venture Agreement and Monto Coal Pty Ltd breached the Monto Coal Management Agreement. Monto Coal Pty Ltd is the manager of the Monto Coal joint venture pursuant to the Management Agreement. Monto Coal 2 Pty Ltd holds a 51% interest in the Monto Coal Joint Venture. The plaintiffs are Sanrus Pty Ltd, Edge Developments Pty Ltd and H&J Enterprises (Qld) Pty Ltd. An additional statement of claim was delivered to Macarthur in November 2010 from the same minority interest holders in the Monto Coal Joint Venture, alleging that Macarthur induced Monto Coal 2 Pty Ltd and Monto Coal Pty Ltd to breach the Monto Coal

Joint Venture Agreement and the Monto Coal Management Agreement, respectively. These actions, which are pending before the Supreme Court of Queensland, Australia, seek damages from the three defendants collectively of no less than \$1,193.2 million Australian dollars plus interest and costs. The defendants dispute the claims and are vigorously defending their positions. Based on the Company's evaluation of the issues and their potential impact, the amount of any future loss cannot be reasonably estimated. However, based on current information, the Company believes these claims are likely to be finalized without a material adverse effect on its financial condition, results of operations or cash flows.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

MCG Coal Holdings Pty Ltd. In 2010, Macarthur loaned \$360.0 million (Australian dollars) to MCG Coal Holdings Pty Ltd (MCG). The loan from Macarthur was based on an entitlement for Macarthur to convert the loan into a 90% interest in MCG, the indirect holder of a mineral development licence (MDL 162) that was acquired with the proceeds of the loan. MCG and two associated companies (MCG Coal Pty Ltd and Fortrus Resources Pty Ltd) refused to take the steps necessary to enable Macarthur to convert the loan into equity. Macarthur and its nominee, Macarthur Berrigurra Pty Ltd, commenced an action on May 24, 2011 in the Supreme Court of Queensland, Australia, to require MCG and the two associated companies to complete the conversion. On January 30, 2012, the court ordered that all parties perform the steps required to enable Macarthur to convert the loan to equity and that Macarthur's court costs be paid. Macarthur, through its nominee Macarthur Berrigurra, now holds its equity interest in MCG.

Claims and Litigation Relating to Indemnities or Historical Operations

Oklahoma Lead Litigation. Gold Fields Mining, LLC (Gold Fields) is a dormant, non-coal producing entity that was previously managed and owned by Hanson PLC, the Company's predecessor owner. In a February 1997 spin-off, Hanson PLC transferred ownership of Gold Fields to the Company, despite the fact that Gold Fields had no ongoing operations and the Company had no prior involvement in its past operations. Gold Fields is currently one of the Company's subsidiaries. The Company indemnified TXU Group with respect to certain claims relating to a former affiliate of Gold Fields. A predecessor of Gold Fields formerly operated two lead mills near Picher, Oklahoma prior to the 1950s and mined, in accordance with lease agreements and permits, approximately 0.15% of the total amount of the crude ore mined in the county.

Gold Fields and several other companies are defendants in a property damage lawsuit pending in the U.S. District Court for the Northern District of Oklahoma arising from past operations near Picher, Oklahoma. The plaintiffs are seeking compensatory damages for diminution in property values and punitive damages. Gold Fields has entered into a settlement with plaintiffs and the case has been stayed pending receipt of releases from all plaintiffs. Gold Fields was also a defendant in another case alleging property damage and pending in the U.S. District Court for the Northern District of Oklahoma arising out of past operations near Picher, Oklahoma, but the court granted summary judgment in Gold Field's favor in that case.

Gold Fields and several other companies are also defendants in a personal injury lawsuit pending in the U.S. District Court for the Northern District of Oklahoma arising from past operations near Picher, Oklahoma. The four plaintiffs are seeking compensatory damages for cognitive impairments allegedly caused by exposure to lead and punitive damages. Gold Fields has entered into a settlement with plaintiffs and other potential personal injury claimants. The case has been stayed pending receipt of releases from all plaintiffs/claimants and court approval of the settlement on behalf of minor plaintiffs/claimants.

In June 2005, Gold Fields and other potentially responsible parties (PRPs) received a letter from the U. S. Department of Justice alleging that the potentially responsible parties' mining operations caused the U.S. Environmental Protection Agency (EPA) to incur approximately \$125 million in residential yard remediation costs at Picher, Oklahoma and will cause the EPA to incur additional remediation costs relating to historical mining sites. In June 2008, Gold Fields and other PRPs received letters from the U.S. Department of Justice and the EPA re-initiating settlement negotiations. Gold Fields continues to participate in the settlement discussions. Gold Fields believes it has meritorious defense to these claims.

In February 2005, the state of Oklahoma, on behalf of itself and several other parties, sent a notice to Gold Fields and other companies regarding a possible natural resources damage claim. The state of Oklahoma has also indicated that it seeks to recover remediation costs from these parties.

The outcome of litigation and these claims are subject to numerous uncertainties. Based on the Company's evaluation of the issues and their potential impact, the amount of any future loss cannot be reasonably estimated. However, based on current information, the Company believes these claims are likely to be resolved without a material adverse effect on its financial condition, results of operations or cash flows.

PEABODY ENERGY CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Environmental Claims and Litigation

Environmental claims have been asserted against Gold Fields related to activities of Gold Fields or a former affiliate. Gold Fields or the former affiliate has been named a potentially responsible party (PRP) at five national priority list sites based on the Superfund Amendments and Reauthorization Act of 1986. Claims were asserted at 13 additional sites, bringing the total to 18, which have since been reduced to 11 by completion of work, transfer or regulatory inactivity. The number of PRP sites in and of itself is not a relevant measure of liability because the nature and extent of environmental concerns varies by site, as does the estimated share of responsibility for Gold Fields or the former affiliate. Undiscounted liabilities for environmental cleanup-related costs for all of the sites noted above were \$52.5 million as of December 31, 2011 and \$51.1 million as of December 31, 2010, \$11.6 million and \$6.3 million of which was reflected as a current liability, respectively. These amounts represent those costs that the Company believes are probable and reasonably estimable.

Significant uncertainty exists as to whether claims will be pursued against Gold Fields in all cases, and where they are pursued, the amount of the eventual costs and liabilities, which could be greater or less than the liabilities recorded in the consolidated balance sheets. Based on the Company's evaluation of the issues and their potential impact, the total amount of any future loss cannot be reasonably estimated. However, based on current information, the Company believes these claims and litigation are likely to be resolved without a material adverse effect on its financial condition, results of operations or cash flows.

Native Village of Kivalina and City of Kivalina v. ExxonMobil Corporation, et al. In February 2008, the Native Village of Kivalina and the City of Kivalina filed a lawsuit in the U.S. District Court for the Northern District of California against the Company, several owners of electricity generating facilities and several oil companies. The plaintiffs are the governing bodies of a village in Alaska that they contend is being destroyed by erosion allegedly caused by global warming that the plaintiffs attribute to emissions of greenhouse gases by the defendants. The plaintiffs assert claims for nuisance, and allege that the defendants have acted in concert and are jointly and severally liable for the plaintiffs' damages. The suit seeks damages for lost property values and for the cost of relocating the village. The defendants filed motions to dismiss on the grounds of lack of personal and subject matter jurisdiction. In June 2009, the court granted defendants' motion to dismiss for lack of subject matter jurisdiction finding that plaintiffs' federal claim for nuisance is barred by the political question doctrine and for lack of standing. The plaintiffs appealed the court's dismissal to the U.S. Court of Appeals for the Ninth Circuit, which heard oral arguments on November 28, 2011.

Other

In addition, at times the Company becomes a party to other claims, lawsuits, arbitration proceedings and administrative procedures in the ordinary course of business in the U.S., Australia and other countries where the Company does business.

In June 2007, the New York Office of the Attorney General served a letter and subpoena on the Company, seeking information and documents relating to the Company's disclosure to investors of risks associated with possible climate change and related legislation and regulations. The Company believes it has made full and proper disclosure of these potential risks. Based on current information, the Company believes that the ultimate resolution of such other pending or threatened proceedings is not reasonably likely to have a material adverse effect on its financial position, results of operations or liquidity.

(24) Summary Quarterly Financial Information (Unaudited)

A summary of the unaudited quarterly results of operations for the years ended December 31, 2011 and 2010 is presented below.

	Year Ended December 31, 2011			
	First Quarter	Second Quarter	Third Quarter	Fourth Quarter
	(In millions, except per share data)			
Revenues	\$1,743.1	\$1,980.5	\$1,997.2	\$2,253.6
Operating profit	314.3	479.3	381.5	418.3
Income from continuing operations, net of income taxes	194.6	307.8	285.6	222.5
Net income	178.7	292.2	281.4	194.0
Net income attributable to common stockholders	176.5	284.8	274.0	222.4
Basic EPS — continuing operations ⁽¹⁾	0.71	1.11	1.03	0.93
Diluted EPS — continuing operations ⁽¹⁾	\$0.70	\$1.10	\$1.02	\$0.92
Weighted average shares used in calculating basic EPS	268.9	269.0	269.2	269.3
Weighted average shares used in calculating diluted EPS	272.8	270.5	270.6	270.2

⁽¹⁾ EPS for the quarters may not sum to the amounts for the year as each period is computed on a discrete basis. The fourth quarter results of operations include Macarthur's results of operations from the date of acquisition. The third and fourth quarters operating profit reflects \$9.1 million and \$76.1 million, respectively, of acquisition costs related to the Macarthur acquisition and an adverse impact of a third quarter roof fall and recovery of longwall operations at the Company's North Goonyella Mine in Australia, impacting the third and fourth quarters by \$122.9 million and \$111.8 million, respectively. Income from continuing operations, net of income taxes in the first, second and fourth quarters included non-cash tax expense of \$6.4 million, \$15.4 million and \$16.0 million, respectively, from the remeasurement of non-U.S. income tax accounts, while the third quarter included a non-cash tax benefit of \$38.7 million.

	Year Ended December 31, 2010			
	First Quarter	Second Quarter	Third Quarter	Fourth Quarter
	(In millions, except per share data)			
Revenues	\$1,490.6	\$1,629.9	\$1,826.7	\$1,792.7
Operating profit	255.1	325.7	447.3	326.3
Income from continuing operations, net of income taxes	147.8	215.7	239.3	223.8
Net income	136.7	214.2	236.3	215.0
Net income attributable to common stockholders	133.7	206.2	224.1	210.0
Basic EPS — continuing operations ⁽¹⁾	0.54	0.77	0.84	0.81
Diluted EPS — continuing operations ⁽¹⁾	\$0.54	\$0.77	\$0.84	\$0.80
Weighted average shares used in calculating basic EPS	266.5	266.6	267.1	267.7
Weighted average shares used in calculating diluted EPS	268.2	268.3	268.6	270.3

⁽¹⁾ EPS for the quarters may not sum to the amounts for the year as each period is computed on a discrete basis.

Operating profit in the second, third and fourth quarters of 2010 reflects higher contract pricing in Australia. Operating profit for the fourth quarter also includes an adverse impact related to flooding in Queensland, Australia and lower results from the Company's Trading and Brokerage operations. Income from continuing operations, net of income taxes in the first, third and fourth quarters included non-cash tax expense of \$5.5 million, \$43.0 million and \$18.9 million, respectively, from the remeasurement of non-U.S. income tax accounts, while the second quarter included a non-cash tax benefit of \$19.5 million.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

(25) Segment Information

The Company reports its operations primarily through the following reportable operating segments: “Western U.S. Mining,” “Midwestern U.S. Mining,” “Australian Mining,” “Trading and Brokerage” and “Corporate and Other.” The Company's Western U.S. Mining operations reflect the aggregation of the Powder River Basin, Southwest and Colorado mining operations. The mines in that segment are characterized by predominantly surface mining extraction processes, coal with a lower sulfur content and Btu and higher customer transportation costs (due to longer shipping distances). The Company's Midwestern U.S. Mining operations reflect the Company's Illinois and Indiana mining operations, which are characterized by a mix of surface and underground mining extraction processes, coal with a higher sulfur content and Btu and lower customer transportation costs (due to shorter shipping distances).

Geologically, Western operations mine bituminous and subbituminous coal deposits, and Midwestern operations mine bituminous coal deposits. The principal business of the Western and Midwestern U.S. Mining segments is the mining, preparation and sale of thermal coal, sold primarily to electric utilities in the U.S., with a portion sold into the seaborne markets.

The Company's Australian Mining operations consist of its mines in Queensland and New South Wales, Australia. The mines in that segment are characterized by both surface and underground extraction processes, mining various qualities of metallurgical (low-sulfur, high Btu coal) and thermal coal. The metallurgical coal qualities include hard coking coal, semi-hard coking coal, semi-soft coal and pulverized coal injection coal. The business of the Company's Australian Mining operations are primarily export focused with customers spread across several countries, while a portion of the coal is sold to Australian steel producers and power generators. Generally, revenues from individual countries vary year by year based on the demand for electricity, the demand for steel, the strength of the global economy and several other factors including those specific to each country.

The Company's Trading and Brokerage segment brokers coal sales of other coal producers both as principal and agent, and trades coal, freight and freight-related contracts. Corporate and Other includes selling and administrative expenses, equity income (loss) from the Company's joint ventures, certain asset sales, resource management costs and revenues, coal royalty expense, costs associated with past mining obligations, expenses related to the Company's other commercial activities such as generation development and Btu Conversion costs and provisions for certain litigation.

The Company's chief operating decision maker uses Adjusted EBITDA as the primary measure of segment profit and loss. The Company defines Adjusted EBITDA as income from continuing operations before deducting net interest expense, income taxes, asset retirement obligation expense and depreciation, depletion and amortization.

Operating segment results for the year ended December 31, 2011 were as follows (total assets as of December 31, 2011):

	Western U.S. Mining (Dollars in millions)	Midwestern U.S. Mining	Australian Mining	Trading and Brokerage	Corporate and Other	Consolidated
Revenues	\$2,900.4	\$1,481.1	\$3,080.7	\$475.1	\$37.1	\$7,974.4
Adjusted EBITDA	766.0	408.9	1,194.3	197.0	(437.5)	2,128.7
Total assets	3,095.8	672.5	8,568.9	633.3	3,762.5	16,733.0
Additions to property, plant, equipment and mine development	228.5	108.2	439.6	0.9	69.7	846.9
Loss from equity affiliates	—	—	—	—	19.2	19.2

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)

Operating segment results for the year ended December 31, 2010 were as follows (total assets as of December 31, 2010):

	Western U.S. Mining (Dollars in millions)	Midwestern U.S. Mining	Australian Mining	Trading and Brokerage	Corporate and Other	Consolidated
Revenues	\$2,706.3	\$1,320.6	\$2,399.9	\$291.1	\$22.0	\$6,739.9
Adjusted EBITDA	816.7	322.1	977.4	77.2	(354.7)	1,838.7
Total assets	3,008.4	608.0	3,603.4	398.2	3,745.1	11,363.1
Additions to property, plant, equipment and mine development	143.3	224.9	138.7	0.9	40.1	547.9
Loss from equity affiliates	—	—	—	—	1.7	1.7

Operating segment results for the year ended December 31, 2009 were as follows (total assets as of December 31, 2009):

	Western U.S. Mining (Dollars in millions)	Midwestern U.S. Mining	Australian Mining	Trading and Brokerage	Corporate and Other	Consolidated
Revenues	\$2,612.6	\$1,303.8	\$1,512.6	\$391.0	\$27.0	\$5,847.0
Adjusted EBITDA	721.5	281.9	410.5	193.4	(344.5)	1,262.8
Total assets	3,087.6	444.4	3,386.8	673.0	2,363.5	9,955.3
Additions to property, plant, equipment and mine development	201.9	104.2	69.3	1.8	6.2	383.4
Loss from equity affiliates	—	—	—	—	69.1	69.1

A reconciliation of adjusted EBITDA to consolidated income from continuing operations, net of income taxes follows:

	Year Ended December 31, 2011 2010 2009 (Dollars in millions)		
Total adjusted EBITDA	\$2,128.7	\$1,838.7	\$1,262.8
Depreciation, depletion and amortization	(482.2)	(437.1)	(400.5)
Asset retirement obligation expense	(53.1)	(47.2)	(39.9)
Interest expense	(238.6)	(222.0)	(201.1)
Interest income	18.9	9.6	8.1
Income tax provision	(363.2)	(315.4)	(186.2)
Income from continuing operations, net of income taxes	\$1,010.5	\$826.6	\$443.2

The following table presents revenues as a percent of total revenue from external customers by geographic region:

	Year Ended December 31, 2011 2010 2009			
U.S.	62.0	% 64.6	% 73.2	%
Japan	10.2	% 9.1	% 7.1	%
South Korea	5.5	% 3.7	% 2.2	%
India	5.2	% 4.9	% 3.8	%
Other	17.1	% 17.7	% 13.7	%
Total	100	% 100	% 100	%

The Company attributes revenue to individual countries based on the location of the physical delivery of the coal.

EXHIBIT INDEX

The exhibits below are numbered in accordance with the Exhibit Table of Item 601 of Regulation S-K.

Exhibit No. Description of Exhibit

3.1 †	Third Amended and Restated Certificate of Incorporation of the Registrant, as amended.
3.2	Amended and Restated By-Laws of the Registrant (Incorporated by reference to Exhibit 3.1 of the Registrant's Current Report on Form 8-K, filed September 16, 2008).
4.1	Rights Agreement, dated as of July 24, 2002, between the Registrant and EquiServe Trust Company, N.A., as Rights Agent (which includes the form of Certificate of Designations of Series A Junior Preferred Stock of the Registrant as Exhibit A, the form of Right Certificate as Exhibit B and the Summary of Rights to Purchase Preferred Shares as Exhibit C) (Incorporated herein by reference to Exhibit 4.1 to the Registrant's Registration Statement on Form 8-A, filed July 24, 2002).
4.2	Certificate of Designations of Series A Junior Participating Preferred Stock of the Registrant, filed with the Secretary of State of the State of Delaware on July 24, 2002 (Incorporated herein by reference to Exhibit 3.1 to the Registrant's Registration Statement on Form 8-A, filed July 24, 2002).
4.3	Certificate of Adjustment delivered by the Registrant to Equiserve Trust Company, N.A., as Rights Agent, on March 29, 2005 (Incorporated by reference to Exhibit 4.2 to Amendment No. 1 to the Registrant's Registration Statement on Form 8-A/A, filed March 29, 2005).
4.4	Certificate of Adjustment delivered by the Registrant to American Stock Transfer & Trust Company, as Rights Agent, on February 22, 2006 (Incorporated by reference to Exhibit 4.2 to Amendment No. 2 to the Registrant's Registration Statement on Form 8-A/A, filed February 22, 2006).
4.5	Specimen of stock certificate representing the Registrant's common stock, \$.01 par value (Incorporated by reference to Exhibit 4.13 to Amendment No. 4 to the Registrant's Form S-1 Registration Statement No. 333-55412, filed May 1, 2001).
4.6	Indenture, dated as of March 19, 2004, between the Registrant and U.S. Bank National Association, as trustee (Incorporated by reference to Exhibit 4.12 of the Registrant's Quarterly Report on Form 10-Q for the quarter ended March 31, 2004).
4.7	7 ³ /8% Senior Notes Due 2016 Tenth Supplemental Indenture, dated as of October 12, 2006 among the Registrant, the Guaranteeing Subsidiaries (as defined therein), and U.S. Bank National Association, as trustee (Incorporated by reference to Exhibit 4.1 of the Registrant's Current Report on Form 8-K, filed October 13, 2006).
4.8	7 ³ /8% Senior Notes Due 2016 Thirteenth Supplemental Indenture, dated as of November 10, 2006 among the Registrant, the Guaranteeing Subsidiaries (as defined therein), and U.S. Bank National Association, as trustee (Incorporated by reference to Exhibit 4.33 of the Registrant's Annual Report on Form 10-K for the year ended December 31, 2006).
4.9	7 ³ /8% Senior Notes Due 2016 Sixteenth Supplemental Indenture, dated as of January 31, 2007, among the Registrant, the Guaranteeing Subsidiaries (as defined therein), and U.S. Bank National Association, as trustee (Incorporated by reference to Exhibit 4.34 of the Registrant's Annual Report on Form 10-K for the year ended December 31, 2006).
4.10	7 ³ /8% Senior Notes Due 2016 Nineteenth Supplemental Indenture, dated as of June 14, 2007, among the Registrant, the Guaranteeing Subsidiaries (as defined therein), and U.S. Bank National Association, as trustee (Incorporated by reference to Exhibit 4.3 of the Registrant's Quarterly Report on Form 10-Q for the quarter ended June 30, 2007).
4.11	7 ³ /8% Senior Notes Due 2016 Twenty-Second Supplemental Indenture, dated as of November 14, 2007, among the Registrant, the Guaranteeing Subsidiaries (as defined therein), and U.S. Bank National Association, as trustee (Incorporated by reference to Exhibit 4.40 of the Registrant's Annual Report on Form 10-K for the year ended December 31, 2007).
4.12	

7³/8% Senior Notes Due 2016 Thirty-First Supplemental Indenture, dated as of March 13, 2009, among the Registrant, the Guaranteeing Subsidiaries (as defined therein), and U.S. Bank National Association, as trustee (Incorporated by reference to Exhibit 4.2 of the Registrant's Quarterly Report on Form 10-Q for the quarter ended March 31, 2009).

Table of Contents

Exhibit No. Description of Exhibit

- 4.13 7 ³/₈% Senior Notes Due 2016 Thirty-Sixth Supplemental Indenture dated as of April 21, 2011, among Peabody Energy Corporation, the guarantors named therein and U.S. Bank National Association, as trustee (Incorporated by reference to Exhibit 4.1 of the Registrant's Quarterly Report on Form 10-Q for the quarter ended June 30, 2011).
- 4.14 7⁷/₈% Senior Notes Due 2026 Eleventh Supplemental Indenture, dated as of October 12, 2006, among the Registrant, the Guaranteeing Subsidiaries (as defined therein), and U.S. Bank National Association, as trustee (Incorporated by reference to Exhibit 4.2 of the Registrant's Current Report on Form 8-K, filed October 13, 2006).
- 4.15 7⁷/₈% Senior Notes Due 2026 Fourteenth Supplemental Indenture, dated as of November 10, 2006, among the Registrant, the Guaranteeing Subsidiaries (as defined therein), and U.S. Bank National Association, as trustee (Incorporated by reference to Exhibit 4.36 of the Registrant's Annual Report on Form 10-K for the year ended December 31, 2006).
- 4.16 7⁷/₈% Senior Notes Due 2026 Seventeenth Supplemental Indenture, dated as of January 31, 2007, among the Registrant, the Guaranteeing Subsidiaries (as defined therein), and U.S. Bank National Association, as trustee (Incorporated by reference to Exhibit 4.37 of the Registrant's Annual Report on Form 10-K for the year ended December 31, 2006).
- 4.17 7⁷/₈% Senior Notes Due 2026 Twentieth Supplemental Indenture, dated as of June 14, 2007, among the Registrant, the Guaranteeing Subsidiaries (as defined therein), and U.S. Bank National Association, as trustee (Incorporated by reference to Exhibit 4.4 of the Registrant's Quarterly Report on Form 10-Q for the quarter ended June 30, 2007).
- 4.18 7⁷/₈% Senior Notes Due 2026 Twenty-Third Supplemental Indenture, dated as of November 14, 2007, among the Registrant, the Guaranteeing Subsidiaries (as defined therein), and U.S. Bank National Association, as trustee (Incorporated by reference to Exhibit 4.45 of the Registrant's Annual Report on Form 10-K for the year ended December 31, 2007).
- 4.19 7⁷/₈% Senior Notes Due 2026 Thirty-Second Supplemental Indenture, dated as of March 13, 2009, among the Registrant, the Guaranteeing Subsidiaries (as defined therein), and U.S. Bank National Association, as trustee (Incorporated by reference to Exhibit 4.3 of the Registrant's Quarterly Report on Form 10-Q for the quarter ended March 31, 2009).
- 4.20 7⁷/₈% Senior Notes Due 2026 Thirty-Seventh Supplemental Indenture, dated as of April 21, 2011, among Peabody Energy Corporation, the guarantors named therein and U.S. Bank National Association, as trustee (Incorporated by reference to Exhibit 4.2 of the Registrant's Quarterly Report on Form 10-Q for the quarter ended June 30, 2011).
- 4.21 6.500% Senior Notes due 2020 Thirty-Third Supplemental Indenture, dated as of August 25, 2010, among Peabody Energy Corporation, the guarantors named therein and U.S. Bank National Association, as trustee (Incorporated by reference to Exhibit 4.1 of the Registrant's Current Report on Form 8-K, filed August 27, 2010).
- 4.22 6.500% Senior Notes due 2020 Thirty-Eighth Supplemental Indenture, dated as of April 21, 2011, among Peabody Energy Corporation, the guarantors named therein and U.S. Bank National Association, as trustee (Incorporated by reference to Exhibit 4.3 of the Registrant's Quarterly Report on Form 10-Q for the quarter ended June 30, 2011).
