EXPLANATORY NOTE REGARDING RESTATEMENT

Unless the context otherwise requires, we use the terms AmpliPhi Biosciences, AmpliPhi, we, us, the Company and our in this report to refer to AmpliPhi Biosciences Corporation and its subsidiaries.

This Registration Statement on Form 10 includes restatement of the following previously filed consolidated financial statements and data (and related disclosures): (1) our consolidated balance sheets as of December 31, 2013, December 31, 2012, and December 31, 2011 and our consolidated statements of operations and comprehensive loss, consolidated statement of stockholders' equity (deficit), and consolidated statement of cash flows for the fiscal years ended December 31, 2013, December 31, 2012 and December 31, 2011; (2) our consolidated balance sheet as of June 30, 2014, and our consolidated statements of operations and comprehensive loss, consolidated statement of stockholders' equity (deficit), and consolidated statement of cash flows for the six months ended June 30, 2014, (3) our management's discussion and analysis of financial condition and results of operations as of and for our fiscal years ended December 31, 2013, 2012 and 2011, contained in Item 2 of this Registration Statement on Form 10 and (4) our management's discussion and analysis of financial condition and results of operations as of and for the six months ended June 30, 2014 and 2013. All the aforementioned periods are collectively referenced as "Affected Periods".

The Company's previously issued December 31, 2013 financial statements have been restated to remove deemed dividends booked on the issuance of preferred shares and to recognize the increase in derivative expense due to adding several features to the valuation model used to measure the compound derivatives and changing from a Black-Scholes valuation model to a Monte Carlo valuation model. Additional paid in capital and accumulated deficit have been reduced by \$8,464,000 after removing the deemed dividends. Loss on derivative liabilities increased by \$1,755,000 to \$42,317,000 due to the change in the valuation model.

The Company also contracted a valuation team to review the purchase price allocation of Biocontrol. As a result, in process research and development (IPR&D) was restated and a new intangible asset, patents, was recognized. For the Biocontrol acquisition, \$493,000 of IPR&D was reclassified to patents. In addition, amortization expense for patents of \$31,000 was recognized in both 2012 and 2013.

As a result of these corrections, the Company's net loss in 2013 increased \$1,787,000 to \$57,648,000. The net loss per share decreased by \$0.07 per share to \$(0.57) per share which also reflects the removal of the deemed dividends.

The Company's previously issued 2012 financial statements have been restated to reclassify the revenue from the sale of assets that was previously reported as part of revenue to a gain on sale of assets from discontinued operations. As a result of this correction, revenue for 2012 was reduced \$3,150,000 and a gain on sale of assets from discontinued operations was recorded for \$3,150,000. The net loss per share remained the same, but additional disclosures were added to the Consolidated Statements of Operations and Comprehensive Loss for net loss per share from continuing operations and gain from discontinued operations per share.

For the Special Phage Services, \$5,161,000 of goodwill was reclassified to IPR&D. The overall purchase price of Special Phage Services was reduced by \$299,000 due to a decrease in the valuation of contingent shares reserved for the milestone agreement. This further reduced goodwill by \$299,000 and paid-in-capital contingent shares by \$299,000.

For more information regarding the restatement, please refer to Management's Discussion and Analysis of Financial Condition and Results of Operations and Correction of Errors in Note 14 to the Notes to our Consolidated Financial Statements for the Year Ended December 31, 2013 and Note 12 to the Notes to our Consolidated Financial Statements

Edgar Filing: AmpliPhi Biosciences Corp - Form 10-12G/A
for the Years Ended December 31, 2012 and 2011.

TABLE OF CONTENTS

SPECIAL NOTE REGARDING FORWARD-LOOKING STATEMENTS

This registration statement contains forward-looking statements. The forward-looking statements are contained principally in the sections entitled Risk Factors, Management's Discussion and Analysis of Financial Condition and Results of Operations and Business. These statements relate to future events or to our future financial performance and involve known and unknown risks, uncertainties and other factors which may cause our actual results, performance or achievements to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements. Forward-looking statements include, but are not limited to, statements about:

our ability to manufacture, or otherwise secure the manufacture of, sufficient amounts of our product candidates for our preclinical studies and clinical trials;

our clinical development plans, including planned clinical trials;

our research and development plans, including our plans to initiate at least one new clinical study in 2015;

our ability to select combinations of phages to formulate our product candidates;

the safety and efficacy of our product candidates;

the anticipated regulatory pathways for our product candidates;

our ability to successfully complete preclinical and clinical development of, and obtain regulatory approval of our product candidates and commercialize any approved products on our expected timeframes or at all;

the content and timing of submissions to and decisions made by the FDA and other regulatory agencies;

our ability to leverage the experience of our management team;

our ability to attract and keep management and other key personnel;

the capacities and performance of our suppliers, manufacturers, contract research organizations, or CROs, and other third parties over whom we have limited control;

the actions of our competitors and success of competing drugs that are or may become available;

our expectations with respect to future growth and investments in our infrastructure, and our ability to effectively manage any such growth;

the size and potential growth of the markets for any of our product candidates, and our ability to capture share in or impact the size of those markets;

the benefits of our products and product candidates;

market and industry trends;

the effects of government regulation and regulatory developments, and our ability and the ability of the third parties with whom we engage to comply with applicable regulatory requirements;

our financial performance, including our net revenue, return rates and related estimates, cost of revenue, gross profit and gross margin, operating expenses, utilization of net operating losses, or NOLs, stock-based compensation expense, cash flows, expected uses of anticipated cash flow, funding requirements and market risk;

our expectations regarding future planned expenditures;

our expectations with respect to product pricing;

our ability to effectively remediate any significant deficiencies or material weaknesses in our internal control over financial reporting;

2

TABLE OF CONTENTS

our ability to achieve and maintain effective internal control over financial reporting in accordance with Section 404 of the Sarbanes-Oxley Act;

our ability to obtain, maintain and successfully enforce adequate patent and other intellectual property protection of any of our products and product candidates;

our ability to operate our business without infringing the intellectual property rights of others; and

our plans to potentially transact business outside the United States.

In some cases, you can identify these statements by terms such as anticipates, believes, could, estimates, expects, intends, may, plans, potential, predicts, projects, should, will, would or the negative of those terms and their corresponding expressions. These forward-looking statements reflect our management's beliefs and views with respect to future events and are based on estimates and assumptions as of the date of this registration statement and are subject to risks and uncertainties. We discuss many of these risks in greater detail in the section entitled Risk Factors. Moreover, we operate in a very competitive and rapidly changing environment. New risks emerge from time to time. It is not possible for our management to predict all risks, nor can we assess the impact of all factors on our business or the extent to which any factor, or combination of factors, may cause actual results to differ materially from those contained in any forward-looking statements we may make. Given these uncertainties, you should not place undue reliance on these forward-looking statements.

You should read this registration statement and the documents that we reference in this registration statement, and have filed as exhibits to this registration statement, completely and with the understanding that our actual future results may be materially different from what we expect. We qualify all of the forward-looking statements in this registration statement by these cautionary statements.

Except as required by law, we assume no obligation to update these forward-looking statements publicly, or to update the reasons actual results could differ materially from those anticipated in these forward-looking statements, even if new information becomes available in the future.

Item 1. Business.

Company History

We were incorporated under the laws of the State of Washington in March 1989 as a wholly owned subsidiary of Immunex Corporation and began operations as an independent company in 1992 as Targeted Genetics Corporation (TGEN). This predecessor company was effectively closed and any remaining technology was licensed or otherwise sold.

In January 2011, we completed the acquisition of Biocontrol Ltd, which we refer to as Biocontrol, an antimicrobial biotechnology company based in the United Kingdom, with the goal of developing their phage therapy programs using funding from the sale of our legacy gene therapy assets. On February 22, 2011, we changed our name to AmpliPhi Biosciences Corporation.

In November 2012, we completed the acquisition of Special Phage Holdings Pty Ltd, a company based in Australia, which we refer to as SPH, pursuant to our offer to acquire all outstanding shares of SPH from its shareholders under the terms of a Shareholder Sale Agreement and a Managers Warranty Deed. SPH was formed in 2004 to address the rapidly escalating problem of antibiotic resistance through the development of a series of bacteriophage-based treatments.

We intend to reincorporate as AmpliPhi Biosciences Corporation in the State of Delaware.

Edgar Filing: AmpliPhi Biosciences Corp - Form 10-12G/A

Our principal executive offices are located at 4870 Sadler Road, Suite 300, Glen Allen, VA 23060. The telephone number at our principal executive office is (804) 205-5069. Our website address is <http://www.ampliphio.com>. Our website and the information contained on, or that can be accessed through, our website will not be deemed to be incorporated by reference in, and are not considered part of, this registration statement. You should not rely on our website or any such information in making your decision whether to purchase our common stock.

3

TABLE OF CONTENTS

Implications of Being an Emerging Growth Company

We are an emerging growth company, as defined in the Jumpstart Our Business Startups Act of 2012. We will remain an emerging growth company until the earliest of (1) the last day of the first fiscal year(a) following the fifth anniversary of the completion of an initial public offering, (b) in which we have total annual gross revenue of at least \$1.0 billion or (c) in which we are deemed to be a large accelerated filer, which means the market value of our common stock that is held by non-affiliates exceeded \$700.0 million as of the prior June 30th; or (2) the date on which we have issued more than \$1.0 billion in non-convertible debt during the prior three-year period. We refer to the Jumpstart Our Business Startups Act of 2012 herein as the JOBS Act and references herein to emerging growth company shall have the meaning associated with it in the JOBS Act.

As an emerging growth company, we intend to take advantage of specified reduced disclosure and other requirements that are otherwise applicable generally to public companies. These provisions include:

only two years of audited consolidated financial statements in addition to any required unaudited interim financial statements with correspondingly reduced Management's Discussion and Analysis of Financial Conditions and Results of Operations disclosure;

reduced disclosure about our executive compensation arrangements;

no requirement that we hold non-binding advisory votes on executive compensation or golden parachute arrangements; and

exemption from the auditor attestation requirement in the assessment of our internal control over financial reporting.

Under the JOBS Act, emerging growth companies can delay adopting new or revised accounting standards issued subsequent to the enactment of the JOBS Act until such time as those standards apply to private companies. We have irrevocably elected not to avail ourselves of this exemption from new or revised accounting standards, and, therefore, will be subject to the same new or revised accounting standards as other public companies that are not emerging growth companies.

We also qualify as a smaller reporting company, as defined by Regulation S-K under the Securities Act of 1933, as amended, which we refer to as the Securities Act. As such, we also are exempt from the auditor attestation requirements of Section 404 of the Sarbanes-Oxley Act and also are subject to less extensive disclosure requirements regarding executive compensation in our periodic reports and proxy statements, and to exemptions from the requirements to hold a nonbinding advisory vote on executive compensation and shareholder approval of any golden parachute payments not previously approved. We will continue to be deemed a smaller reporting company until our public float exceeds \$75 million on the last day of our second fiscal quarter in any fiscal year.

As used in this registration statement, unless the context requires otherwise, the Company, we, us and our refer to AmpliPhi Biosciences Corporation, a Washington corporation, or, where appropriate, Targeted Genetics Corporation or AmpliPhi Biosciences Corporation, a Delaware corporation to be formed in connection with the Company's planned reincorporation.

Company Overview

We are a biotechnology company focused on the discovery, development and commercialization of novel phage therapeutics. Our proprietary pipeline is based on the use of bacteriophages, a family of viruses that infect only bacteria. Phages have powerful and highly selective mechanisms of action that permit them to target and kill specific bacterial pathogens, including the so-called multi-drug-resistant (MDR) or Superbug strains.

We believe that we are a leading developer of phage-based therapeutics. We are combining our proprietary approach and expertise in identifying, characterizing and developing naturally occurring bacteriophages with that of our collaboration partners in bacteriophage biology, drug engineering, development

TABLE OF CONTENTS

and manufacturing, to develop second-generation bacteriophage products. We believe that phages represent a promising means to treat bacterial infections, especially those that have developed resistance to current medicines.

The extensive use of antibiotics, since their discovery in the 1940s, has resulted in drug resistance among many disease-causing bacteria. Resistance to antibiotics, according to the Centers for Disease Control (CDC), threatens to reverse the medical advances of the last half-century. Examples of clinically important microbes that are rapidly developing resistance to available antimicrobials include bacteria that cause skin, bone, lung and bloodstream infections (e.g., *S. aureus* and MRSA), pneumonia and lung infections in the community, hospital and cystic fibrosis (e.g., *A. baumannii*, *P. aeruginosa*, and *K. pneumoniae*), meningitis (e.g., *S. pneumoniae*), urinary tract and gastrointestinal infections (e.g., *E. coli* and *C. difficile*). As a phage kills bacteria in ways entirely unlike the mechanisms used by antibiotics, multi-drug resistant bacteria are not resistant to a phage in the same manner. Furthermore, as new resistant bacteria emerge, it should be possible to identify new phages that will still have efficacy.

Our lead program is AmpliPhage-002, for the treatment of *S. aureus* infections (including methicillin-resistant MRSA). We also have two other product candidates in development: AmpliPhage-001 for the treatment of *P. aeruginosa* lung infections in CF patients, and AmpliPhage-004 for the treatment of *C. difficile* infections.

We are developing these phage product candidates using our proprietary discovery and development platform, which is designed for rapid identification, characterization and manufacturing of multiple phage therapies. Each product candidate combines several carefully chosen phages which target a specific disease-causing bacterial pathogen such as MRSA, *P. aeruginosa* and *C. difficile*. We believe that our understanding of unique regulatory and development requirements of bacteriophage biology combined with the clinical and scientific expertise of our collaboration partners will enable the rapid advancement of phage treatments through the clinic and eventually to the market.

In March 2013, we entered into an Exclusive Channel Collaboration (ECC) with Intrexon Corporation, which we refer to as Intrexon, directed towards the research, development and commercialization of new bacteriophage-based therapies to target specific antibiotic-resistant infections, including for use in the treatment of bacterial infections associated with acute and chronic wounds, the treatment of acute and chronic *P. aeruginosa* lung infections, and the treatment of infections of *C. difficile*.

In April 2013, we entered into a collaboration agreement, which we refer to as the April Collaboration Agreement, and on September 5, 2013, we entered into a license agreement, which we refer to as the Leicester License Agreement, with the University of Leicester to develop a phage therapy that targets and kills all toxin types of *C. difficile*. Pursuant to the Leicester License Agreement, we may be obligated to pay the University of Leicester a percentage royalty in the single digits and an aggregate of up to £575,000 in milestone payments. We also entered into a collaboration agreement on August 1, 2013, which we refer to as the August Collaboration Agreement, with the University of Leicester and the University of Glasgow, whereby the University of Glasgow will carry out certain animal model development work. Pursuant to the August Collaboration Agreement, we may be obligated to pay up to a total of approximately £205,000 in milestone payments.

In June 2013, we entered a Cooperative Research and Development Agreement (CRADA) with the United States Army Reserve Medical Corps (USAMRMC) and the Walter Reed Army Institute of Research (WRAIR) focusing on developing bacteriophage therapeutics to treat *S. aureus*, *E. coli* and *P. aeruginosa* infections.

We plan to initiate a clinical trial in 2015 in collaboration with the U.S. Army that will support the development of a treatment for *S. Aureus* infections for wound and skin infections.

In October 2014, we entered into a collaboration agreement, effect as of November 9, 2014, with the University of Leicester to develop phage therapies targeting *C. difficile*.

TABLE OF CONTENTS

The Need for New Anti-Infective Therapies

The rapid and continuous emergence of antibiotic-resistant bacteria has become a global crisis. While the numbers of novel anti-infective therapies in development are at historically low levels, antibiotic-resistant infections have dramatically increased. The CDC estimates that more than two million people in the United States acquire an antibiotic-resistant infection each year and more than 23,000 of these prove fatal. It is estimated that 50-70% of hospital-acquired infections are resistant to first-line anti-infective therapies. The cumulative annual cost for treating resistant bacterial infections in the United States alone is estimated to be \$20 billion, while the global antibiotics market opportunity is estimated to be \$40.3 billion by 2015.

The CDC's latest report on the matter, *Antibiotic Resistance Threats in the United States, 2013*, notes that there are potentially catastrophic consequences of inaction and ranks *C. difficile* as belonging to the highest tier of threat, Urgent Threats. Despite the potential market opportunity, only two new antibacterial drug applications were approved between 2010 and 2012 compared to eighteen in the period between 1980 and 1984. One of the primary CDC recommendations is the development of new antibiotics to diversify treatment options.

Product Candidates

AmpliPhage-002: Wound and Skin Infections Caused by *S. aureus*

In conjunction with our CRADA with the USAMRMC, we are developing a phage product that is intended to effectively treat acute and chronic wound and skin infections caused by *S. aureus*, including infections caused by methicillin-resistant (MRSA) strains of the same bacterium. MRSA infections are one of the most common causes of hospital-acquired (nosocomial) infections and Global Data estimates the MRSA market for infections alone was more than \$2.7 billion in 2007. This market is forecast to grow to more than \$3.5 billion by 2019.

By screening our proprietary library of phage samples against a panel of *S. aureus* bacterium, we have selected a phage product mix that has demonstrated in in vitro studies greater than 85% efficacy with high overlap against a global diversity panel that includes some of the most virulent isolates of *S. aureus*, including MRSA identified by the U.S. Army.

We plan to initiate a clinical trial in 2015 in collaboration with the U.S. Army that will support the development of a treatment for *S. Aureus* infections for wound and skin infections.

After extensive financial and capability evaluation and a global search we have elected to proceed with cGMP manufacturing at a wholly owned facility that has been constructed in Ljubljana, Slovenia. We have been able to access and hire highly skilled process development and phage manufacturing expertise and believe that we now have control of our proprietary platform from phage identification through final product fill and finish. Our facility inclusive of laboratory and office space is approximately 4,000 sq. ft. and is expected to produce cGMP product for our currently planned and future studies. We believe that this facility should be sufficient to meet our product needs through Phase 3 and initial commercialization. Our current formulation for AmpliPhage -002 is intended for nasal and/or topical delivery via a small spray device. We plan to further formulate our product for delivery to patients with wound and skin infections.

AmpliPhage-001: Lung Infections in Cystic Fibrosis (CF) Patients Caused by *P. aeruginosa*

According to Global Data in April 2013, the market for CF therapeutics was \$1.2 billion in 2012 and forecasted to grow to \$4.6 billion in 2017, with 65% of this market in the United States. One of our lead programs targets *P. aeruginosa*, the most prevalent bacterial infection that leads to the highest mortality in patients with CF with approximately 440 deaths per year in the United States. To develop our products, we have created a global diversity panel of relevant *P. aeruginosa* clinical isolates from CF clinics around the globe. Clinical isolates are bacteria isolated from patients. This diversity panel has been screened against our phage library that was isolated and characterized according to our proprietary discovery and development platform. We have demonstrated *in vitro* that we are able to effectively kill the targeted bacteria with a mixture of a few phages propagated in carefully selected bacterial hosts. Furthermore, our phage mix was selected to exhibit a high degree of overlap, defined as the number of bacteria targeted by more than one phage in the product. We believe that high overlap is an important factor in preventing bacteria from developing resistance to our phage products.

TABLE OF CONTENTS

In collaboration with Institut Pasteur (Paris, France) and Brompton Clinic, Imperial College (London, United Kingdom), we have demonstrated in the preclinical studies described below that phages can effectively treat infections in animal models of acute *P. aeruginosa* lung infections. The graphic below shows the three groups from a study conducted at the Institute Pasteur. Each group consisted of eight mice. Group 1 was treated with Placebo, or PBS, Group 2 was treated with an antibiotic (note the model was optimized for this antibiotic) and Group 3 was treated with an AmpliPhi phage mix. The colored regions, measured by light intensity, or luminescence, demonstrate where the *P. aeruginosa* infection is active and the bacteria are actively replicating. By the 24th hour, the surviving untreated animals (Group 1) are sacrificed as the infection has spread and in some cases has already proved lethal whereas the two treatment groups (Group 2, antibiotic and Group 3, phage) demonstrate effective reduction of the active infection.

7

TABLE OF CONTENTS

Average luminescence for each group is shown below:

Bacterial counts and the number of bacteriophage infection units detected by assay, or phage titers, were measured in these animals after 24 hours, and the results demonstrated that our phage mix effectively lowered the bacterial counts, or CFU, in the mouse lung to levels comparable to antibiotic treatment (PBS vs. antibiotic, $p=0.0003$; PBS vs. bacteriophage, $p=0.0003$). Furthermore, it was evident that phage replicated to high levels in the infected lung. These results are shown in the graphics below.

TABLE OF CONTENTS

In a separate *in vivo* study of acute *P. aeruginosa* infection of the mouse lung conducted at the Brompton Clinic, results demonstrated that our phage mix reduced CFU levels upon simultaneous intranasal administration (six mice in each of the treatment and control groups) and also when administered 24 hours post-bacterial infection (seven mice in the treatment group and eight mice in the control group) using Pa01, a standard strain of *P. aeruginosa*. These results are depicted in the graphics below.

Importantly, a preclinical study conducted at the Institut Pasteur in mice (12 mice in each of the treatment and control groups) demonstrated the ability of our phage mix to reach the lung within two hours of being delivered by oral administration. The phage levels increased between two and six hours post-treatment, and the results were statistically significant (p-value <0.001). A p-value is a statistical measure of the probability that the difference in two values could have occurred by chance. The smaller the p-value, the greater the confidence that the results are significant. These results demonstrate that when orally administered in mice, phages not only reached the lungs but were also able to infect and multiply in target bacteria.

We were granted an advisory meeting with United Kingdom Medicines and Healthcare products Regulatory Agency (MHRA) in the first quarter of 2014 to discuss our plans and intent to move the CF program into additional preclinical testing in preparation for a Phase 1/2 study in CF patients. We also sought advice and comment that our planned Chemistry Manufacturing Controls (CMC) plans were acceptable to the MRHA. The MRHA concurred with our approach and plans as presented, including a first in man dose ranging clinical study in CF patients. Subject to the availability of adequate financing, we expect to continue product selection and formulation work. Upon final product selection, we plan to manufacture the AmpliPhage-001 product in our facility in Ljubljana, Slovenia.

We believe that successful proof of concept in this lung indication could lead to other acute and chronic lung infection markets, such as Ventilator Associated Bacterial Pneumonia (VABP) and Chronic Obstructive Pulmonary Disease (COPD). The bacteria we are currently targeting are predominant pathogens in both of these indications.

TABLE OF CONTENTS

AmpliPhage-004: Gastrointestinal (GI) Infection Caused by *C. difficile* Infection (CDI)

From 2000 through 2007, deaths in the United States from *C. difficile* infection increased over 400%. Over 90% of such deaths occur in hospitalized or confined patients over the age of 65. Global Data estimates that the major European Union and United States markets for CDI therapies grew to more than \$314 million in 2011 and they are expected to grow to more than \$500 million by 2019.

According to the CDC, almost 250,000 people each year require hospitalization for *C. difficile* infections, and at least 14,000 people die each year in the United States from *C. difficile* infections. From 2000 through 2007, deaths in the United States from *C. difficile* infections increased over 400%. We are actively working with researchers at the University of Leicester and the University of Glasgow to develop a phage therapy that targets and kills all toxin types of *C. difficile*. We believe that orally delivered phages are well suited to treat CDI. Within this collaboration, researchers at the University of Leicester have discovered phages that have been shown to be effective against clinically-relevant strains of *C. difficile* isolated from around the world. Since current therapies against *C. difficile* are considered less than optimal, we believe that there is a significant market opportunity for our product in treating this disease.

Prior Clinical Development

In 2010, the Company's wholly owned subsidiary, Biocontrol, reported a double-blind placebo-controlled, randomized Phase 1/2 clinical trial targeting chronic ear infections (otitis) caused by antibiotic-resistant *P. aeruginosa*. This was the first, and to date, we believe the only, regulated efficacy trial of bacteriophage therapy in humans that has been reported. Positive results were reported demonstrating decreasing levels of *P. aeruginosa* in the ear and improvement of clinical condition with a single input dose of 2.4 nanograms of bacteriophage preparation. While this was a small trial (n=24), changes from baseline at the end of the trial in the test group (n=12) were statistically significant for both clinical condition (p=0.001) and bacterial load (p=0.016). No significant changes were seen in the control group (n=12) compared to baseline at the end of the trial. Difference between test and control groups was statistically significant by analysis by covariance (ANCOVA) on day 21 for bacterial count (p=0.0365). These results will need to be validated in larger well-controlled trials.

Anti-Infective Therapeutics Market

The market opportunity for antibiotics is extremely large, with the market estimated to reach \$40.3 billion in annual sales globally in 2015.

Almost one in every five deaths worldwide occurs as a result of infection and, according to the World Health Organization, or WHO, many bacterial infections will become difficult or impossible to cure as the efficacy of current antibiotic drugs wanes. Despite the advances in antimicrobial and vaccine development, infectious diseases still remain as the third-leading cause of death in the United States and the second-leading cause of death worldwide.

The number of new antibiotics approved by the FDA and other global regulatory authorities has declined consistently over the last two decades. According to the Infectious Diseases Society of America, as of early 2013, only two new antibiotics have been approved by the FDA since 2009 and only seven new antibiotics targeting multi-drug-resistant Gram-negative bacilli were in either Phase 2 or Phase 3 trials. This dramatic decrease in productivity is evidenced by only two classes of antibiotics oxazolidinones and cyclic lipopeptides having been developed and launched in the last 30 years. At the same time, the evolution of antibiotic-resistant bacteria has led to an increasing number of infections for which there are no current treatments available.

Hospital-acquired (nosocomial) infections are a major healthcare problem throughout the world, affecting developed countries as well as resource-poor countries. The WHO reports that hospital-acquired infections are among the major causes of death and increased morbidity among hospitalized patients and estimates that more than 1.4 million people per year worldwide suffer from infectious complications from a hospital stay.

A recent CDC report also cites that in the United States, between 5 and 10% of all patients admitted to a hospital will be affected by a hospital-acquired infection during their stay, typically requiring extended stays and additional care.

There is also a significant risk of death from such infections. In the United States, the

TABLE OF CONTENTS

CDC estimates that approximately 99,000 people die from hospital-acquired infections each year. The Cystic Fibrosis Foundation estimates that *P. aeruginosa* accounts for 10% of all hospital-acquired infections.

Infections also occur in connection with Cystic Fibrosis (CF), which is a genetic disease affecting primarily Caucasians of northern European descent. According to the Cystic Fibrosis Foundation, there are approximately 50,000 cases of CF in North America and Europe. *P. aeruginosa* opportunistically infects the mucous membranes, primarily the lungs, of CF patients and quickly grows out of control, resulting in pneumonia. *P. aeruginosa* infections are notoriously resistant to known antibiotics, and treatment may be further complicated by the formation of biofilms. Biofilms are organized structures of microorganisms growing on solid surfaces (such as lung tissue) and often limit access of antibiotics to the covered tissues. Since phages attack bacteria in a manner independent of chemical antibiotic resistance mechanisms and can infect bacteria growing in biofilms, we believe that *P. aeruginosa* infection among CF patients represents a compelling indication to pursue. The availability of *Pseudomonas* specific phages along with validated animal models of *P. aeruginosa* lung infections has contributed to the development of our bacteriophage program in CF.

Compounding the above situations is the alarming and continuing rise in the prevalence of antibiotic-resistant bacterial infections. This, coupled with the lack of new antibiotics in current discovery and development pipelines, has generated a significant clinical management problem worldwide, leading to increases in morbidity and mortality due to these antibiotic-resistant bacteria as well as increases in healthcare costs.

The first of these antibiotic-resistant infections to reach epidemic proportions was caused by the Gram-positive bacterium *S. aureus*. *S. aureus* resistance to a broad range of antibiotics has necessitated the use of expensive and potentially toxic drugs of last resort, most notably vancomycin. Antibiotic-resistant forms of *S. aureus*, usually termed MRSA (methicillin-resistant *S. aureus*), VISA (vancomycin-intermediate *S. aureus*), or VRSA (vancomycin-resistant *S. aureus*), can be extremely challenging to treat. Although several antibiotics targeting *S. aureus* have been developed, rapidly developing bacterial resistance has been noted for all of these including linezolid, daptomycin and tigecycline. On the basis of historical evidence, resistance to these existing products is likely to increase over time, and this picture is further complicated by the reduced efficacy of conventional antibiotics against *Staphylococcus* biofilms.

Typically *S. aureus* infection causes a variety of suppurative (pus-forming) infections and toxinoses in humans. It causes superficial skin lesions such as boils, styes and furuncles; more serious infections such as pneumonia, mastitis, phlebitis, meningitis and urinary tract infections; and deep-seated infections, such as osteomyelitis and endocarditis. *S. aureus* is the leading cause of wound infections, in particular, hospital-acquired (nosocomial) infection of surgical wounds and infections associated with indwelling medical devices. *S. aureus* is the leading pathogen in healthcare-associated infections in the United States as a whole, accounting for 30.4% of surgical site infections (SSI), and 15.6% of such infections overall.

Anti-Infective Treatments with Bacteriophages

Background

The dramatic rise in antibiotic resistance, the appearance of an increasing number of new superbugs and the lack of new antibiotics in the pipeline has prompted calls to action from many of the world's major health bodies such as the CDC and the WHO, who warn of an antibiotic cliff and a post-antibiotic era. In 2009, the European Antimicrobial Resistance Surveillance System, or EARSS, concluded that the loss of effective antimicrobial therapy increasingly threaten[s] the delivery of crucial health services in hospitals and in the community. This conclusion was reinforced

by The Antimicrobial Availability Task Force, or AATF, of the Infectious Diseases Society of America, or IDSA, and the European Centre for Disease Prevention and Control, or ECDC, in conjunction with the European Medicine Agency, or EMA. Clearly, there is a pressing need to find alternative antibacterial therapies.

Bacteriophage therapy has the potential to be an alternative method of treating bacterial infection. Phages are ubiquitous environmental viruses that grow only within bacteria. The name bacteriophage translates as eaters of bacteria and reflects the fact that as they grow, phages kill the bacterial host by multiplying inside and then bursting through the cell membrane in order to release the next generation of phages. Phages can

TABLE OF CONTENTS

differ substantially in morphology and each phage is active against a specific range of a given bacterial species. Phages were first discovered in 1915 at the Institut Pasteur and were shown to kill bacteria taken from patients suffering from dysentery. Furthermore, it was noted that phage numbers rose as patients recovered from infection, suggesting a direct association.

Life Cycle of a Bacteriophage

Until the discovery of effective antibiotics, phages were used as an effective means of combating bacterial infection. When broad-spectrum antibiotics came into common use in the early 1940s, phages were considered unnecessary, with antibiotics being seen for many years as the answer to bacterial disease. This attitude persisted until the development of the wide-ranging, and in some cases total, resistance to antibiotics seen within the last 10 years.

It is now clear that bacteria can adapt to resist chemical antibiotics. In addition, there is now strong pressure to limit the use of antibiotics for human and veterinary use. There is a real need for different approaches to the control of antibiotic-resistant bacterial infections. In the light of current knowledge, it is apparent that early work with phages was hindered by poor understanding of the biology of phages, leading to exaggerated claims that damaged the reputation of phage therapy. Several companies in the 1920s and 1930s began to produce and market bacteriophage preparations. Unfortunately, these were often marketed with promises of efficacy against diseases that are now known to have nothing to do with bacteria, and many preparations themselves failed to actually contain bacteriophages. These conditions made bacteriophage subject to understandable skepticism. Now, with the far greater understanding of phages and their function that is now available, it is possible to identify the bacteria that are causing disease and then target them with highly specific phages that will kill only those bacteria.

Phages have the potential to provide both an alternative to, and a synergistic approach with, antibiotic therapy. Since they use entirely different mechanisms of action, phages are unaffected by resistance to conventional antibiotics. Phage containing certain enzymes also have the ability to disrupt bacterial biofilms, thus potentiating the effect of chemical antibiotics when used in combination with them.

In fact, the ability to isolate and develop phages for any of a broad range of bacterial targets, combined with their ability to disrupt bacterial biofilms, suggests strong potential for this approach in the control of bacterial infections. Published literature indicates that phages have the potential to be used as topical agents for the control of bacterial infection, and that such use is compatible with the approaches that have been shown to be effective in the treatment of wound injuries.

Bacteriophage therapy for the treatment of bacterial infections has been in constant use since 1917. Most of the research on phage-based therapy was conducted in the former Soviet Union prior to and immediately after World War II. While the West primarily focused resources into the development of chemical antibiotics, physicians and researchers in the Soviet Union were mass-producing phages and demonstrating their efficacy against a wide range of bacterial infections affecting the GI tract (dysentery), wounds (surgical and combat), skin (boils) and bone (osteomyelitis). While these studies are compelling, most lacked appropriate control group design or lacked control groups completely. Furthermore, the standard of care has changed substantially during the ensuing decades since those studies were performed, making claims of improved cure rates open for debate.

Despite numerous encouraging case studies, bacteriophage treatment was never adopted by Western medicine due to a lack of robust scientific evidence generated through systematically planned, controlled and

TABLE OF CONTENTS

regulated clinical trials. Recently, however, an increasing number of papers, reviews and books appearing on bacteriophage therapy indicate an increasing appetite among the scientific community and healthcare industry for developing bacteriophage therapy as part of mainstream medicine. Current biomedical technology is vastly superior to that available during the early days of bacteriophage therapy and our understanding of phage biology and the mechanisms of phage-bacterial host interaction have improved, along with advances in knowledge concerning bacterial infection. Although our knowledge of the biology, genetics and bactericidal efficacy of bacteriophages *in vitro* is impressive, less is known about their pharmacokinetic behavior *in vivo*, in particular in human subjects. To date very few human clinical trials have been conducted to modern standards in either the United States or Europe. In 2009, a U.S. Phase 1 clinical trial carried out at the Southwestern Regional Wound Care Center in venous ulcers using a mixture or cocktail of phages which individually attack different species of bacteria (*S. aureus*, *P. aeruginosa* and *E. coli*) was reported. The results of this trial showed this multi-bacteriophage preparation to be safe in trial subjects.

These trials, alongside published reports of less well-conducted studies, suggest that phage therapy shows promise for treating infectious diseases caused by antibiotic-resistant bacteria. One, conducted by the Polish Academy of Sciences, started in 2005 and is treating a broad range of infections and clinical conditions associated with antibiotic-refractory infections. This work derives from a phage therapy clinic that has operated at this location. A second is the European Union-sponsored Phagoburn Phase 1/2 clinical trial, which is being conducted at multiple centers in France, Belgium and Switzerland. The project has been under way since June 2013, using a large phage mix for treatment of burn wounds infected with *E. coli* and *P. aeruginosa*.

Our Strategy

Our strategy is to use techniques of modern biotechnology and current state-of-the-art practices for drug development in concert with existing regulatory guidance to develop a pipeline of bacteriophage products that will destroy bacterial pathogens such as MRSA, which are resistant to chemical antibiotics. Our business strategy will apply state-of-the-art techniques in molecular biology and in clinical trial design to build upon the long successful history of using phages therapeutically to treat and cure infections.

In collaboration with the U.S. Army, we plan to initiate a clinical trial in 2015 that will support the development of a treatment for *S. aureus* (MRSA) infections for wound and skin infections. Additionally, subject to the availability of adequate financing, we expect to continue product selection and formulation work for AmpliPhage-001, and following final product selection, in conjunction with leading Centers of Excellence in the UK, we would expect to conduct a Phase 1/2 study using AmpliPhage-001 to treat CF patients with *P. aeruginosa* lung infections. Through our collaboration agreement with the University of Leicester, we are also continuing to develop AmpliPhage-004 to treat patients suffering from serious gastrointestinal infections caused by *C. difficile*.

Recent Acquisitions

In January 2011, we completed the acquisition of Biocontrol, with the goal of developing their phage therapy programs using funding from the sale of our legacy gene therapy assets. Under the terms of our acquisition of Biocontrol, we issued 22,817,198 shares of our common stock to the shareholders of Biocontrol with a total fair value of approximately \$8.6 million as of January 6, 2011, resulting in Biocontrol's former shareholders owning approximately 50% of our outstanding equity securities at the time. As a condition to closing the acquisition, Biocontrol raised approximately £200,000 (US\$310,000) in working capital for use by us.

In November 2012, we acquired SPH, pursuant to our offer to acquire all outstanding shares of SPH from its shareholders under the terms of a Shareholder Sale Agreement and a Managers Warranty Deed, collectively referred

to as the SPH Agreements, in exchange for up to 40,000,000 shares of our common stock. 20,000,000 of those shares were issued directly to the selling stockholders of SPH upon the closing of the acquisition, and the remaining 20,000,000 shares were issued and held in escrow. Of the escrow shares, 8,000,000 shares, referred to as Claims Shares, were subject to claims by us for breaches of representations by the selling stockholders of certain individual representations and certain additional representations made with respect to SPH itself and its operations by Dr. Anthony Smithyman and Mrs. Margaret Smithyman, the two largest shareholders of SPH, referred to as the Managers. The Claims Shares were released from escrow in November

TABLE OF CONTENTS

2013, 12 months following the closing of the acquisition. The remaining 12,000,000 shares were released from escrow in November 2014 following the Board's determination, based on the review of an independent committee of the Board of Directors, that the release of such shares was appropriate under the terms of the applicable agreement.

In connection with our acquisition of SPH, we entered into certain other arrangements, including the repayment under a Loan Repayment Deed (as amended) of a \$770,000 loan originally made by Cellabs Pty Ltd, or Cellabs, an Australian company affiliated with Dr. Smithyman, to SPH, a consulting agreement with Dr. Smithyman and the payment of \$3,017 per month to Cellabs for our laboratory space in Australia. Under the terms of the Loan Repayment Deed, the loan from Cellabs to SPH was to be repaid and fully satisfied partly in cash and partly by issuing 2,000,000 shares of our common stock to Cellabs. As of December 31, 2013, \$350,000 has been paid by us to Cellabs and all 2,000,000 shares have been issued. We paid the remaining balance of \$200,000 under the terms of the Loan Repayment Deed in December 2013. The SPH acquisition also included several phage therapy projects which had reached the pre-clinical or animal study stage, including the Brompton Hospital CF study, the Adelaide University MRSA chronic rhinosinusitis study and the University of Leicester *C. difficile* project. We believe that acquisition of SPH brings substantial phage scientific expertise and know-how to the Company sufficient to develop, manufacture and commercialize phage-based therapeutics. Under the terms of the consulting agreement with Dr. Smithyman, we were obligated to pay a fee of \$10,000 per month to Dr. Smithyman, who provided management consulting services as an independent contractor for an initial term of 12 months ending October 2013. Between the acquisitions of Biocontrol and SPH, we believe that we are the leading therapeutically focused phage company in the world.

Strategic Alliances and Research Agreements

As discussed below, we have established collaborations with Intrexon, the U.S. Army and the University of Leicester, which provide us with access to the considerable scientific, developmental, and regulatory capabilities of our collaborators. We believe that our collaborations contribute to our ability to rapidly advance our product candidates, build our product platform and concurrently progress a wide range of discovery and development programs.

Exclusive Channel Collaboration with Intrexon

On March 29, 2013, we entered into the ECC with Intrexon that governs a collaboration arrangement in which AmpliPhi uses Intrexon's technologies directed towards the research, development and commercialization of new bacteriophage-based therapies to target specific antibiotic-resistant infections. We believe that combining the broadest and most advanced synthetic biology platform with our world-leading phage capabilities will lead to the development of innovative second-generation phage products. The ECC establishes committees comprised of representatives of the Company and Intrexon that govern activities related to the bacteriophage programs in the areas of project establishment and prioritization, as well as budgets and their approval, chemistry, manufacturing and controls, clinical and regulatory matters, commercialization efforts and intellectual property.

Intrexon is a publicly held biotechnology company focused on the industrial engineering of synthetic biology. According to Intrexon, their advanced bioindustrial engineering platform enables Better DNA™ technology by combining DNA control systems with corresponding advancements in modular transgene design, assembly and optimization to enable unprecedented control over the function and output of living cells.

Under the terms of the ECC, the Company will receive an exclusive, worldwide license to utilize Intrexon's proprietary technology and expertise for the standardized design and production of genetically modified bacteriophages, which we refer to collectively as the Bacteriophage Program. The ECC seeks to develop bacteriophage-containing human therapeutics for use in the treatment of bacterial infections associated with acute and chronic wounds, the treatment of

acute and chronic *P. aeruginosa* lung infections and the treatment of infections of *C. difficile*, which we collectively refer to as AmpliPhi Products. The ECC grants the Company a worldwide license to use patents and other intellectual property of Intrexon in connection with the research, development, use, importing, manufacture, sale and offer for sale of AmpliPhi Products. Such license is exclusive with respect to any clinical development, selling, offering for sale or other

TABLE OF CONTENTS

commercialization of AmpliPhi Products, and otherwise is non-exclusive. Subject to limited exceptions, we may not sublicense the rights to Intrexon's technology without Intrexon's written consent.

Under the ECC, and subject to certain exceptions, we are responsible for, among other things, the performance of the Bacteriophage Program, including development, commercialization and certain aspects of manufacturing AmpliPhi Products. Intrexon is responsible for the costs of establishing manufacturing capabilities and facilities, subject to certain exceptions, for the bulk manufacture of products developed under the Bacteriophage Program, certain other aspects of manufacturing and costs of basic-stage research with respect to Intrexon Channel Technology and Intrexon materials, i.e., platform improvements and costs of filing, prosecution and maintenance of Intrexon's patents.

Subject to certain expense allocations and other offsets provided in the ECC, AmpliPhi has agreed to pay Intrexon on a quarterly basis tiered royalties on net sales derived in that quarter from the sale of AmpliPhi Products, which are based on or incorporate Intrexon's technology, calculated on a product-by-product basis. If AmpliPhi sublicenses a product developed under the collaboration with Intrexon, AmpliPhi has likewise agreed to pay Intrexon on a quarterly basis a certain percentage of revenues received from the sublicensee. Pursuant to the ECC, Intrexon received 24,000,000 shares of our common stock as an upfront technology access fee. We may also pay Intrexon up to \$7.5 million in aggregate milestone payments for each product, payable either in cash or equity upon the achievement of certain events. Intrexon is also entitled to tiered royalties as a percentage in the upper-single digits of the net product sales of a product developed under the ECC.

The ECC is effective until terminated by either Intrexon or AmpliPhi. Intrexon may terminate the ECC if AmpliPhi fails to use diligent efforts to develop and commercialize AmpliPhi Products or if AmpliPhi elects not to pursue the development of an AmpliPhi Program identified by Intrexon that is a Superior Therapy as defined in the ECC. AmpliPhi has the right to terminate the ECC upon 90 days' written notice to Intrexon at any time.

Upon termination of the ECC, AmpliPhi may continue to develop and commercialize any AmpliPhi Product that, at the time of termination:

is being commercialized by the Company;
has received regulatory approval;

is a subject of an application for regulatory approval that is pending before the applicable regulatory authority; or
is the subject of an ongoing Phase 2 or completed Phase 3 clinical trial in the field.

AmpliPhi's obligation to pay royalties described above with respect to these retained products will survive termination of the ECC.

Global R&D Agreement with U.S. Army

In June 2013, we entered a CRADA with the USAMRMC and the WRAIR. The CRADA will focus on developing bacteriophage therapeutics to treat at least three types of infections: *S. aureus*, *E. coli* and *P. aeruginosa*. The increasing prevalence of antibiotic-resistant bacteria poses a serious threat to public health and military personnel and is a major problem in hospitals and clinics around the world. The initial indication will be wounds and skin infections from *S. aureus*, which is the leading pathogen in healthcare-associated infections in the United States as a whole, accounting for 30.4% of surgical site infections.

In connection with our CRADA with the U.S. Army, we submitted a Pre-IND briefing package to the FDA to obtain their feedback on our Chemistry, Manufacturing and Controls (CMC) program and plans for our first human study with our lead product, AmpliPhage-002 (*S. aureus*). The FDA endorsed our plan for progressing bacteriophage

therapy to the clinic, specifically agreeing to our platform's manufacturing process, product specifications and the absence of any need of non-clinical toxicology to initiate our first Phase 1 study.

We plan to conduct our Phase 1 study at the WRAIR and to conduct further clinical trials at various sites throughout the world. We plan to initiate a clinical trial in 2015 in collaboration with the U.S. Army that will support the development of a treatment for *S. Aureus* infections for wound and skin infections.

TABLE OF CONTENTS

We will retain global regulatory ownership and commercial rights to all products developed by us under the agreement. USAMRMC will gain access rights to any products developed. We also have the rights to exclusively license any intellectual property developed by USAMRMC under the collaboration on terms to be agreed upon.

The CRADA expires in June 2018 and can be terminated by either USAMRMC or AmpliPhi upon 60 days' written notice to the other party at any time.

University of Leicester Development Agreements

On April 24, 2013, we entered into the April Collaboration Agreement and on September 5, 2013, we entered into the Leicester License Agreement with the University of Leicester to develop a phage therapy that targets and kills all toxin types of *C. difficile*. We also entered into the August Collaboration Agreement with the University of Leicester and the University of Glasgow, whereby the University of Glasgow will carry out certain animal model development work. These agreements were extended in November 2014.

Under these agreements, which we refer to collectively as the Leicester Development Agreements, we are funding the University of Leicester to carry out *in vitro* and the University of Glasgow to carry out animal model development work on the University of Leicester's development of a bacteriophage therapeutic to resolve *C. difficile* infections and we are licensing related patents, materials and know-how from the University of Leicester. Under the Leicester Development Agreements, the University of Leicester will provide the bacteriophage and act as overall project coordinator for the development work. All rights, title and interest to any intellectual property developed under the Leicester Development Agreements belong to us. Under the Leicester License Agreement, we have exclusive rights to certain background intellectual property of the University of Leicester, for which we will pay the University of Leicester royalties based on product sales and make certain milestone payments based on product development.

The April Collaboration Agreement expires on November 12, 2015 and is terminable by either party upon (a) material breach by the other party, subject to a 90-day cure period, (b) the inability of the principal investigator to continue the collaboration or (c) our bankruptcy or winding up of our operations.

The August Collaboration Agreement expires on January 22, 2015 and is terminable under the same conditions as the April Collaboration Agreement.

The license agreement expires on the later of the expiration of the licensed patents or September 5, 2028, and is terminable by us at any time upon 60 days' notice, by the University of Leicester (a) if we legally challenge the validity or ownership of any of the licensed patents, (b) if we fail to pay the fees, milestones or royalties due under the license agreement or (c) if we fail to make substantial commercial process and agree with Leicester that we will be unable to do so. The license agreement is also terminable by either party upon the material breach by the other party (subject to a 30-day cure period) or upon the other party's bankruptcy or insolvency.

In October 2014, we entered into a collaboration agreement, effective as of November 9, 2014, with the University of Leicester to develop phage therapies targeting *C. difficile*.

Legacy Programs

Sale of Assets to Celladon Corporation

On June 27, 2012, we entered into an asset purchase agreement and amended and restated license agreement, or license agreement, with Celladon Corporation, or Celladon, where we sold and transferred all of our rights and interest in our gene therapy business, subject to certain limitations relating to rights contained in our license agreements with the University of Pennsylvania and Genzyme Corporation. Pursuant to our license agreement with the University of Pennsylvania, or UPenn, we may be obligated to make certain royalty and license payments to UPenn as a result of Celladon's (or its affiliate's or licensee's) use of certain technology licensed under our license agreement with Celladon.

Pursuant to the license agreement with Celladon, Celladon has agreed to comply with certain terms of the UPenn license agreement and to reimburse us for any payments that come due under the UPenn license agreement. Pursuant to the license agreement, we may receive a long-term royalty of 1.75% on certain product sales. This royalty may be completely canceled

TABLE OF CONTENTS

at any time by making a one-time payment to us in the amount of \$1.75 million. In May 2013, we received a royalty payment from Celladon in the amount of \$0.3 million. Celladon's obligation to pay us these royalties continues until the earlier of Celladon's termination of the agreement (which it may elect to do at any time upon thirty days' notice to us) or expiration of the patents related to the licensed technology.

Under the terms of the Celladon asset sale and license agreement, we retained certain liabilities, including obligations to indemnify against charges of infringement of certain intellectual property pursuant to our asset purchase agreement with Genzyme Corporation, our license agreement with Amsterdam Molecular Therapeutics B.V. and our collaboration and license agreement dated January 1, 2005 with the International AIDS Vaccine Initiative, the Children's Research Institute and the Children's Hospital of Philadelphia.

Intellectual Property

General

Our goal is to obtain, maintain and enforce patent protection for our product candidates, formulations, processes, methods and any other proprietary technologies, preserve our trade secrets and operate without infringing on the proprietary rights of other parties, both in the United States and in other countries. Our policy is to actively seek to obtain, where appropriate, the broadest intellectual property protection possible for our current product candidates and any future product candidates, proprietary information and proprietary technology through a combination of contractual arrangements and patents, both in the United States and abroad. However, patent protection may not afford us with complete protection against competitors who seek to circumvent our patents.

We also depend upon the skills, knowledge, experience and know-how of our management and research and development personnel, as well as that of our advisors, consultants and other contractors. To help protect our proprietary know-how, which is not patentable, and for inventions for which patents may be difficult to enforce, we currently and will in the future rely on trade secret protection and confidentiality agreements to protect our interests. To this end, we require all of our employees, consultants, advisors and other contractors to enter into confidentiality agreements that prohibit the disclosure of confidential information and, where applicable, require disclosure and assignment to us of the ideas, developments, discoveries and inventions important to our business.

We hold or have exclusive license rights to five U.S. and foreign patents, expiring on various dates between 2024 and 2029. These patents relate to the therapeutic uses of bacteriophages, bacteriophage compositions, the sequential use of bacteriophages in combination with conventional antibiotics, genetic sequence variations, biofilm disrupting agents and methods to reduce antibiotic resistance, methods to design therapeutic combination panels of bacteriophage.

US 7758856 and national patents within the EU deriving from PCT WO2004062677; Bacteriophage for the treatment of bacterial biofilms

Under an existing license from the United Kingdom Secretary of State for the Department of Health (DoH), we have exclusive rights to develop and exploit technologies relating to the use of bacteriophages combined with biofilm-disrupting agents in treating biofilm infections. The patent specifies agents able to facilitate the penetration of biofilms, and their combination with therapeutic bacteriophage preparations. The priority date for these patents is January 10, 2003 and the date of U.S. grant is July 20, 2010. The date of expiry is December 5, 2026 in the United States (noting Patent Term Adjustment, PTA, by the United States Patent and Trademark Office, or USPTO). The patent is also granted in the European Union (France, Germany, Netherlands, Switzerland/Liechtenstein and the

United Kingdom). The date of expiration is January 12, 2024 in the European Union. Pursuant to this license agreement, we may be required to pay the United Kingdom DoH aggregate milestone payments of up to £10,000 per product and single-digit royalties. The agreement, which may be terminated by the DoH upon our default, continues until the earlier of such termination or the expiry of the DoH's rights in the licensed intellectual property.

US 7807149, US 8105579, US 8388946, continuation application and national filings deriving from PCT WO2005009451; Bacteriophage containing therapeutic agents

Through our wholly owned subsidiary, Biocontrol Ltd, we have three granted U.S. patents and a pending continuation application filed. The granted patents relate to therapeutic, sequential use of bacteriophages in

TABLE OF CONTENTS

combination with conventional antibiotics, to bacteriophage compositions, and to the uses of bacteriophages. The filed continuation application relates to genetic sequence variation around the protected agents. The priority dates for these patents are July 23, 2003. Dates of U.S. grant are October 5, 2010, January 31, 2012 and March 5, 2013. The dates of expiry for the granted patents are March 18, 2027 (noting PTA by the USPTO) and July 23, 2024 in the United States. The national application in Australia was granted as AU 2004258731 on June 10, 2010, with July 23, 2024 as the date of expiry. Examination in other jurisdictions is proceeding: for example, in the EU, claims for bacteriophage compositions are approaching allowance; and a divisional application has been submitted for therapy claims although there is no assurance that claims or applications will ultimately be granted.

US 8475787, continuation application and national filings deriving from PCT WO2008110840; Beneficial effects of bacteriophage treatment

Through our wholly owned subsidiary, Biocontrol Ltd, we have one granted U.S. patent, and a pending continuation application filed. The granted patent relates to bacteriophage-induced induction of antibiotic sensitivity for *P. aeruginosa*. The priority date for these patents is March 9, 2007. The date of U.S. grant is July 2, 2013 and the date of expiry for the granted patent is March 21, 2029 (noting PTA by the USPTO). The continuation application has been filed relating to other bacterial species. The national application in Australia was granted as AU 2008224651 on December 19, 2013, with March 7, 2028 as the date of expiry. National applications are under examination in other jurisdictions.

PCT WO2013/16464 (United Kingdom priority filing 1207910.9); Therapeutic bacteriophage compositions

Through our wholly owned subsidiary, Biocontrol Ltd, we have a PCT application relating to the design of effective combinations of bacteriophages. The priority date for this application is May 4, 2012. The PCT application published on November 7, 2013.

Our success in preserving market exclusivity for our product candidates relies on patent protection, including extensions to this where appropriate, and on data exclusivity relating to an approved biologic. This may be extended by orphan drug and/or pediatric use protection where appropriate. Once any regulatory period of data exclusivity expires, depending on the status of our patent coverage, we may not be able to prevent others from marketing and selling biosimilar versions of our product candidates. We are also dependent upon the diligence of our appointed agents in national jurisdictions, acting for and on behalf of the Company, which manage the prosecution of pending domestic and foreign patent applications and maintain granted domestic and foreign patents.

Competition

We operate in highly competitive segments of the biotechnology and biopharmaceutical markets. We face competition from many different sources, including commercial pharmaceutical and biotechnology enterprises, academic institutions, government agencies and private and public research institutions all seeking to develop novel treatment modalities for bacterial disease. Many of our competitors have significantly greater financial, product development, manufacturing and marketing resources than we do. Large pharmaceutical companies have extensive experience in clinical testing and obtaining regulatory approval for drugs. In addition, many universities and private and public research institutes are active in antibacterial research, some in direct competition with us. We also may compete with these organizations to recruit scientists and clinical development personnel. Smaller or early-stage companies may also prove to be significant competitors, particularly through collaborative arrangements with large and established

companies.

Manufacturing and Supply

The manufacturing process for our bacteriophage product is currently under development. We are optimizing a manufacturing platform that will allow us to prepare therapeutic phages to cGMP regulations, in a cost-effective manner. We have developed our own manufacturing capabilities at a wholly owned facility in Ljubljana, Slovenia. Our facility must comply with applicable cGMP regulations, which require, among other things, quality control and quality assurance as well as the corresponding maintenance of records and documentation. Pharmaceutical product manufacturers and other entities involved in the manufacture and

18

TABLE OF CONTENTS

distribution of approved pharmaceutical products are required to register their establishments with the FDA, and certain state agencies, including the applicable government agency where the facility is located, and are subject to periodic unannounced inspections by the FDA and certain state agencies for compliance with cGMP and other laws.

Our facility in Ljubljana Slovenia is subject to inspection and regulation by JAZMP, the Slovenian agency that regulates and supervises pharmaceutical products in Slovenia. As a result of an initial inspection, we are taking certain non-critical corrective actions regarding the manufacture of AmpliPhage-002, which we believe will lead to certification by JAZMP to manufacture AmpliPhage-002; however, there can be no assurance that we will receive such certification. Accordingly, we must continue to expend time, money and effort in the areas of production and quality control to maintain cGMP compliance. Discovery of problems with a product after approval may result in restrictions on a product, manufacturer or holder of an approved NDA/Biologics License Application, or BLA, including withdrawal of the product from the market. In addition, changes to the manufacturing process generally require prior regulatory approval before being implemented and other types of changes to the approved product, such as adding new indications and additional labeling claims, are also subject to further regulatory review and approval, including approval by the FDA.

Commercialization and Marketing

We have full worldwide commercial rights to all of our phage-based products to treat drug-resistant bacterial infections, including our lead programs: AmpliPhage-001 for the treatment of CF patients with *P. aeruginosa* lung infections; AmpliPhage-002, for the treatment of antibiotic-resistant *S. aureus* (MRSA) infections; and AmpliPhage-004 for the treatment of *C. difficile* infections. We believe we can maximize the value of our company by retaining substantial global commercialization rights to these product candidates and, where appropriate, entering into partnerships to develop and commercialize our other product candidates. We plan to build a successful commercial enterprise using a sales team in the United States and possibly other major markets and with partners in other territories.

We have not yet established a sales, marketing or product distribution infrastructure because our lead candidates are still in early clinical development. We generally expect to retain commercialization and co-commercialization rights in the United States for all of our product candidates for which we receive marketing approvals. Subject to receiving marketing approvals, we intend to explore building the necessary marketing and sales infrastructure to market and sell our current product candidates. We also intend to explore the use of a variety of distribution agreements and commercial partnerships in those territories where we do not establish a sales force for any of our product candidates that obtain marketing approval.

Government Regulation and Product Approval

Government authorities in the United States, at the federal, state and local level, and other countries extensively regulate, among other things, the research, development, testing, manufacture, quality control, approval, labeling, packaging, storage, record-keeping, promotion, advertising, distribution, post-approval monitoring and reporting, marketing and export and import of products such as those we are developing.

United States Product Development Process

In the United States, the FDA regulates biological products under the Federal Food, Drug and Cosmetic Act, or FDCA, and the Public Health Service Act, or the PHS Act, and related regulations. Biological products are also subject to other federal, state and local statutes and regulations. The process of obtaining regulatory approvals and the

subsequent compliance with appropriate federal, state, local and foreign statutes and regulations require the expenditure of substantial time and financial resources. Failure to comply with the applicable United States requirements at any time during the product development process or approval process, or after approval, may subject an applicant to administrative or judicial sanctions. FDA sanctions could include refusal to approve pending applications, withdrawal of an approval, a clinical hold, warning letters, product recalls, product seizures, total or partial suspension of production or distribution injunctions, fines, refusals of government contracts, restitution, disgorgement or civil or criminal penalties. Any agency or judicial enforcement action could have a material adverse effect on us. The process required by the FDA before a biological product may be marketed in the United States generally includes the following:

completion of preclinical laboratory tests, animal studies and formulation studies according to good laboratory practice requirements, or GLP, or other applicable regulations;

19

TABLE OF CONTENTS

submission to the FDA of an IND, which must become effective before human clinical trials may begin in the United States;

performance of adequate and well-controlled human clinical trials according to the FDA's regulations commonly referred to as good clinical practices, or GCPs, and any additional requirements for the protection of human research subjects and their health information, to establish the safety and efficacy of the proposed biological product for its intended use or uses;

submission to the FDA of a Biologics License Application (BLA) for a new biological product;

satisfactory completion of an FDA inspection of the manufacturing facility or facilities where the biological product is produced to assess compliance with the FDA's cGMP regulations, to assure that the facilities, methods and controls are adequate to preserve the biological product's identity, strength, quality and purity;

potential FDA audit of the nonclinical study sites and clinical trial sites that generated the data in support of the BLA; and

FDA review and approval, or licensure, of the BLA which must occur before a biological product can be marketed or sold.

The lengthy process of seeking required approvals and the continuing need for compliance with applicable statutes and regulations require the expenditure of substantial resources even when approvals are inherently uncertain.

The strategies, nature, and technologies of bacteriophage products are different from the conventional antibiotic therapy products. From the regulatory requirements established to ensure the safety, efficacy and quality of bacteriophage preparations, there are several major points to consider during the development, manufacturing, characterization, preclinical study and clinical study of bacteriophage. The major issues include:

bacteriophage preparation design (single agent versus phage mixes and wild-type phage versus genetically engineered phage);

proof of concept in development of bacteriophage products;

selectivity of bacteriophage replication and targeting to specific species of bacteria;

relevant animal models in preclinical studies; and

clinical safety.

Before testing any compounds with potential therapeutic value in humans, the biological product candidate enters the preclinical testing stage. Preclinical tests include laboratory evaluations of product biology, toxicity and formulation, as well as animal studies to assess the potential safety and activity of the biological product candidate. The conduct of the preclinical tests must comply with federal regulations and requirements including GLP. The sponsor must submit the results of the preclinical tests, together with manufacturing information, analytical data, any available clinical data or literature and a proposed clinical protocol, to the FDA as part of the IND application. The IND automatically becomes effective 30 days after receipt by the FDA, unless the FDA places the IND on a clinical hold within that 30-day time period. In such a case, the IND sponsor and the FDA must resolve any outstanding concerns before the clinical trial can begin. The FDA may also impose clinical holds on a biological product candidate at any time before or during clinical trials due to safety concerns or non-compliance. Accordingly, we cannot be certain that submission of an IND will result in the FDA allowing clinical trials to begin, or that, once begun, issues will not arise that suspend or terminate such clinical trial.

Clinical trials involve the administration of the biological product candidate to healthy volunteers or patients under the supervision of qualified investigators, generally physicians not employed by the sponsor. Clinical trials are conducted under protocols detailing, among other things, the objectives of the clinical trial, dosing procedures, subject inclusion and exclusion criteria and the parameters to be used to monitor subject safety. Each protocol must be submitted to the FDA if conducted under an IND. Clinical trials must be

TABLE OF CONTENTS

conducted in accordance with GCP requirements. Further, each clinical trial must be reviewed and approved by an independent institutional review board, or IRB, or ethics committee if conducted outside of the U.S., at or servicing each institution at which the clinical trial will be conducted. An IRB or ethics committee is charged with protecting the welfare and rights of trial participants and considers such items as whether the risks to individuals participating in the clinical trials are minimized and are reasonable in relation to anticipated benefits. The IRB or ethics committee also approves the informed consent form that must be provided to each clinical trial subject or his or her legal representative and must monitor the clinical trial until completed. We intend to use third-party CROs to administer and conduct our planned clinical trials and will rely upon such CROs, as well as medical institutions, clinical investigators and consultants, to conduct our trials in accordance with our clinical protocols and to play a significant role in the subsequent collection and analysis of data from these trials. The failure by any of such third parties to meet expected timelines, adhere to our protocols or meet regulatory standards could adversely impact the subject product development program and we remain legally responsible for compliance with applicable laws and regulations governing the conduct of these clinical trials.

Human clinical trials are typically conducted in three sequential phases that may overlap or be combined:

Phase 1: The biological product is initially introduced into healthy human subjects and tested primarily for safety and dosage tolerance. Absorption, metabolism, distribution and excretion may also be tested.

Phase 2: The biological product is evaluated in a limited patient population to identify possible adverse effects and safety risks, to preliminarily evaluate the efficacy of the product for specific targeted diseases and to determine dosage tolerance, optimal dosage and dosing schedule.

Phase 3: Clinical trials are undertaken to further evaluate dosage, clinical efficacy and safety in an expanded patient population at geographically dispersed clinical trial sites. These clinical trials are intended to establish the overall risk/benefit ratio of the product and provide an adequate basis for product labeling. Generally, two adequate and well-controlled Phase 3 clinical trials are required by the FDA and other regulatory authorities for approval of a marketing application.

Post-approval studies, or Phase 4 clinical trials, may be requested by the FDA as a condition of approval and are conducted after initial marketing approval. These studies are used to gain additional experience from the treatment of patients in the intended therapeutic indication.

Progress reports detailing the results of the clinical trials must be submitted at least annually to the FDA and written IND safety reports must be submitted to the FDA and the investigators for serious and unexpected adverse events or any finding from tests in laboratory animals that suggests that there may be a significant risk for human subjects. The FDA or the sponsor or, if used, its data safety monitoring board may suspend a clinical trial at any time on various grounds, including a finding that the research subjects or patients are being exposed to an unacceptable health risk.

Similarly, an IRB or ethics committee can suspend or terminate approval of a clinical trial at its institution if the clinical trial is not being conducted in accordance with the IRB's or ethics committee's requirements or if the pharmaceutical product has been associated with unexpected serious harm to patients. Suspension of a clinical study due to safety risks attributed to the investigational product will result in termination of the study and possibly others that are underway.

Concurrent with clinical trials, companies usually complete additional animal studies and must also develop additional information about the physical characteristics of the biological product as well as finalize a process for manufacturing the product in commercial quantities in accordance with cGMP requirements. To help reduce the risk of the introduction of adventitious agents or other impurities with the use of biological products, the PHS Act emphasizes

the importance of manufacturing control for products whose attributes cannot be precisely defined. The manufacturing process must be capable of consistently producing quality batches of the product candidate and, among other things, the sponsor must develop methods for testing the identity, strength, quality, potency, and purity of the final biological product. Additionally, appropriate packaging must be selected and tested and stability studies must be conducted to demonstrate that the biological product candidate does not undergo unacceptable deterioration over its shelf life.

TABLE OF CONTENTS

United States Review and Approval Processes

In order to obtain approval to market a biological product in the United States, a BLA must be submitted to the FDA that provides data establishing to the FDA's satisfaction the safety and effectiveness of the investigational biological product for the proposed indication. The application includes all data available from nonclinical studies and clinical trials, including negative or ambiguous results as well as positive findings, together with detailed information relating to the product's manufacture and composition, and proposed labeling, among other things. The testing and approval processes require substantial time and effort and there can be no assurance that the FDA will accept the BLA for filing and, even if filed, that any approval will be granted on a timely basis, if at all.

Under the Prescription Drug User Fee Act, or PDUFA, as amended, each BLA must be accompanied by a user fee. The FDA adjusts the PDUFA user fees on an annual basis. According to the FDA's fee schedule, effective through September 30, 2014, the user fee for an application requiring clinical data, such that the biological product candidate does not undergo unacceptable deterioration over its shelf life as a BLA, is \$2,169,100. PDUFA also imposes an annual product fee for biologics (\$104,060), and an annual establishment fee (\$554,600) on facilities used to manufacture prescription biologics. Fee waivers or reductions are available in certain circumstances, including a waiver of the application fee for the first application filed by a small business. Additionally, no user fees are assessed on BLAs for products designated as orphan drugs, unless the product also includes a non-orphan indication.

The FDA has 60 days from its receipt of a BLA to determine whether the application will be accepted for filing based on the agency's threshold determination that the application is sufficiently complete to permit substantive review. The FDA may refuse to file any BLA that it deems incomplete or not properly reviewable at the time of submission and may request additional information. In this event, the BLA must be resubmitted with the additional information. The resubmitted application also is subject to review before the FDA accepts it for filing. After the BLA submission is accepted for filing, the FDA reviews the BLA to determine, among other things, whether the proposed product is safe and effective for its intended use, has an acceptable purity profile, and whether the product is being manufactured in accordance with GMP regulations to assure and preserve the product's identity, safety, strength, quality, potency, and purity. The FDA may refer applications for novel biological products or biological products that present difficult questions of safety or efficacy to an advisory committee, typically a panel that includes clinicians and other experts, for review, evaluation and a recommendation as to whether the application should be approved and, if so, under what conditions. The FDA is not bound by the recommendations of an advisory committee, but it considers such recommendations carefully when making decisions. The FDA may ultimately decide that the NDA/BLA does not satisfy the criteria for approval. If a product receives regulatory approval, the approval may be significantly limited to specific diseases and dosages or the indications for use may otherwise be limited, which could restrict the commercial value of the product. Further, the FDA may require that certain contraindications, warnings or precautions be included in the product labeling.

Special FDA Expedited Review and Approval Programs

The FDA has various programs, including fast track designation, accelerated approval and priority review, that are intended to expedite the process for the development and FDA review of drugs that are intended for the treatment of serious or life threatening diseases or conditions and demonstrate the potential to address unmet medical needs. The purpose of these programs is to provide important new drugs and biological products to patients earlier than under standard FDA review procedures.

To be eligible for a fast track designation, the FDA must determine, based on the request of a sponsor, that a product is intended to treat a serious or life threatening disease or condition and demonstrates the potential to address an unmet

medical need, or if the drug or biological product qualifies as a qualified infectious disease product under the recently enacted Generating Antibiotic Incentives Now, or GAIN Act. The FDA will determine that a product will fill an unmet medical need if it will provide a therapy where none exists or provide a therapy that may be potentially superior to existing therapy based on efficacy or safety factors. We intend to request fast track designation for our product candidates if applicable.

Specifically, new drugs and biological products are eligible for Fast Track designation if they are intended to treat a serious or life-threatening condition and demonstrate the potential to address unmet medical

TABLE OF CONTENTS

needs for the condition. Fast Track designation applies to the combination of the product and the specific indication for which it is being studied. The sponsor of a new drug or biological may request the FDA to designate the drug or biologic as a Fast Track product at any time during the clinical development of the product. Unique to a Fast Track product, the FDA may consider for review sections of the marketing application on a rolling basis before the complete application is submitted, if the sponsor provides a schedule for the submission of the sections of the application, the FDA agrees to accept sections of the application and determines that the schedule is acceptable, and the sponsor pays any required user fees upon submission of the first section of the application.

Any product submitted to the FDA for marketing, including under a Fast Track program, may be eligible for other types of FDA programs intended to expedite development and review, such as priority review and accelerated approval. Any product is eligible for priority review if it has the potential to provide safe and effective therapy where no satisfactory alternative therapy exists or a significant improvement in the treatment, diagnosis or prevention of a disease compared to marketed products. The FDA will attempt to direct additional resources to the evaluation of an application for a new drug or biological product designated for priority review in an effort to facilitate the review. Additionally, a product may be eligible for accelerated approval. Drug or biological products studied for their safety and effectiveness in treating serious or life-threatening illnesses and that provide meaningful therapeutic benefit over existing treatments may receive accelerated approval, which means that they may be approved on the basis of adequate and well-controlled clinical studies establishing that the product has an effect on a surrogate endpoint that is reasonably likely to predict a clinical benefit, or on the basis of an effect on a clinical endpoint other than survival or irreversible morbidity or mortality, that is reasonably likely to predict an effect on irreversible morbidity or mortality or other clinical benefit, taking into account the severity, rarity or prevalence of the condition and the availability or lack of alternative treatments.

As a condition of approval, the FDA may require a sponsor of a drug or biological product receiving accelerated approval perform post-marketing studies to verify and describe the predicted effect on irreversible morbidity or mortality or other clinical endpoint, and the drug or biological product may be subject to accelerated withdrawal procedures. In addition, the FDA currently requires as a condition for accelerated approval pre-approval of promotional materials, which could adversely impact the timing of the commercial launch of the product. Fast Track designation, priority review and accelerated approval do not change the standards for approval but may expedite the development or approval process.

Moreover, under the provisions of the new Food and Drug Administration Safety and Innovation Act, or FDASIA, enacted in 2012, a sponsor can request designation of a product candidate as a breakthrough therapy. A breakthrough therapy is defined as a drug or biological product that is intended, alone or in combination with one or more other drugs or biological products, to treat a serious or life-threatening disease or condition, and preliminary clinical evidence indicates that the biological product or drug may demonstrate substantial improvement over existing therapies on one or more clinically significant endpoints, such as substantial treatment effects observed early in clinical development. Drugs or biological products designated as breakthrough therapies are also eligible for accelerated approval. The FDA must take certain actions, such as holding timely meetings and providing advice, intended to expedite the development and review of an application for approval of a breakthrough therapy. We intend to request breakthrough therapy designation for our product candidates if applicable.

Even if a product qualifies for one or more of these programs, the FDA may later decide that the product no longer meets the conditions for qualification or decide that the time period for FDA review or approval will not be shortened.

Drug Price Competition and Patent Term Restoration Act of 1984

Under the Drug Price Competition and Patent Term Restoration Act of 1984, known as the Hatch-Waxman Amendments, a portion of a product's patent term that was lost during clinical development and application review by the FDA may be restored. The Hatch-Waxman Amendments also provide for a statutory protection, known as non-patent market exclusivity, against the FDA's acceptance or approval of certain competitor applications.

23

TABLE OF CONTENTS

Patent term restoration can compensate for time lost during product development and the regulatory review process by returning up to five years of patent life for a patent that covers a new product or its use. This period is generally one-half the time between the effective date of an IND (falling after issuance of the patent) and the submission date of an NDA, plus the time between the submission date of a BLA and the approval of that application. Patent term restorations, however, cannot extend the remaining term of a patent beyond a total of 14 years. The application for patent term extension is subject to approval by the United States Patent and Trademark Office in conjunction with the FDA. It takes at least six months to obtain approval of the application for patent term extension. Up to five years of interim one-year extensions are available if a product is still undergoing development or FDA review at the time of the expiration.

A patent term extension is only available when the FDA approves a biological product for the first time. However, we cannot be certain that the PTO and the FDA will agree with our analysis or will grant a patent term extension.

A biological product can obtain pediatric market exclusivity in the United States. Pediatric exclusivity, if granted, adds six months to existing exclusivity periods and patent terms. This six-month exclusivity, which runs from the end of other exclusivity protection or patent term, may be granted based on the voluntary completion of a pediatric study in accordance with an FDA-issued Written Request for such a study.

An abbreviated approval pathway for biological products shown to be similar to, or interchangeable with, an FDA-licensed reference biological product was created by the Biologics Price Competition and Innovation Act of 2009, which was part of the Patient Protection and Affordable Care Act, or PPACA, signed into law on March 23, 2010. This amendment to the PHS Act attempts to minimize duplicative testing. Biosimilarity, which requires that there be no clinically meaningful differences between the biological product and the reference product in terms of safety, purity, and potency, can be shown through analytical studies, animal studies, and a clinical study or studies. Interchangeability requires that a biological product is biosimilar to the reference biological product and the product must demonstrate that it can be expected to produce the same clinical results as the reference product and, for products administered multiple times, the product and the reference product may be switched after one has been previously administered without increasing safety risks or risks of diminished efficacy relative to exclusive use of the reference biological product. However, complexities associated with the larger, and often more complex, structure of biological products, as well as the process by which such products are manufactured, pose significant hurdles to implementation that are still being worked out by the FDA.

A reference biological product is granted twelve years of exclusivity from the time of first licensure of the reference product. On April 10, 2013, President Obama released his proposed budget for fiscal year 2014 and proposed to cut this twelve year period of exclusivity down to seven years. He also proposed to prohibit additional periods of exclusivity for brand biological products due to minor changes in product formulation, a practice often referred to as evergreening. The first biological product submitted under the abbreviated approval pathway that is determined to be interchangeable with the reference product has exclusivity against other biologics submitting under the abbreviated approval pathway for the lesser of (i) one year after the first commercial marketing, (ii) 18 months after approval if there is no legal challenge, (iii) 18 months after the resolution in the applicant's favor of a lawsuit challenging the biologic's patents if an application has been submitted, or (iv) 42 months after the application has been approved if a lawsuit is ongoing within the 42-month period.

FDA Post-Approval Requirements

Maintaining substantial compliance with applicable federal, state, local, and foreign statutes and regulations requires the expenditure of substantial time and financial resources. Rigorous and extensive FDA regulation of biological

products continues after approval, particularly with respect to GMP. We will rely, and expect to continue to rely, on third parties for the production of clinical and commercial quantities of any products that we may commercialize. Manufacturers of our products are required to comply with applicable requirements in the GMP regulations, including quality control and quality assurance and maintenance of records and documentation. We cannot be certain that we or our present or future suppliers will be able to comply with the GMP and other FDA regulatory requirements. Other post-approval requirements applicable to biological products include reporting of GMP deviations that may affect the identity, potency, purity and

TABLE OF CONTENTS

overall safety of a distributed product, record-keeping requirements, reporting of adverse effects, reporting updated safety and efficacy information, and complying with electronic record and signature requirements. After a BLA is approved, the product also may be subject to official lot release. As part of the manufacturing process, the manufacturer is required to perform certain tests on each lot of the product before it is released for distribution. If the product is subject to official release by the FDA, the manufacturer submits samples of each lot of product to the FDA together with a release protocol showing a summary of the history of manufacture of the lot and the results of all of the manufacturer's tests performed on the lot. The FDA also may perform certain confirmatory tests on lots of some products, such as viral vaccines, before releasing the lots for distribution by the manufacturer. In addition, the FDA conducts laboratory research related to the regulatory standards on the safety, purity, potency, and effectiveness of biological products.

Discovery of previously unknown problems or the failure to comply with the applicable regulatory requirements, by us or our suppliers, may result in restrictions on the marketing of a product or withdrawal of the product from the market as well as possible civil or criminal sanctions and adverse publicity. FDA sanctions could include refusal to approve pending applications, withdrawal of an approval, clinical hold, warning or untitled letters, product recalls, product seizures, total or partial suspension of production or distribution, injunctions, fines, refusals of government contracts, mandated corrective advertising or communications with doctors, debarment, restitution, disgorgement of profits, or civil or criminal penalties. Any agency or judicial enforcement action could have a material adverse effect on us.

Biological product manufacturers and other entities involved in the manufacture and distribution of approved biological products are required to register their facilities with the FDA and certain state agencies, and are subject to periodic unannounced inspections by the FDA and certain state agencies for compliance with GMPs and other laws.

In addition, changes to the manufacturing process or facility generally require prior FDA approval before being implemented and other types of changes to the approved product, such as adding new indications and additional labeling claims, are also subject to further FDA review and approval.

Labeling, Marketing and Promotion

The FDA closely regulates the labeling, marketing and promotion of biological products, including direct-to-consumer advertising, promotional activities involving the internet, and industry-sponsored scientific and educational activities. While doctors are free to prescribe any product approved by the FDA for any use, a company can only make claims relating to safety and efficacy of a biological product that are consistent with FDA approval, and the company is allowed to actively market a biological product only for the particular use and treatment approved by the FDA. In addition, any claims we make for our products in advertising or promotion must be appropriately balanced with important safety information and otherwise be adequately substantiated. Failure to comply with these requirements can result in adverse publicity, warning letters, corrective advertising, injunctions and potential civil and criminal penalties.

Other Healthcare Laws and Compliance Requirements

In the United States, our activities are potentially subject to regulation by various federal, state and local authorities in addition to the FDA, including the Centers for Medicare and Medicaid Services (formerly the Health Care Financing Administration), other divisions of the United States Department of Health and Human Services (e.g., the Office of Inspector General), the United States Department of Justice and individual United States Attorney offices within the Department of Justice and state and local governments.

International Regulation

In addition to regulations in the United States, we will be subject to a variety of foreign regulations governing clinical trials and commercial sales and distribution of our future products. Our manufacturing facility in Ljubljana Slovenia is subject to inspection and regulation by JAZMP, the Slovenian agency that regulates and supervises pharmaceutical products in Slovenia. Whether or not we obtain FDA approval for a product, we must obtain approval of a product by the comparable regulatory authorities of foreign countries before we can commence clinical trials or marketing of the product in those countries. The approval process varies from country to country, and the time may be longer or shorter than that required for FDA approval. The requirements governing the conduct of clinical trials, product licensing, pricing and reimbursement vary greatly from country to country.

TABLE OF CONTENTS

Under European Union regulatory systems, marketing authorizations may be submitted either under a centralized or a mutual recognition procedure. The centralized procedure provides for the grant of a single marketing authorization that is valid for all European Union member states. The mutual recognition procedure provides for mutual recognition of national approval decisions. Under this procedure, the holder of a national marketing authorization may submit an application to the remaining member states. Within 90 days of receiving the applications and assessment report, each member state must decide whether to recognize approval.

Pricing and Reimbursement

Although none of our product candidates has been commercialized for any indication, if they are approved for marketing, commercial success of our product candidates will depend, in part, upon the availability of coverage and reimbursement from third-party payors at the federal, state and private levels.

Government payor programs, including Medicare and Medicaid, private healthcare insurance companies and managed-care plans have attempted to control costs by limiting coverage and the amount of reimbursement for particular drug treatments. The U.S. Congress and state legislatures from time to time propose and adopt initiatives aimed at cost-containment. Ongoing federal and state government initiatives directed at lowering the total cost of healthcare will likely continue to focus on healthcare reform, the cost of prescription drugs and biological products and on the reform of the Medicare and Medicaid payment systems. Examples of how limits on drug coverage and reimbursement in the United States may cause reduced payments for drugs in the future include:

changing Medicare reimbursement methodologies;
fluctuating decisions on which drugs to include in formularies;
revising drug rebate calculations under the Medicaid program; and
reforming drug importation laws.

Indeed, the Patient Protection and Affordable Care Act, as amended by the Health Care and Education Reconciliation Act of 2010, or collectively, the Healthcare Reform Act, which was signed into law in March of 2010, substantially changes the way healthcare is financed by both governmental and private insurers, and significantly impacts drugs and biological products manufacturers. The Healthcare Reform Act includes, among other things, the following measures:

annual, non-deductible fees on any entity that manufactures or imports certain prescription drugs;
increases in Medicaid rebates owed by manufacturers under the Medicaid Drug Rebate Program for both branded and generic drugs;
a new Patient-Centered Outcomes Research Institute to oversee, identify priorities in and conduct comparative clinical effectiveness research;
new requirements for manufacturers to discount drug prices to eligible patients by 50 percent at the pharmacy level and for mail order services in order for their outpatient drugs to be covered under Medicare Part D; and
an increase in the number of entities eligible for discounts under the Public Health Service pharmaceutical pricing program.

Additionally, some third-party payors also require pre-approval of coverage for new or innovative drug therapies before they will reimburse healthcare providers who use such therapies. While we cannot predict whether any proposed cost-containment measures will be adopted or otherwise implemented in the future, the announcement or adoption of these proposals could have a material adverse effect on our ability to obtain adequate prices for our product candidates and operate profitably.

In the United States and markets in other countries, sales of any products for which we receive regulatory approval for commercial sale will depend in part on the availability of reimbursement from third-party payors, including

government health administrative authorities, managed care providers, private health insurers and other organizations. Third-party payors are increasingly examining the medical necessity and cost-effectiveness of medical products and services, in addition to their safety and efficacy, and,

TABLE OF CONTENTS

accordingly, significant uncertainty exists as to the reimbursement status of newly approved therapeutics. Adequate third-party reimbursement may not be available for our products to enable us realize an appropriate return on our investment in research and product development.

Employees

As of October 20, 2014, we had 22 full-time employees.

Web Site Access to Company s Reports

Our website address is *http://www.ampliphio.com*. Our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and amendments to those reports filed or furnished pursuant to Section 13(a) or 15(d) of the Exchange Act are available free of charge through our website as soon as reasonably practicable after they are electronically filed with, or furnished to, the Securities and Exchange Commission, or the SEC. We will also provide the reports in electronic or paper form free of charge upon request. Our website and the information contained on, or that can be accessed through our website, will not be deemed to be incorporated by reference in, and are not considered part of, this registration statement.

TABLE OF CONTENTS

Item 1A. RISK FACTORS.

An investment in our common stock involves a high degree of risk. We operate in an industry that involves numerous risks and uncertainties. The risks and uncertainties described below are not the only ones we face. Other risks and uncertainties, including those that we do not currently consider material, may impair our business. If any of the risks discussed below actually occur, our business, financial condition, operating results or cash flows could be materially adversely affected. This could cause the trading price of our common stock to decline, and you may lose all or part of your investment.

Risks Related to Our Business

We are seeking to develop antibacterial agents using bacteriophage technology, which has not resulted in any approved product on the market to date.

We are developing our product candidates with bacteriophage technology. We have not, nor to our knowledge has any other company, received regulatory approval from the U.S. Food and Drug Administration, or FDA or equivalent foreign agencies for a pharmaceutical drug based on this approach. While *in vitro* studies have characterized the behavior of bacteriophages in cell cultures and there exists a body of literature regarding the use of phage therapy in humans, the safety and efficacy of phage therapy in humans has not been extensively studied in well-controlled modern clinical trials. Most of the prior research on phage-based therapy was conducted in the former Soviet Union prior to and immediately after World War II and lacked appropriate control group design or lacked control groups at all. Furthermore, the standard of care has changed substantially during the ensuing decades since those studies were performed, making claims of improved cure rates open for debate. We cannot be certain that our approach will lead to the development of approvable or marketable drugs.

Developing phage-based therapies on a commercial scale will also require developing new manufacturing processes and techniques. We and our third-party collaborators may experience delays in developing manufacturing capabilities for our product candidates, and may not be able to do so at the scale required to conduct efficiently the clinical trials required to obtain regulatory approval of our products, or to manufacture commercial quantities of our products, if approved.

In addition, the FDA or other regulatory agencies may lack experience in evaluating the safety and efficacy of drugs based on these targeting approaches, which could lengthen the regulatory review process, increase our development costs and delay or prevent commercialization of our product candidates.

Delays in our clinical trials could result in us not achieving anticipated developmental milestones when expected, increased costs and delay our ability to obtain regulatory approval and commercialize our product candidates.

Delays in our ability to commence or enroll patients for our clinical trials could result in us not meeting anticipated clinical milestones and could materially impact our product development costs and delay regulatory approval of our product candidates. We do not know whether planned clinical trials will be commenced or completed on schedule, if at all. Clinical trials can be delayed for a variety of reasons, including:

delays in the development of manufacturing capabilities for our product candidates to enable their consistent production at clinical trial scale;

delays in the commencement of clinical trials as a result of clinical trial holds or the need to obtain additional information to complete an Investigational New Drug Application (IND);

delays in obtaining regulatory approval to commence new trials;

adverse safety events experienced during our clinical trials;

delays in obtaining clinical materials;

slower than expected patient recruitment for participation in clinical trials; and

delays in reaching agreement on acceptable clinical trial agreement terms with prospective sites or obtaining institutional review board approval.

28

TABLE OF CONTENTS

If we do not successfully commence or complete our clinical trials on schedule, the price of our common stock may decline.

We have not completed formulation development of any of our product candidates.

The development of our bacteria phage product candidates requires that we isolate, select and combine a number of bacteria phages that target the desired bacteria for that product candidate. The selection of bacteria phages for any of our product candidates is based on a variety of factors, including without limitation the ability of the selected phages, in combination, to successfully kill the targeted bacteria, the degree of cross-reactivity of the individual phages with the same part of the bacterial targets, the ability of the combined phages to satisfy regulatory requirements, our ability to manufacture sufficient quantities of the phages, intellectual property rights of third parties, and other factors. While we have selected an initial formulation of AmpliPhage-002 for the treatment of methicillin-resistant *S. aureus* (MRSA) infections, there can be no assurance that this will be the final formulation of AmpliPhage-002 for commercialization. In addition, we are still finalizing initial formulations of AmpliPhage-001 and AmpliPhage-004. If we are unable to complete formulation development of our product candidates in the time frame that we have anticipated, then our product development timelines, and the regulatory approval of our product candidates, could be delayed.

We must hire a new chief executive officer and additional members of our senior management team.

By mutual agreement of the Board of Directors of the Company and Philip J. Young, Mr. Young stepped down from his role as President and Chief Executive Officer of the Company in September 2014. We are looking to replace Mr. Young with a new Chief Executive Officer, and in the interim, Jeremy Curnock Cook, the Chairman of our Board of Directors, is acting as interim Chief Executive Officer, and Wendy Johnson, a member of our Board of Directors, is acting as interim Chief Operating Officer. If we are unable to find a suitable Chief Executive Officer, we may have difficulty executing our business plans, which could cause delays in the commencement of clinical trials or other business activities. The change in Chief Executive Officer may also make it difficult to retain other personnel, and the loss of additional personnel could also have an adverse impact on our business and operations. We are also looking to add additional members to the Company's senior management team, including the possible additions of senior staff to manage key functions in research, clinical and non-clinical development. If we do not hire additional senior management personnel, we may not be able to effectively manage our business and operations.

Our auditors have expressed substantial doubt about our ability to continue as a going concern and we must raise additional capital to continue operations.

Our consolidated financial statements were prepared under the assumption that we would continue our operations as a going concern. However, as discussed in Note 2 to our consolidated financial statements, we have had recurring losses from operations, negative operating cash flow and an accumulated deficit that raise substantial doubt about our ability to continue as a going concern. Uncertainty concerning our ability to continue as a going concern may hinder our ability to obtain future financing.

In December 2013, we completed a private placement of shares of our common stock, which raised approximately \$18 million, prior to commissions. We do not generate any cash from operations and must raise additional funds in

order to continue operating our business. We expect to continue to fund our operations primarily through equity and debt financings in the future. If additional capital is not available, we may not be able to continue to operate our business pursuant to our business plan or we may have to discontinue our operations entirely.

Developing drugs and conducting clinical trials is expensive. Our future funding requirements will depend on many factors, including:

- the costs and timing of our research and development activities;
- the progress and cost of our clinical trials and other research and development activities;
- the cost and timing of securing manufacturing capabilities for our clinical product candidates and commercial products, if any;

29

TABLE OF CONTENTS

the terms and timing of any collaborative, licensing, acquisition or other arrangements that we may establish;
the costs and timing of obtaining regulatory approvals;
the costs of filing, prosecuting, defending and enforcing any patent applications, claims, patents and other intellectual property rights; and
the costs of lawsuits involving us or our product candidates.

We will seek additional capital to support our product development activities. We may seek funds through arrangements with collaborators or others that may require us to relinquish rights to the products candidates that we might otherwise seek to develop or commercialize independently. We cannot be certain that we will be able to enter into any such arrangements on reasonable terms, if at all.

We may seek to raise capital through a variety of sources, including:

the public equity market;
private equity financing;
collaborative arrangements;
licensing arrangements; and/or
public or private debt.

Our ability to raise additional funds will depend, in part, on the status of our product development activities and other business operations, as well as factors related to financial, economic, and market conditions, collaboration or license agreement with others and factors related to financial, economic and market conditions, many of which are beyond our control. We cannot be certain that sufficient funds will be available to us when required or on satisfactory terms, if at all. Raising additional capital through the sale of securities could cause significant dilution to our stockholders. If adequate funds are not available, we may be required to significantly reduce or refocus our operations or to obtain funds through additional arrangements that may require us to relinquish rights to certain of our products, technologies or potential markets, any of which could delay or require that we curtail or eliminate some or all of our development programs or otherwise have a material adverse effect on our business, financial condition and results of operations. In addition, we may have to delay, reduce the scope of or eliminate some of our research and development, which could delay the time to market for any of our product candidates, if adequate funds are not available.

If we are unable to secure additional financing on a timely basis or on terms favorable to us, we may be required to cease or reduce certain research and development projects, to sell some or all of our technology or assets or to merge all or a portion of our business with another entity. Insufficient funds may require us to delay, scale back, or eliminate some or all of our activities, and if we are unable to obtain additional funding, there is uncertainty regarding our continued existence.

Preclinical studies and Phase 1 or 2 clinical trials of our product candidates may not predict the results of subsequent human clinical trials.

Preclinical studies, including studies of our product candidates in animal models of disease, may not accurately predict the result of human clinical trials of those product candidates. In particular, promising animal studies suggesting the efficacy of prototype phage products in the treatment of bacterial infections, such as *P. aeruginosa* may not predict the ability of these products to treat similar infections in humans. Our phage technology may be found not to be efficacious in treating bacterial infections alone or in combination with other agents, when studied in human clinical trials.

To satisfy FDA or foreign regulatory approval standards for the commercial sale of our product candidates, we must demonstrate in adequate and controlled clinical trials that our product candidates are safe and effective. Success in

Preclinical studies and Phase 1 or 2 clinical trials of our product candidates may not predict the results of subsequent

early clinical trials, including Phase 2 trials, does not ensure that later clinical trials will be successful. Our initial results from Phase 1/2 clinical trials also may not be confirmed by later analysis or subsequent larger clinical trials. A number of companies in the pharmaceutical industry have suffered significant setbacks in advanced clinical trials, even after obtaining promising results in earlier clinical trials.

TABLE OF CONTENTS

Our product candidates must undergo rigorous clinical testing, the results of which are uncertain and could substantially delay or prevent us from bringing them to market.

Before we can obtain regulatory approval for a product candidate, we must undertake extensive clinical testing in humans to demonstrate safety and efficacy to the satisfaction of the FDA or other regulatory agencies. Clinical trials of new drug candidates sufficient to obtain regulatory marketing approval are expensive and take years to complete.

We cannot be certain of successfully completing clinical testing within the time frame we have planned, or at all. We may experience numerous unforeseen events during, or as a result of, the clinical trial process that could delay or prevent us from receiving regulatory approval or commercializing our product candidates, including the following:

our clinical trials may produce negative or inconclusive results, and we may decide, or regulators may require us, to conduct additional clinical and/or preclinical testing or to abandon programs;

the results obtained in earlier stage clinical testing may not be indicative of results in future clinical trials; clinical trial results may not meet the level of statistical significance required by the FDA or other regulatory agencies;

enrollment in our clinical trials for our product candidates may be slower than we anticipate, resulting in significant delays and additional expense;

we, or regulators, may suspend or terminate our clinical trials if the participating patients are being exposed to unacceptable health risks; and

the effects of our product candidates on patients may not be the desired effects or may include undesirable side effects or other characteristics that may delay or preclude regulatory approval or limit their commercial use, if approved.

Completion of clinical trials depends, among other things, on our ability to enroll a sufficient number of patients, which is a function of many factors, including:

the therapeutic endpoints chosen for evaluation;

the eligibility criteria defined in the protocol;

the perceived benefit of the investigational drug under study;

the size of the patient population required for analysis of the clinical trial's therapeutic endpoints;

our ability to recruit clinical trial investigators and sites with the appropriate competencies and experience;

our ability to obtain and maintain patient consents; and

competition for patients by clinical trial programs for other treatments.

We may experience difficulties in enrolling patients in our clinical trials, which could increase the costs or affect the timing or outcome of these clinical trials. This is particularly true with respect to diseases with relatively small patient populations.

We must develop manufacturing processes for our lead product candidates and any delay in or our inability to do so would result in delays in our clinical trials and materially and negatively affect our business and results.

We are developing novel manufacturing processes for the production of AmpliPhage-002 for treatment of *S. aureus* (MRSA) infections, AmpliPhage-001 for the treatment of *P. aeruginosa* infections and AmpliPhage-004 for the treatment of *C. difficile* infections at facilities in Ljublyana, Slovenia. The manufacturing processes for our product candidates, and the scale up of such processes for clinical trials, is novel, and there can be no assurance that we will be able to complete this work in a timely manner, if at all. Any delay in the development or scale up of these

Our product candidates must undergo rigorous clinical testing, the results of which are uncertain and could substantially

manufacturing processes could delay the start of clinical

TABLE OF CONTENTS

trials and harm our business. Our facilities in Slovenia must also undergo inspections by JAZMP, the Slovenian agency that regulates and supervises pharmaceutical products in Slovenia, for compliance with their and the FDA's current good manufacturing practice regulations, or cGMP regulations, before the respective product candidates can be approved for use in clinical trials or commercialization. As a result of an initial inspection, we are taking certain non-critical corrective actions regarding the manufacture of AmpliPhage-002, which we believe will lead to certification by JAZMP to manufacture AmpliPhage-002; however, there can be no assurance that we will receive such certification. We will also be subject to additional inspections for GMP compliance for our other product candidates, and may be subject to additional inspections for AmpliPhage-002. In the event these facilities do not receive a satisfactory cGMP inspection for the manufacture of our product candidates, we may need to fund additional modifications to our manufacturing process, conduct additional validation studies, or find alternative manufacturing facilities, any of which would result in significant cost to us as well as a delay of up to several years in obtaining approval for such product candidates.

Our manufacturing facilities will be subject to ongoing periodic inspection by the European regulatory authorities, including JAZMP, and the FDA for compliance with European and FDA cGMP regulations. Compliance with these regulations and standards is complex and costly, and there can be no assurance that we will be able to comply. Any failure to comply with applicable regulations could result in sanctions being imposed (including fines, injunctions and civil penalties), failure of regulatory authorities to grant marketing approval of our product candidates, delays, suspension or withdrawal of approvals, license revocation, seizures or recalls of product candidates or products, operating restrictions and criminal prosecution.

We have conducted and may in the future conduct clinical trials for our products or product candidates outside the United States and the FDA may not accept data from such trials.

We have conducted and may in the future choose to conduct one or more of our clinical trials outside the United States. Although the FDA may accept data from clinical trials conducted outside the United States, acceptance of such study data by the FDA is subject to certain conditions. For example, the study must be well designed and conducted and performed by qualified investigators in accordance with ethical principles. The study population must also adequately represent the U.S. population, and the data must be applicable to the U.S. population and U.S. medical practice in ways that the FDA deems clinically meaningful. Generally, the patient population for any clinical studies conducted outside of the United States must be representative of the population for whom we intend to label the product in the United States. In addition, such studies would be subject to the applicable local laws and FDA acceptance of the data would be dependent upon its determination that the studies also complied with all applicable U.S. laws and regulations. There can be no assurance the FDA will accept data from trials conducted outside of the United States. If the FDA does not accept any such data, it would likely result in the need for additional trials, which would be costly and time consuming and delay aspects of our business plan.

We may need to license additional intellectual property rights.

The development and commercialization of phage-based antibacterial agents may require us to obtain rights to intellectual property from third parties. For example, pursuant to our Collaborative Research and Development Agreement, or CRADA, with the United States Army Medical Research and Materiel Command, or USAMRMC and the Walter Reed Army Institute of Research, or WRAIR, we are focusing on developing bacteriophage therapeutics to treat *S. aureus*, *E. coli* and *P. aeruginosa* infections. To the extent the intellectual property is generated from the USAMRMC or WRAIR that is used in a commercial product, we may be obligated to make payments such as royalties, licensing fees and milestone payments. We may also determine that it is necessary or advisable to license

other intellectual property from third parties. There can be no assurance that such intellectual property rights would be available on commercially reasonable terms, if at all.

We are subject to significant regulatory approval requirements, which could delay, prevent or limit our ability to market our product candidates.

Our research and development activities, preclinical studies, clinical trials and the anticipated manufacturing and marketing of our product candidates are subject to extensive regulation by the FDA and other regulatory agencies in the United States and by comparable authorities in Europe and elsewhere. There

32

TABLE OF CONTENTS

can be no assurance that our planned manufacturing facilities will satisfy the requirements of the FDA or comparable foreign authorities. We require the approval of the relevant regulatory authorities before we may commence commercial sales of our product candidates in a given market. The regulatory approval process is expensive and time-consuming, and the timing of receipt of regulatory approval is difficult to predict. Our product candidates could require a significantly longer time to gain regulatory approval than expected, or may never gain approval. We cannot be certain that, even after expending substantial time and financial resources, we will obtain regulatory approval for any of our product candidates. A delay or denial of regulatory approval could delay or prevent our ability to generate product revenues and to achieve profitability.

Changes in regulatory approval policies during the development period of any of our product candidates, changes in, or the enactment of, additional regulations or statutes, or changes in regulatory review practices for a submitted product application may cause a delay in obtaining approval or result in the rejection of an application for regulatory approval.

Regulatory approval, if obtained, may be made subject to limitations on the indicated uses for which we may market a product. These limitations could adversely affect our potential product revenues. Regulatory approval may also require costly post-marketing follow-up studies. In addition, the labeling, packaging, adverse event reporting, storage, advertising, promotion and record-keeping related to the product will be subject to extensive ongoing regulatory requirements. Furthermore, for any marketed product, its manufacturer and its manufacturing facilities will be subject to continual review and periodic inspections by the FDA or other regulatory authorities. Failure to comply with applicable regulatory requirements may, among other things, result in fines, suspensions of regulatory approvals, product recalls, product seizures, operating restrictions and criminal prosecution.

The FDA and foreign regulatory authorities may impose significant restrictions on the indicated uses and marketing of pharmaceutical products.

FDA rules for pharmaceutical promotion require that a company not promote an unapproved drug or an approved drug for an unapproved use. In addition to FDA requirements, regulatory and law enforcement agencies, such as the United States Department of Health and Human Services Office of Inspector General and the United States Department of Justice, monitor and investigate pharmaceutical sales, marketing and other practices. For example, sales, marketing and scientific/educational grant programs must comply with the Medicare-Medicaid Anti-Fraud and Abuse Act, as amended, the False Claims Act, as amended, and similar state laws. In recent years, actions by companies sales forces and marketing departments have been scrutinized intensely to ensure, among other things, that actions by such groups do not qualify as kickbacks to healthcare professionals. A kickback refers to the provision of any item of value to a healthcare professional or other person in exchange for purchasing, recommending, or referring an individual for an item or service reimbursable by a federal healthcare program. These kickbacks increase the expenses of the federal healthcare program and may result in civil penalties, criminal prosecutions, and exclusion from participation in government programs, any of which would adversely affect our financial condition and business operations. In addition, even if we are not determined to have violated these laws, government investigations into these issues typically require the expenditure of significant resources and generate negative publicity, which would also harm our financial condition. Comparable laws also exist at the state level.

Our relationships with customers and third-party payors will be subject to applicable anti-kickback, fraud and abuse and other healthcare laws and regulations, which could expose us to criminal sanctions, civil penalties, contractual damages, reputational harm and diminished profits and future

We are subject to significant regulatory approval requirements, which could delay, prevent or limit our ability to market

earnings.

Healthcare providers, physicians and third-party payors will play a primary role in the recommendation and prescription of any product candidates for which we obtain marketing approval. Our future arrangements with third-party payors and customers may expose us to broadly applicable fraud and abuse and other healthcare laws and regulations that may constrain the business or financial arrangements and relationships through which we would market, sell and distribute our products. As a biotechnology company, even though we do not and will not control referrals of healthcare services or bill directly to Medicare, Medicaid or other third-party payors, federal and state healthcare laws and regulations pertaining to fraud and abuse and patients' rights are and will be applicable to our business. Federal healthcare Anti-Kickback Statute will

TABLE OF CONTENTS

constrain our marketing practices, educational programs, pricing policies, and relationships with healthcare providers or other entities, by prohibiting, among other things, persons from knowingly and willfully soliciting, offering, receiving or providing remuneration, directly or indirectly, in cash or in kind, to induce or reward, or in return for, either the referral of an individual for, or the purchase, order or recommendation of, any good or service, for which payment may be made under a federal healthcare program such as Medicare and Medicaid. Federal civil and criminal false claims laws and civil monetary penalty laws impose criminal and civil penalties, including through civil whistleblower or qui tam actions, against individuals or entities for knowingly presenting, or causing to be presented, to the federal government, including the Medicare and Medicaid programs, claims for payment that are false or fraudulent or making a false statement to avoid, decrease or conceal an obligation to pay money to the federal government. The federal Health Insurance Portability and Accountability Act of 1996, or HIPAA, imposes criminal and civil liability for executing a scheme to defraud any healthcare benefit program and also created federal criminal laws that prohibit knowingly and willfully falsifying, concealing or covering up a material fact or making any materially false statements in connection with the delivery of or payment for healthcare benefits, items or services. HIPAA, as amended by the Health Information Technology for Economic and Clinical Health Act, or HITECH, also imposes obligations, including mandatory contractual terms, with respect to safeguarding the privacy, security and transmission of individually identifiable health information.

The federal physician sunshine requirements under the Affordable Care Act requires manufacturers of drugs, devices, biologics and medical supplies to report annually to HHS information related to payments and other transfers of value to physicians, other healthcare providers, and teaching hospitals, and ownership and investment interests held by physicians and other healthcare providers and their immediate family members and applicable group purchasing organizations. Analogous state and foreign laws and regulations, such as state anti-kickback and false claims laws, may apply to sales or marketing arrangements and claims involving healthcare items or services reimbursed by non-governmental third-party payors, including private insurers; some state laws require pharmaceutical companies to comply with the pharmaceutical industry's voluntary compliance guidelines and the relevant compliance guidance promulgated by the federal government and may require drug manufacturers to report information related to payments and other transfers of value to physicians and other healthcare providers or marketing expenditures. State and foreign laws also govern the privacy and security of health information in specified circumstances, many of which differ from each other in significant ways and often are not preempted by HIPAA, thus complicating compliance efforts. Efforts to ensure that our business arrangements with third parties will comply with applicable healthcare laws and regulations will involve substantial costs. It is possible that governmental authorities will conclude that our business practices may not comply with current or future statutes, regulations or case law involving applicable fraud and abuse or other healthcare laws and regulations. If our operations are found to be in violation of any of these laws or any other governmental regulations that may apply to us, we may be subject to significant civil, criminal and administrative penalties, damages, fines, imprisonment, exclusion from government funded healthcare programs, such as Medicare and Medicaid, and the curtailment or restructuring of our operations. If any physicians or other healthcare providers or entities with whom we expect to do business are found to not be in compliance with applicable laws, they may be subject to criminal, civil or administrative sanctions, including exclusions from government funded healthcare programs.

We are, and in the future may be, subject to new federal and state requirements to submit information on our open and completed clinical trials to public registries and databases.

In 1997, a public registry of open clinical trials involving drugs intended to treat serious or life-threatening diseases or conditions was established under the Food and Drug Administration Modernization Act, or FDMA, in order to promote public awareness of and access to these clinical trials. Under FDMA, pharmaceutical manufacturers and other

clinical trial sponsors are required to post the general purpose of these clinical trials, as well as the eligibility criteria, location and contact information of the clinical trials. Since the establishment of this registry, there has been significant public debate focused on broadening the types of clinical trials included in this or other registries, as well as providing for public access to clinical trial results. A voluntary coalition of medical journal editors has adopted a resolution to publish results only from those clinical trials that have been registered with a no-cost, publicly accessible database, such as *www.clinicaltrials.gov*. The Pharmaceuticals and Research Manufacturers of America has also issued voluntary principles for its members to make results from certain clinical trials publicly available and has established a website for this purpose. Other groups have adopted or are

TABLE OF CONTENTS

considering similar proposals for clinical trial registration and the posting of clinical trial results. The state of Maine has enacted legislation, with penalty provisions, requiring the disclosure of results from clinical trials involving drugs marketed in the state, and similar legislation has been introduced in other states. Federal legislation was introduced in the fall of 2004 to expand *www.clinicaltrials.gov* and to require the inclusion of clinical trial results in this registry. In some states, such as New York, prosecutors have alleged that a lack of disclosure of clinical trial information constitutes fraud, and these allegations have resulted in settlements with pharmaceutical companies that include agreements to post clinical trial results. Our failure to comply with any clinical trial posting requirements could expose us to negative publicity, fines, and other penalties, all of which could materially harm our business.

We do not have a sales force and do not currently have plans to develop one.

The commercial success of any of our product candidates will depend upon the strength of sales and marketing efforts for them. We do not have a sales force and have no experience in sales, marketing or distribution. To successfully commercialize our product candidates, we will need to develop such a capability ourselves or seek assistance from a third party with a large distribution system and a large direct sales force. We may be unable to put such a plan in place. In addition, if we arrange for others to market and sell our products, our revenues will depend upon the efforts of those parties. Such arrangements may not succeed. Even if one or more of our product candidates is approved for marketing, if we fail to establish adequate sales, marketing and distribution capabilities, independently or with others, our business will be materially harmed.

Risks Related to Our Financial Performance and Operations

We have incurred losses since our inception and anticipate that we will continue to incur significant losses for the foreseeable future, and our future profitability is uncertain.

We have incurred losses in each year since our inception in 1992. Prior to the merger of Targeted Genetics Corporation with Biocontrol in January 2011, our accumulated deficit was \$315.5 million, and Biocontrol had an accumulated deficit of \$6.9 million. Since January 2011 and through September 30, 2014, we have incurred an accumulated deficit of \$32.9 million, and we expect to incur losses for the foreseeable future. We have devoted, and will continue to devote for the foreseeable future, substantially all of our resources to research and development of our product candidates. For the year ended December 31, 2012, we had an operating loss of \$4.3 million and a net loss of \$1.1 million. For the year ended December 31, 2013, we had an operating loss and a net loss of \$57.7 million. Clinical trials and activities associated with discovery research are costly. We do not expect to generate any revenue from the commercial sales of our product candidates in the near term, and we expect to continue to have significant losses for the foreseeable future.

To attain ongoing profitability, we will need to develop products successfully and market and sell them effectively, or rely on other parties to do so. We cannot predict when we will achieve ongoing profitability, if at all. We have never generated revenue from the commercial sales of our product candidates, and there is no guarantee that we will be able to do so in the future. If we fail to become profitable, or if we are unable to fund our continuing losses, we would be unable to continue our research and development programs.

Our success depends in part on retaining and motivating our personnel.

Our success depends on our continued ability to attract, retain and motivate highly qualified management, clinical and scientific personnel and on our ability to develop and maintain important relationships with leading academic institutions, clinicians and scientists.

As of October 20, 2014, we had 22 employees. Our success will depend on our ability to retain and motivate remaining personnel and hire additional qualified personnel when required. Competition for qualified personnel in the biotechnology field is intense. We face competition for personnel from other biotechnology and pharmaceutical companies, universities, public and private research institutions and other organizations. We may not be able to attract and retain qualified personnel on acceptable terms given the competition for such personnel. If we are unsuccessful in our retention, motivation and recruitment efforts, we may be unable to execute our business strategy.

35

TABLE OF CONTENTS

We have determined that a material weakness existed in our system of internal control over financial reporting, which could have had a material impact on our business.

We are required to maintain internal control over financial reporting adequate to provide reasonable assurance regarding the reliability of financial reporting and the preparation of our consolidated financial statements in accordance with generally accepted accounting principles. In connection with the restatement of our consolidated financial statements for the year ended December 31, 2012 and the quarter ended September 30, 2013, we determined that we had a material weakness as of December 31, 2013, namely that our controls over the evaluation and review of complex and non-routine transactions were not effective.

Due to this material weakness, we have concluded that as of December 31, 2013, our internal controls over financial reporting were not effective. Subsequent to December 31, 2013, we have restated our consolidated financial statements as of December 31, 2013 to correct for errors caused by this weakness.

We do not expect that our internal control over financial reporting will prevent all errors and all fraud. A control system, no matter how well designed and operated, can provide only reasonable, not absolute, assurance that the control system's objectives will be met. Further, the design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Controls can be circumvented by the individual acts of some persons, by collusion of two or more people, or by management override of the controls. Over time, controls may become inadequate because changes in conditions or deterioration in the degree of compliance with policies or procedures may occur. Because of the inherent limitations in a cost-effective control system, misstatements due to error or fraud may occur and not be detected. As a result, we cannot assure you that significant deficiencies or material weaknesses in our internal control over financial reporting will not be identified in the future. A material weakness means a deficiency, or combination of deficiencies, in internal control over financial reporting such that there is a reasonable possibility that a material misstatement of the registrant's annual or interim financial statements will not be prevented or detected on a timely basis.

Risks Related to Our Dependence on Third Parties

We rely on third parties for aspects of product development.

We rely on third parties such as the University of Leicester and the U.S. Army for certain aspects of product development. We are working with the University of Leicester for research and development of product candidates to treat *C. difficile* infections. We are working with the U.S. Army for research and development of product candidates to treat *S. aureus* infections, and we are working with Intrexon to develop new strains of manufacturing hosts for our phage therapies. Because we rely on third parties to conduct these activities, we have less control over the success of these programs than we would if we were conducting them on our own. Factors beyond our control that could impact the success of these programs include the amount of resources devoted to the programs by the applicable third party, the staffing of those projects by third-party personnel, and the amount of time such personnel devote to our programs compared to other programs. Failure of our third-party collaborators to successfully complete the projects that we are working on with them could result in delays in product development and the need to expend additional resources, increasing our expenses beyond current expectations.

We will rely on third parties to conduct some of our clinical trials, and their failure to perform their obligations in a timely or competent manner may delay development and commercialization of our product candidates.

We expect to use third parties such as clinical research organizations or the U.S. Army to assist in conduct of our clinical trials. There are numerous alternative sources to provide these services. However, we may face delays outside of our control if these parties do not perform their obligations in a timely or competent fashion or if we are forced to change service providers. This risk is heightened for clinical trials conducted outside of the United States, where it may be more difficult to ensure that clinical trials are conducted in compliance with FDA requirements. Any third-party that we hire to conduct clinical trials may also provide services to our competitors, which could compromise the performance of their obligations to us. If we experience significant delays in the progress of our clinical trials and in our plans to file New Drug

TABLE OF CONTENTS

Applications (NDAs), the commercial prospects for product candidates could be harmed and our ability to generate product revenue would be delayed or prevented.

We will rely on the U.S. Army to conduct our Phase 1 clinical trial, and their failure to perform in a timely manner may significantly delay the AmpliPhage-002 clinical program.

Pursuant to our Collaborative Research and Development Agreement, or CRADA, with the United States Army Medical Research and Materiel Command, or USAMRMC and the Walter Reed Army Institute of Research, or WRAIR, we expect to utilize US Army human resources and facilities to conduct our planned Phase 1 clinical trial of AmpliPhage-002. Due to recent outbreaks of the Ebola virus, the Army has diverted significant resources to studying this potential epidemic. As a result, the U.S. Army has advised the Company there may be a delay in initiating the planned Phase 1 AmpliPhage-002 study, which may significantly impact our ability to conduct this clinical trial prior to the first half of 2015.

We must manage a geographically dispersed organization.

While we are a small company, we currently have operations in the United States, Australia, United Kingdom and Slovenia. In the future, we may also locate facilities in other locations based on proximity to personnel with the expertise needed to research, develop and manufacture phage-based therapeutics, costs of operations or other factors. Managing our organization across multiple locations and multiple time zones may reduce our efficiency, increase our expenses and increase the risk of operational difficulties in the execution of our plans.

Risks Related to Our Intellectual Property

We are dependent on patents and proprietary technology. If we fail to adequately protect this intellectual property or if we otherwise do not have exclusivity for the marketing of our products, our ability to commercialize products could suffer.

Our commercial success will depend in part on our ability to obtain and maintain patent protection sufficient to prevent others from marketing our product candidates, as well as to defend and enforce these patents against infringement and to operate without infringing the proprietary rights of others. Protection of our product candidates from unauthorized use by third parties will depend on having valid and enforceable patents cover our product candidates or their manufacture or use, or having effective trade secret protection. If our patent applications do not result in issued patents, or if our patents are found to be invalid, we will lose the ability to exclude others from making, using or selling the inventions claimed therein. We have a limited number of patents and pending patent applications.

The patent positions of biotechnology companies can be uncertain and involve complex legal and factual questions. This is due to inconsistent application of policy and changes in policy relating to examination and enforcement of biotechnology patents to date on a global scale. The laws of some countries may not protect intellectual property rights to the same extent as the laws of countries having well-established patent systems, and those countries may lack adequate rules and procedures for defending our intellectual property rights. Also, changes in either patent laws or in interpretations of patent laws may diminish the value of our intellectual property. We are not able to guarantee that all

of our patent applications will result in the issuance of patents and we cannot predict the breadth of claims that may be allowed in our patent applications or in the patent applications we may license from others.

The degree of future protection for our proprietary rights is uncertain because legal means afford only limited protection and may not adequately protect our rights or permit us to gain or keep our competitive advantage. For example:

we might not have been the first to make the inventions covered by each of our pending patent applications and issued patents, and we may have to participate in expensive and protracted interference proceedings to determine priority of invention;

we might not have been the first to file patent applications for these inventions;

others may independently develop similar or alternative product candidates to any of our product candidates that fall outside the scope of our patents;

37

TABLE OF CONTENTS

our pending patent applications may not result in issued patents;
our issued patents may not provide a basis for commercially viable products or may not provide us with any competitive advantages or may be challenged by third parties;
others may design around our patent claims to produce competitive products that fall outside the scope of our patents;
we may not develop additional patentable proprietary technologies related to our product candidates; and
we are dependent upon the diligence of our appointed agents in national jurisdictions, acting for and on our behalf, which control the prosecution of pending domestic and foreign patent applications and maintain granted domestic and foreign patents.

An issued patent does not guarantee us the right to practice the patented technology or commercialize the patented product. Third parties may have blocking patents that could be used to prevent us from commercializing our patented products and practicing our patented technology. Our issued patents and those that may be issued in the future may be challenged, invalidated or circumvented, which could limit our ability to prevent competitors from marketing the same or related product candidates or could limit the length of the term of patent protection of our product candidates.

Moreover, because of the extensive time required for development, testing and regulatory review of a potential product, it is possible that, before any of our product candidates can be commercialized, any related patent may expire or remain in force for only a short period following commercialization, thereby reducing any advantage of the patent.

Patent term extensions may not be available for these patents.

We rely on trade secrets and other forms of non-patent intellectual property protection. If we are unable to protect our trade secrets, other companies may be able to compete more effectively against us.

We rely on trade secrets to protect certain aspects of our technology, including our proprietary processes for manufacturing and purifying bacteriophages. Trade secrets are difficult to protect, especially in the pharmaceutical industry, where much of the information about a product must be made public during the regulatory approval process.

Although we use reasonable efforts to protect our trade secrets, our employees, consultants, contractors, outside scientific collaborators and other advisors may unintentionally or willfully disclose our information to competitors.

Enforcing a claim that a third party illegally obtained and is using our trade secret information is expensive and time-consuming, and the outcome is unpredictable. In addition, courts outside the United States may be less willing to or may not protect trade secrets. Moreover, our competitors may independently develop equivalent knowledge, methods and know-how.

If we are sued for infringing intellectual property rights of third parties or if we are forced to engage in an interference proceeding, it will be costly and time-consuming, and an unfavorable outcome in that litigation or interference would have a material adverse effect on our business.

Our ability to commercialize our product candidates depends on our ability to develop, manufacture, market and sell our product candidates without infringing the proprietary rights of third parties. Numerous United States and foreign patents and patent applications, which are owned by third parties, exist in the general field of anti-infective products or in fields that otherwise may relate to our product candidates. If we are shown to infringe, we could be enjoined from use or sale of the claimed invention if we are unable to prove that the patent is invalid. In addition, because patent applications can take many years to issue, there may be currently pending patent applications, unknown to us, which may later result in issued patents that our product candidates may infringe, or which may trigger an interference proceeding regarding one of our owned or licensed patents or applications. There could also be existing patents of which we are not aware that our product candidates may inadvertently infringe or which may become involved in an

We rely on trade secrets and other forms of non-patent intellectual property protection. If we are unable to protect o

interference proceeding.

The biotechnology and pharmaceutical industries are characterized by the existence of a large number of patents and frequent litigation based on allegations of patent infringement. For so long as our product candidates are in clinical trials, we believe our clinical activities fall within the scope of the exemptions provided by 35 U.S.C. Section 271(e) in the United States, which exempts from patent infringement liability

TABLE OF CONTENTS

activities reasonably related to the development and submission of information to the FDA. As our clinical investigational drug product candidates progress toward commercialization, the possibility of a patent infringement claim against us increases. While we attempt to ensure that our active clinical investigational drugs and the methods we employ to manufacture them, as well as the methods for their use we intend to promote, do not infringe other parties' patents and other proprietary rights, we cannot be certain they do not, and competitors or other parties may assert that we infringe their proprietary rights in any event.

We may be exposed to future litigation based on claims that our product candidates, or the methods we employ to manufacture them, or the uses for which we intend to promote them, infringe the intellectual property rights of others. Our ability to manufacture and commercialize our product candidates may depend on our ability to demonstrate that the manufacturing processes we employ and the use of our product candidates do not infringe third-party patents. If third-party patents were found to cover our product candidates or their use or manufacture, we could be required to pay damages or be enjoined and therefore unable to commercialize our product candidates, unless we obtained a license. A license may not be available to us on acceptable terms, if at all.

Risks Related to Our Industry

If our competitors are able to develop and market products that are more effective, safer or more affordable than ours, or obtain marketing approval before we do, our commercial opportunities may be limited.

Competition in the biotechnology and pharmaceutical industries is intense and continues to increase. Some companies that are larger and have significantly more resources than we do are aggressively pursuing antibacterial development programs, including traditional therapies and therapies with novel mechanisms of action. In addition, other companies are developing phage-based products for non-therapeutic uses, and may elect to use their expertise in phage development and manufacturing to try to develop products that would compete with ours.

We also face potential competition from academic institutions, government agencies and private and public research institutions engaged in the discovery and development of drugs and therapies. Many of our competitors have significantly greater financial resources and expertise in research and development, preclinical testing, conducting clinical trials, obtaining regulatory approvals, manufacturing, sales and marketing than we do. Smaller or early-stage companies may also prove to be significant competitors, particularly through collaborative arrangements with large and established pharmaceutical companies.

Our competitors may succeed in developing products that are more effective, have fewer side effects and are safer or more affordable than our product candidates, which would render our product candidates less competitive or noncompetitive. These competitors also compete with us to recruit and retain qualified scientific and management personnel, establish clinical trial sites and patient registration for clinical trials, as well as to acquire technologies and technology licenses complementary to our programs or advantageous to our business. Moreover, competitors that are able to achieve patent protection, obtain regulatory approvals and commence commercial sales of their products before we do, and competitors that have already done so, may enjoy a significant competitive advantage.

In July 2012, the Food and Drug Administration Safety and Innovation Act was passed, which included the Generating Antibiotics Incentives Now Act, or the GAIN Act. The GAIN Act is intended to provide incentives for the development of new, qualified infectious disease products. These incentives may result in more competition in the market for new antibiotics, and may cause pharmaceutical and biotechnology companies with more resources than we

have to shift their efforts towards the development of products that could be competitive with our product candidates.

TABLE OF CONTENTS

There is a substantial risk of product liability claims in our business. If we do not obtain sufficient liability insurance, a product liability claim could result in substantial liabilities.

Our business exposes us to significant potential product liability risks that are inherent in the development, manufacturing and marketing of human therapeutic products. Regardless of merit or eventual outcome, product liability claims may result in:

delay or failure to complete our clinical trials;
withdrawal of clinical trial participants;
decreased demand for our product candidates;
injury to our reputation;
litigation costs;
substantial monetary awards against us; and
diversion of management or other resources from key aspects of our operations.

If we succeed in marketing products, product liability claims could result in an FDA investigation of the safety or efficacy of our products, our manufacturing processes and facilities or our marketing programs. An FDA investigation could also potentially lead to a recall of our products or more serious enforcement actions, or limitations on the indications, for which they may be used, or suspension or withdrawal of approval.

We have product liability insurance that covers our clinical trials up to a \$10 million annual aggregate limit. We intend to expand our insurance coverage to include the sale of commercial products if marketing approval is obtained for our product candidates or any other compound that we may develop. However, insurance coverage is expensive and we may not be able to maintain insurance coverage at a reasonable cost or at all, and the insurance coverage that we obtain may not be adequate to cover potential claims or losses.

Even if we receive regulatory approval to market our product candidates, the market may not be receptive to our product candidates upon their commercial introduction, which would negatively affect our ability to achieve profitability.

Our product candidates may not gain market acceptance among physicians, patients, healthcare payors and the medical community. The degree of market acceptance of any approved products will depend on a number of factors, including:

the effectiveness of the product;
the prevalence and severity of any side effects;
potential advantages or disadvantages over alternative treatments;
relative convenience and ease of administration;
the strength of marketing and distribution support;
the price of the product, both in absolute terms and relative to alternative treatments; and
sufficient third-party coverage or reimbursement.

If our product candidates receive regulatory approval but do not achieve an adequate level of acceptance by physicians, healthcare payors and patients, we may not generate product revenues sufficient to attain profitability.

If third-party payors do not adequately reimburse patients for any of our product candidates, if approved for marketing, we may not be successful in selling them.

Our ability to commercialize any products successfully will depend in part on the extent to which reimbursement will be available from governmental and other third-party payors, both in the United States and

TABLE OF CONTENTS

in foreign markets. Even if we succeed in bringing one or more products to the market, the amount reimbursed for our products may be insufficient to allow us to compete effectively and could adversely affect our profitability.

Reimbursement by a governmental and other third-party payor may depend upon a number of factors, including a governmental or other third-party payor's determination that use of a product is:

a covered benefit under its health plan;
safe, effective and medically necessary;
appropriate for the specific patient;
cost-effective; and
neither experimental nor investigational.

Obtaining reimbursement approval for a product from each third-party and governmental payor is a time-consuming and costly process that could require us to provide supporting scientific, clinical and cost-effectiveness data for the use of our products to each payor. We may not be able to provide data sufficient to obtain reimbursement.

Eligibility for coverage does not imply that any drug product will be reimbursed in all cases or at a rate that allows us to make a profit. Interim payments for new products, if applicable, may also not be sufficient to cover our costs and may not become permanent. Reimbursement rates may vary according to the use of the drug and the clinical setting in which it is used, may be based on payments allowed for lower-cost drugs that are already reimbursed, may be incorporated into existing payments for other products or services and may reflect budgetary constraints and/or Medicare or Medicaid data used to calculate these rates. Net prices for products also may be reduced by mandatory discounts or rebates required by government healthcare programs or by any future relaxation of laws that restrict imports of certain medical products from countries where they may be sold at lower prices than in the United States.

The healthcare industry is experiencing a trend toward containing or reducing costs through various means, including lowering reimbursement rates, limiting therapeutic class coverage and negotiating reduced payment schedules with service providers for drug products. The Medicare Prescription Drug, Improvement and Modernization Act of 2003, or MMA, became law in November 2003 and created a broader prescription drug benefit for Medicare beneficiaries.

The MMA also contains provisions intended to reduce or eliminate delays in the introduction of generic drug competition at the end of patent or non-patent market exclusivity. The impact of the MMA on drug prices and new drug utilization over the next several years is unknown. The MMA also made adjustments to the physician fee schedule and the measure by which prescription drugs are presently paid, changing from Average Wholesale Price to Average Sales Price. The effects of these changes are unknown but may include decreased utilization of new medicines in physician prescribing patterns, and further pressure on drug company sponsors to provide discount programs and reimbursement support programs. There have been, and we expect that there will continue to be, federal and state proposals to constrain expenditures for medical products and services, which may affect reimbursement levels for our future products. In addition, the Centers for Medicare & Medicaid Services frequently change product descriptors, coverage policies, product and service codes, payment methodologies and reimbursement values. Third-party payors often follow Medicare coverage policy and payment limitations in setting their own reimbursement rates and may have sufficient market power to demand significant price reductions.

Foreign governments tend to impose strict price controls, which may adversely affect our future profitability.

In some foreign countries, particularly in the European Union, prescription drug pricing is subject to governmental control. In these countries, pricing negotiations with governmental authorities can take considerable time after the receipt of marketing approval for a product. To obtain reimbursement or pricing approval in some countries, we may

be required to conduct a clinical trial that compares the cost-effectiveness of our product candidate to other available therapies. If reimbursement of our products is unavailable or limited in scope or amount, or if pricing is set at unsatisfactory levels, our profitability will be negatively affected.

TABLE OF CONTENTS

We may incur significant costs complying with environmental laws and regulations, and failure to comply with these laws and regulations could expose us to significant liabilities.

Our research and development activities use biological and hazardous materials that are dangerous to human health and safety or the environment. We are subject to a variety of federal, state and local laws and regulations governing the use, generation, manufacture, storage, handling and disposal of these materials and wastes resulting from these materials. We are also subject to regulation by the Occupational Safety and Health Administration, or OSHA, state and federal environmental protection agencies and to regulation under the Toxic Substances Control Act. OSHA, state governments or federal Environmental Protection Agency, or EPA, may adopt regulations that may affect our research and development programs. We are unable to predict whether any agency will adopt any regulations that could have a material adverse effect on our operations. We have incurred, and will continue to incur, capital and operating expenditures and other costs in the ordinary course of our business in complying with these laws and regulations.

Although we believe our safety procedures for handling and disposing of these materials comply with federal, state and local laws and regulations, we cannot entirely eliminate the risk of accidental injury or contamination from the use, storage, handling or disposal of hazardous materials. In the event of contamination or injury, we could be held liable for any resulting damages, and any liability could significantly exceed our insurance coverage.

Risks Related to Our Common Stock

The price of our common stock has been and may continue to be volatile.

The stock markets in general, the markets for biotechnology stocks and, in particular, the stock price of our common stock, have experienced extreme volatility. Although we intend to apply to be listed on the NYSE MKT, our stock is currently quoted on the OTCQB market. The market for our common shares is characterized by significant price volatility when compared to the shares of larger, more established companies that trade on a national securities exchange and have large public floats, and we expect that our share price will continue to be more volatile than the shares of such larger, more established companies for the indefinite future, even if we are listed on the NYSE MKT. The volatility in our share price is attributable to a number of factors. First, our common shares are, compared to the shares of such larger, more established companies, sporadically and thinly traded. As a consequence of this limited liquidity, the trading of relatively small quantities of shares by our stockholders may disproportionately influence the price of those shares in either direction. The price for our shares could, for example, decline precipitously in the event that a large number of our common shares are sold on the market without commensurate demand. Secondly, we are a speculative or risky investment due to the early stage of our drug development programs and our lack of profits to date, and uncertainty of future market acceptance for our potential products. As a consequence of this enhanced risk, more risk-averse investors may, under the fear of losing all or most of their investment in the event of negative news or lack of progress, be more inclined to sell their shares on the market more quickly and at greater discounts than would be the case with the stock of a larger, more established company that trades on a national securities exchange and has a large public float. Many of these factors are beyond our control and may decrease the market price of our common shares, regardless of our operating performance. We cannot make any predictions or projections as to what the prevailing market price for our common shares will be at any time, including as to whether our common shares will sustain their current market prices, or as to what effect that the sale of shares or the availability of common shares for sale at any time will have on the prevailing market price.

Price declines in our common stock could result from general market and economic conditions and a variety of other factors, including:

adverse results or delays in our clinical trials;
adverse actions taken by regulatory agencies with respect to our product candidates, clinical trials or the manufacturing processes of our product candidates;
announcements of technological innovations, patents or new products by our competitors;
regulatory developments in the United States and foreign countries;

42

TABLE OF CONTENTS

any lawsuit involving us or our product candidates;
announcements concerning our competitors, or the biotechnology or pharmaceutical industries in general;
developments concerning any strategic alliances or acquisitions we may enter into;
actual or anticipated variations in our operating results;
changes in recommendations by securities analysts or lack of analyst coverage;
deviations in our operating results from the estimates of analysts;
sales of our common stock by our executive officers, directors and five percent stockholders or sales of substantial amounts of common stock; and
loss of any of our key scientific or management personnel.

In the past, following periods of volatility in the market price of a particular company's securities, litigation has often been brought against that company. Any such lawsuit could consume resources and management time and attention, which could adversely affect our business.

You may incur substantial dilution as a result of future offerings of our securities.

You may incur substantial dilution as a result of future offerings by us of debt or equity securities. Since inception, we have funded our operations primarily through issuances of equity and debt. On June 26, 2013, we completed a private placement of convertible preferred stock and warrants to purchase common stock with gross proceeds of approximately \$7.0 million through the sale of shares of our newly-created Series B Convertible Preferred Stock. As part of the same transaction, approximately \$5.5 million in outstanding convertible notes were converted into shares of Series B Convertible Preferred Stock and warrants to purchase common stock. On July 15, 2013, we completed a second closing in which we converted approximately \$0.8 million of outstanding convertible notes into Series B Convertible Preferred Stock and warrants to purchase common stock. The financing was led by life-sciences investors RA Capital Management and Third Security, LLC, with participation from BioScience Managers Pty Ltd.

Under the terms of the financing, we issued an aggregate amount of approximately 10.0 million shares of Series B Convertible Preferred Stock for an aggregate purchase price of approximately \$13.3 million (including the conversion of approximately \$6.3 million of outstanding convertible notes). Each share of Series B Convertible Preferred Stock is convertible into 10 shares of common stock and accrues dividends at the rate of 10% per year. Additionally, we issued warrants to purchase an aggregate of up to approximately 25.0 million shares of common stock at an exercise price of \$0.14 per share.

In addition, in December 2013, we completed a private placement in which we issued 72,007,000 shares of the Company's common stock at a price per share of \$0.25, and, in connection with the private placement, issued warrants to purchase 4,320,420 shares of common stock at an exercise price of \$0.25 per share to the placement agents.

A significant number of shares of our common stock are subject to issuance upon exercise of outstanding warrants and options, which upon such exercise would result in dilution to our security holders.

As of October 20, 2014, we have outstanding warrants to purchase 38,890,451 shares of our common stock at an average exercise price of \$0.15 per share, and outstanding options to purchase 25,555,000 shares of our common stock at an average exercise price of \$0.19 per share. The exercise price and/or the number of shares of common stock issuable upon exercise of the warrants may be adjusted in certain circumstances, including certain issuances of securities at a price equal to or less than the then current exercise price, subdivisions and stock splits, stock dividends,

combinations, reorganizations, reclassifications, consolidations, mergers or sales of properties and assets and upon the issuance of certain assets or securities to holders of our common stock, as applicable. Although we cannot determine at this time which of these warrants will ultimately be exercised, it is reasonable to assume that such warrants will be exercised only if the exercise price is below the market price of our common stock. To the extent the warrants are exercised, additional

TABLE OF CONTENTS

shares of our common stock will be issued that will be eligible for resale in the public market, which will result in dilution to our security holders. The issuance of additional securities could also have an adverse effect on the market price of our common stock.

If our officers, directors and largest stockholders choose to act together, they may be able to control our management and operations, acting in their best interests and not necessarily those of other stockholders.

As of October 20, 2014, our officers and directors beneficially owned approximately 17.18% of our outstanding common stock. As a result, these stockholders, acting together, may be able to significantly influence all matters requiring approval by our stockholders, including the election of directors and the approval of mergers or other business combination transactions. The interests of this group of stockholders may not always coincide with the interests of other stockholders, and they may act in a manner that advances their best interests and not necessarily those of other stockholders.

Our (i) current articles of incorporation and bylaws, (ii) our intended certificate of incorporation and bylaws upon reincorporation in Delaware, (iii) Washington law and, (iv) upon reincorporation, Delaware law contains provisions that could discourage another company from acquiring us and may prevent attempts by our stockholders to replace or remove our current management.

Provisions of (i) Washington law, where we are incorporated, (ii) Delaware law, where we intend to reincorporate, (iii) our current articles of incorporation and bylaws and (iv) our intended certificate of incorporation and bylaws upon our reincorporation in Delaware may discourage, delay or prevent a merger or acquisition that stockholders may consider favorable, including transactions in which you might otherwise receive a premium for your shares. In addition, these provisions may frustrate or prevent any attempts by our stockholders to replace or remove our current management by making it more difficult for stockholders to replace or remove our board of directors. These provisions include:

authorizing the issuance of blank check preferred stock without any need for action by stockholders;
providing for a classified board of directors with staggered terms;
requiring supermajority stockholder voting to effect certain amendments to (i) our current articles of incorporation and bylaws and (ii) our intended certificate of incorporation and bylaws upon reincorporation in Delaware;
eliminating the ability of stockholders to call special meetings of stockholders;
prohibiting stockholder action by written consent; and
establishing advance notice requirements for nominations for election to our board of directors or for proposing matters that can be acted on by stockholders at stockholder meetings.

In addition, because we are incorporated in Washington, we are governed by the provisions of Chapter 23B.19 of the Washington Business Corporation Act, or the WBCA, which, among other things, restricts the ability of shareholders owning ten percent (10%) or more of our outstanding voting stock from merging or combining with us. Because we are reincorporating in Delaware, we will then be governed by the provisions of Section 203 of the Delaware General Corporation Law, or the DGCL. These provisions may prohibit large stockholders, in particular those owning fifteen percent (15%) or more of our outstanding voting stock, from merging or combining with us. These provisions could discourage potential acquisition attempts and could reduce the price that investors might be willing to pay for shares

of our common stock in the future and result in the market price being lower than it would without these provisions.

Although we believe these provisions collectively provide for an opportunity to receive higher bids by requiring potential acquirors to negotiate with our board of directors, they would apply even if an offer may be considered beneficial by some shareholders. In addition, these provisions may frustrate or prevent any attempts by our shareholders to replace or remove our current management by making it difficult for shareholders to replace members of our board of directors, which is responsible for appointing the members of our management.

TABLE OF CONTENTS

We have never paid dividends on our common stock, and we do not anticipate paying any cash dividends in the foreseeable future.

We have never declared or paid cash dividends on our common stock. We do not anticipate paying any cash dividends on our common stock in the foreseeable future. We currently intend to retain all available funds and any future earnings to fund the development and growth of our business. As a result, capital appreciation, if any, of our common stock will be our stockholders' sole source of gain for the foreseeable future.

Maintaining and improving our financial controls and the requirements of being a public company may strain our resources, divert management's attention and affect our ability to attract and retain qualified board members.

As a public company, we are subject to the reporting requirements of the Exchange Act, the Sarbanes-Oxley Act and, if our common stock is listed on an exchange (such as the NYSE MKT), the rules of such exchange. The requirements of these rules and regulations will increase our legal and financial compliance costs, make some activities more difficult, time-consuming or costly and may also place undue strain on our personnel, systems and resources. The Exchange Act will require, among other things, that we file annual, quarterly and current reports with respect to our business and financial condition.

The Sarbanes-Oxley Act will require, among other things, that we maintain effective disclosure controls and procedures and internal control over financial reporting. Ensuring that we have adequate internal financial and accounting controls and procedures in place is a costly and time-consuming effort that needs to be re-evaluated frequently.

We currently do not have an internal audit group, and we may need to hire additional accounting and financial staff with appropriate public company experience and technical accounting knowledge. Implementing any appropriate changes to our internal controls may require specific compliance training for our directors, officers and employees, entail substantial costs to modify our existing accounting systems, and take a significant period of time to complete. Such changes may not, however, be effective in maintaining the adequacy of our internal controls, and any failure to maintain that adequacy, or consequent inability to produce accurate financial statements on a timely basis, could increase our operating costs and could materially impair our ability to operate our business. Moreover, effective internal controls are necessary for us to produce reliable financial reports and are important to help prevent fraud.

In addition, our independent registered public accounting firm did not perform an evaluation of our internal control over financial reporting as of December 31, 2013, December 31, 2012 or December 31, 2011 in accordance with the provisions of the Sarbanes-Oxley Act because no such evaluation was required. Although not required, our management did review our internal controls for the year ended December 31, 2013 and identified material weakness in the area of complex and non-routine transactions. If we are unable to successfully remediate any significant deficiency or material weakness in our internal control over financial reporting, identify any additional significant deficiencies or material weaknesses that may exist, or satisfy the requirements of the Sarbanes-Oxley Act, the accuracy and timing of our financial reporting may be adversely affected, we may be unable to maintain compliance with securities law requirements regarding timely filing of periodic reports in addition to applicable stock exchange listing requirements, and our stock price may decline materially as a result.

In accordance with NYSE MKT rules, we will be required to maintain a majority independent board of directors. We also expect that the various rules and regulations applicable to public companies will make it more difficult and more

We have never paid dividends on our common stock, and we do not anticipate paying any cash dividends on the for

expensive for us to maintain directors' and officers' liability insurance, and we may be required to accept reduced coverage or incur substantially higher costs to maintain coverage. If we are unable to maintain adequate directors' and officers' insurance, our ability to recruit and retain qualified directors, especially those directors who may be deemed independent for purposes of NYSE MKT rules, and officers will be significantly curtailed.

Compliance with these reporting rules, Sarbanes-Oxley Act and NYSE MKT requirements may require us to build out our accounting and finance staff. We may need to expand our accounting and financing staff, and our failure to adequately do so would harm our ability to comply with the requirements listed above.

TABLE OF CONTENTS

If securities or industry analysts do not publish research or publish unfavorable research about our business, our stock price and trading volume could decline.

The trading market for our common stock will depend in part on the research and reports that securities or industry analysts publish about us or our business. We currently have one security analyst and may never obtain additional research coverage by other securities and industry analysts. If no additional securities or industry analysts commence coverage of our company, the trading price for our stock would be negatively impacted. If we obtain additional securities or industry analyst coverage and if one or more of the analysts who covers us downgrades our stock or publishes inaccurate or unfavorable research about our business, our stock price would likely decline. If one or more of these analysts ceases coverage of us or fails to publish reports on us regularly, demand for our stock could decrease, which could cause our stock price and trading volume to decline.

Future sales of our common stock or securities convertible into our common stock may depress our stock price.

Sales of a substantial number of shares of our common stock or securities convertible into our common stock in the public market could occur at any time. These sales, or the perception in the market that the holders of a large number of shares intend to sell shares, could reduce the market price of our common stock. Moreover, we also intend to register all shares of common stock that we may issue under our equity compensation plans. Once we register these shares, they can be freely sold in the public market upon issuance, subject to the lock-up agreements contained in the relevant agreements.

If a large number of shares of our common stock or securities convertible into our common stock are sold in the public market after they become eligible for sale, the sales could reduce the trading price of our common stock and impede our ability to raise future capital.

Trading of our stock is restricted by the SEC's penny stock regulations and certain FINRA rules, which may limit a stockholder's ability to buy and sell our common stock.

Our securities are covered by certain penny stock rules, which impose additional sales practice requirements on broker-dealers who sell low-priced securities to persons other than established customers and accredited investors. For transactions covered by these rules, a broker-dealer must make a special suitability determination for the purchaser and have received the purchaser's written consent to the transaction prior to sale, among other things. In addition, the penny stock rules require a broker-dealer, before effecting a transaction in a penny stock not otherwise exempt from the rules, to deliver a standardized risk disclosure document prepared by the SEC that provides information about penny stocks and the nature and level of risks in the penny stock market. The broker-dealer also must provide the customer with current bid and offer quotations for the penny stock, the compensation of the broker-dealer and its salesperson in the transaction, and monthly account statements showing the market value of each penny stock held in the customer's account. The bid and offer quotations, and the broker-dealer and salesperson compensation information, must be given to the customer orally or in writing before effecting the transaction, and must be given to the customer in writing before or with the customer's confirmation. These rules may affect the ability of broker-dealers and holders to sell our common stock and may negatively impact the level of trading activity for our common stock. To the extent our common stock remains subject to the penny stock regulations, such regulations may discourage investor interest in and adversely affect the market liquidity of our common stock.

If securities or industry analysts do not publish research or publish unfavorable research about our business, our stock price and trading volume could decline.

The Financial Industry Regulatory Authority, or FINRA, has adopted rules that require that in recommending an investment to a customer, a broker-dealer must have reasonable grounds for believing that the investment is suitable for that customer. Prior to recommending speculative low priced securities to their non-institutional customers, broker-dealers must make reasonable efforts to obtain information about the customer's financial status, tax status, investment objectives and other information. Under interpretations of these rules, FINRA believes that there is a high probability that speculative low priced securities will not be suitable for at least some customers. FINRA requirements make it more difficult for broker-dealers to recommend that their customers buy our common stock, which may limit your ability to buy and sell our stock and have an adverse effect on the market for our shares.

TABLE OF CONTENTS

We are an emerging growth company and we cannot be certain if the reduced disclosure requirements applicable to emerging growth companies will make our common stock less attractive to investors.

We are an emerging growth company, as defined under the JOBS Act. For so long as we are an emerging growth company, we intend to take advantage of certain exemptions from reporting requirements that are applicable to other public companies that are not emerging growth companies including, but not limited to, compliance with the auditor attestation requirements of Section 404 of the Sarbanes-Oxley Act, reduced disclosure obligations regarding executive compensation in our periodic reports and proxy statements, and exemptions from the requirements of holding a nonbinding advisory vote on executive compensation and stockholder approval of any golden parachute payments not previously approved.

We could be an emerging growth company for up to five years, although we may lose such status earlier, depending on the occurrence of certain events. We will remain an emerging growth company until the earliest to occur of (i) the last day of the fiscal year (a) following the fifth anniversary of our initial public offering, (b) in which we have total annual gross revenue of at least \$1.0 billion or (c) in which we are deemed to be a large accelerated filer under the Securities Exchange Act of 1934, which we refer to as the Exchange Act, which means that the market value of our common stock that is held by non-affiliates exceeds \$700 million as of the prior June 30, and (ii) the date on which we have issued more than \$1.0 billion in non-convertible debt securities during the prior three-year period.

We cannot predict if investors will find our common stock less attractive or our company less comparable to certain other public companies because we will rely on these exemptions. If some investors find our common stock less attractive as a result, there may be a less active trading market for our common stock and our stock price may be more volatile.

Under the JOBS Act, emerging growth companies can delay adopting new or revised accounting standards issued subsequent to the enactment of the JOBS Act until such time as those standards apply to private companies. We have irrevocably elected not to avail ourselves of this exemption from new or revised accounting standards, and, therefore, will be subject to the same new or revised accounting standards as other public companies that are not emerging growth companies.

Item 2. Financial Information.

Management's Discussion and Analysis of Financial Condition and Results of Operations

You should read the following discussion and analysis of our financial condition and results of operations in conjunction with the financial statements and the related notes contained elsewhere in this registration statement. Some of the information contained in this discussion and analysis or set forth elsewhere in this registration statement, including information with respect to our plans and strategy for our business and related financing, includes forward-looking statements that involve risks and uncertainties. See Special Note Regarding Forward-Looking Statements. Our actual results may differ substantially from those referred to herein due to a number of factors, including but not limited to risks described in the section entitled Risk Factors and elsewhere in this registration statement.

Restatement

As discussed in the Explanatory Note Regarding Restatement; Note 14 (Correction of Errors) to Notes to Consolidated Financial Statements Year Ended December 31, 2013 included in this Registration Statement on Form 10, we are amending and restating our audited consolidated financial statements and related disclosures for the years ended December 31, 2013, December 31, 2012 and December 31, 2011 and for the period ended June 30, 2014.

The following discussion and analysis of our financial condition and results of operations incorporates the restated amounts. For this reason, the data set forth in this section may not be comparable to discussion and data in our previously filed Registration Statements on Form 10 or Form S-1 for the fiscal years ended December 31, 2013, December 31, 2012 and for the period ended June 30, 2014.

Overview

AmpliPhi Biosciences is a biotechnology company focused on the discovery, development and commercialization of novel phage therapeutics. Our proprietary pipeline is based on the use of bacteriophages, a family of viruses that infect only bacteria. Phages have powerful and highly selective mechanisms of action that permit them to target and kill specific bacterial pathogens, including the so-called multi-drug-resistant (MDR) or Superbug strains.

We are combining our proprietary approach and expertise in identifying, characterizing and developing naturally occurring bacteriophages with that of our collaboration partners in bacteriophage biology, drug engineering, development and manufacturing, to develop second-generation bacteriophage products. We believe that phages represent a promising means to treat bacterial infections, especially those that have developed resistance to current medicines.

Our lead program is AmpliPhage-002, for the treatment of methicillin-resistant S. aureus (MRSA) infections. We have two other product candidates in development: AmpliPhage-001 for the treatment of P. Aeruginosa lung infections in CF patients and AmpliPhage-004 for the treatment of C. difficile infections.

We have incurred net losses since our inception. Our operations to date have been limited to research and development and raising capital. Since November 2010, we have raised approximately \$5.6 million through the sale

and issuance of convertible notes and warrants to purchase common stock. In June and July of 2013, we completed a private placement of shares of Series B Convertible Preferred Stock and warrants to purchase common stock, with proceeds to the Company of approximately \$7.0 million. At the same time we converted approximately \$6.3 million in outstanding convertible notes to Series B Convertible Preferred Stock. In December 2013, we completed a private placement of shares of common stock, with gross proceeds of approximately \$18 million, prior to commissions. To date, we have not generated any meaningful revenue and have primarily financed our operations through the sale and issuance of convertible notes and the private placement of our equity securities. As of September 30, 2014, we had an accumulated deficit of \$355.3 million. We recorded annual net losses of \$57.7 million in 2013 and \$1.1 million in 2012. We anticipate that a substantial portion of our capital resources and efforts in the foreseeable future will be focused on completing the development and obtaining regulatory approval of our product candidates.

TABLE OF CONTENTS

We expect our research and development expenses to expand as we increase our development activities and commence clinical trials to pursue regulatory approval for our product candidates. We also expect to incur additional expenses associated with operating as a public company. As a result, we expect to continue to incur significant and increasing operating losses at least for the next several years. We do not expect to generate product revenue unless and until we successfully complete development and obtain marketing approval for at least one of our product candidates.

We currently expect to use our existing cash and cash equivalents for the continued research and development of our product candidates and for working capital and other general corporate purposes.

We may also use a portion of our cash and cash equivalents for the potential acquisition of, or investment in, product candidates, technologies, formulations or companies that complement our business, although we have no current understandings, commitments or agreements to do so. We expect that our current cash and cash equivalents will not be sufficient to enable us to complete all necessary development of any potential product candidates. Accordingly, we will be required to obtain further funding through other public offerings, debt financing, collaboration and licensing arrangements or other sources. Adequate additional funding may not be available to us on acceptable terms, or at all. If we are unable to raise capital when needed or on attractive terms, we would be forced to delay, reduce or eliminate our research and development programs.

Critical Accounting Policies and Use of Estimates

Our management's discussion and analysis of our financial condition and results of operations are based on our consolidated financial statements, which have been prepared in accordance with U.S. generally accepted accounting principles. The preparation of these consolidated financial statements requires us to make estimates and judgments that affect the reported amounts of assets, liabilities, and expenses and the disclosure of contingent assets and liabilities in our consolidated financial statements. On an ongoing basis, we evaluate our estimates and judgments, including those related to accrued expenses and stock-based compensation. We base our estimates on historical experience, known trends and events, and various other factors that are believed to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates under different assumptions or conditions.

Goodwill

Costs of investments in purchased companies in excess of the underlying fair value of net assets at the date of acquisition are recorded as goodwill and assessed annually for impairment. If considered impaired, goodwill will be written down to fair value and a corresponding impairment loss recognized. As of December 31, 2013, we have recorded goodwill of \$4.3 million due to the 2012 acquisition of SPH's know-how and phage libraries and the 2011 acquisition of Biocontrol's patents and phage library. In management's opinion, no goodwill has been impaired as of December 31, 2013.

In Process Research and Development Costs

In Process Research & Development (IPR&D) assets represent capitalized incomplete research projects that the Company acquired through business combinations. Such assets are initially measured at their acquisition date fair values. The fair value of the research projects is recorded as intangible assets on the consolidated balance sheet rather than expensed regardless of whether these assets have an alternative future use. The amounts capitalized are being accounted for as indefinite-lived intangible assets, subject to impairment testing until completion or abandonment of

research and development efforts associated with the projects. Upon successful completion of each project, the Company will make a determination as to the then remaining useful life of the intangible asset and begin amortization. The Company tests its indefinite-lived intangibles, including IPR&D assets, for impairment at least quarterly. As of December 31, 2013, we have recorded IPR&D of \$12.5 million due to the 2012 acquisition of SPH's know-how and phage libraries and the 2011 acquisition of Biocontrol's patents and phage library. In management's opinion, no IPR&D has been impaired as of December 31, 2013.

Stock-Based Compensation Expenses

We account for stock options and restricted stock units related to our Stock Incentive Plans under the provisions of ASC 718, which requires the recognition of the fair value of stock-based compensation. The fair

TABLE OF CONTENTS

value of stock options and restricted stock units was estimated using a Black-Scholes option valuation model. This model requires the input of subjective assumptions in implementing ASC 718, including expected dividend, expected life, expected volatility and forfeiture rate of each award, as well as the prevailing risk-free interest rate and the fair value of the underlying common stock on the date of grant. The fair value of equity-based awards is amortized over the vesting period of the award, and we have elected to use the straight-line method of amortization. Actual results could differ from our assumptions, which may cause us to record adjustments to increase or decrease compensation expense, in future periods. The assumptions used in the Black-Scholes option valuation model for the years ended December 31, 2013 and 2012 are set forth below.

The following are the assumptions for the periods in which we granted stock options:

Expected Dividend: We do not anticipate any dividends.

Expected Life: The expected life represents the period that we expect our stock-based awards to be outstanding. We determine life based on historical experience and vesting schedules of similar awards.

Expected Volatility: Our expected volatility represents the weighted average historical volatility of the shares of our common stock for the most recent four-year and five-year periods.

Risk-Free Interest Rate: We base the risk-free interest rate used on the implied yield currently available on U.S. Treasury zero-coupon issues with an equivalent remaining term. Where the expected term of our stock-based awards does not correspond with the terms for which interest rates are quoted, we perform a straight-line interpolation to determine the rate from the available term maturities.

Forfeiture Rate: We apply an estimated forfeiture rate that is derived from historical forfeited shares. If the actual number of forfeitures differs from our estimates, we may record additional adjustments to compensation expense in future periods.

The weighted-average assumptions used in the Black-Scholes option pricing model to determine the fair value of the stock option grants were as follows:

	Years Ended			
	December 31,			
	2013		2012	
Risk-free interest rate	1.13	%	0.6	%
Expected volatility	160.9	%	172.1	%
Expected term (in years)	4.0		4.0	
Expected dividend yield	0.0	%	0.0	%

Warrant and Preferred Shares Conversion Feature Liability

We account for warrants and the preferred shares conversion feature with anti-dilution (down-round) provisions under the guidance of ASC 815, Derivatives and Hedging and Emerging Issue Task Force Statement 07-5: Determining Whether an Instrument (or Embedded Feature) Is Indexed to an Entity's Own Stock, which require the warrants and the preferred shares conversion feature to be recorded as a liability and adjusted to fair value in each reporting period.

We estimate the fair values of these securities using a Monte Carlo valuation model.

Accounting for Income Taxes

Our income tax policy records the estimated future tax effects of temporary differences between the tax basis of assets and liabilities and amounts reported in the accompanying balance sheets, as well as operating loss and tax credit carry-forwards. We have recorded a full valuation allowance to reduce our deferred tax assets, as based on available

objective evidence; it is more likely than not that the deferred tax assets will not be realized. In the event that we were to determine that we would be able to realize our deferred tax assets in the future, an adjustment to the deferred tax assets would increase net income in the period such determination was made.

None.

JOBS Act

In April 2012, the JOBS Act was signed into law. The JOBS Act contains provisions that, among other things, reduce certain reporting requirements for an emerging growth company. As an emerging growth company, we are electing not to take advantage of the extended transition period afforded by the JOBS Act for the implementation of new or revised accounting standards, and as a result, we will comply with new or revised accounting standards on the relevant dates on which adoption of such standards is required for non-emerging growth companies. Section 107 of the JOBS Act provides that our decision not to take advantage of the extended transition period is irrevocable. In addition, we are in the process of evaluating the benefits of relying on the other exemptions and reduced reporting requirements provided by the JOBS Act. Subject to certain conditions set forth in the JOBS Act, if as an emerging growth company we choose to rely on such exemptions, we may not be required to, among other things, (i) provide an auditor's attestation report on our system of internal controls over financial reporting pursuant to Section 404, (ii) provide all of the compensation disclosure that may be required of non-emerging growth public companies under the Dodd-Frank Wall Street Reform and Consumer Protection Act, (iii) comply with any requirement that may be adopted by the Public Company Accounting Oversight Board regarding a supplement to the auditor's report providing additional information about the audit and the financial statements (auditor discussion and analysis) and (iv) disclose certain executive compensation-related items such as the correlation between executive compensation and performance and comparisons of the Chief Executive Officer's compensation to median employee compensation. These exemptions will apply for a period of five years following the completion of our initial public offering or until we no longer meet the requirements of being an emerging growth company, whichever is earlier.

Results of Operations

Comparison of the Nine Months Ended September, 2014 and 2013

Revenue

We recognized no revenues for the quarter ended September 30, 2014. For the nine month period ending September 30, 2014, we recognized revenues of \$310,000 in revenue from sublicensing arrangements, a decrease from \$333,000 for the same period in 2013, as a result of reduced grant revenue.

Research and Development

Research and development expenses were \$1.8 million for the quarter ended September 30, 2014, up \$0.7 million from the \$1.1 million recorded for the quarter ended September 30, 2013. Research and development expenses were \$4.7 million for the nine month period ended September 30, 2014, compared to \$5.4 million for the nine month period ended September 30, 2013. Research and development costs for the nine month period in 2013 included a \$3.0 million non-cash one-time technology access fee which was incurred in April 2013. Adjusted for this one-time item, research and development expense for the nine months of 2014 represented an increase of \$2.3 million. The increase in

research and development expense for both the three month and nine month periods ended September 30, 2014 were due to an increase in discovery, laboratory, nonclinical testing, research and development collaborations, consulting, and clinical development planning expenses for all of our product candidates.

Adjusted for the one-time non-cash technology access fee incurred in 2013, research and development expenses are expected to increase in 2014 compared to 2013 as we plan to continue investing substantial resources to research and development as we prepare to initiate clinical trials and continue our discovery efforts.

General and Administrative

General and administrative expenses were \$1.6 million for the quarter ended September 30, 2014 compared to \$1.2 million for the quarter ended September 30, 2013. The \$0.4 million increase in general and administrative expense was due primarily to a \$0.3 million accrual for payments to certain shareholders as required by the terms of our Series B Preferred Stock Purchase Agreement.

TABLE OF CONTENTS

General and administrative expenses were \$5.4 million for the nine month period ended September 30, 2014 compared to \$4.8 million for the nine month period ended September 30, 2013. This increase of \$0.6 million was attributable to the accrual of payments to certain shareholders outlined above and higher legal, accounting, and staffing expenses incurred to satisfy our obligations as a public company. Partially offsetting these cost increases were reduced investment fees resulting from the fees incurred in 2013 for our Series B private placement.

We currently expect our general and administrative expenses to increase in 2014 compared to 2013 due to additional costs associated with being a public company.

Severance Charge

The Company recorded a severance charge in the quarter ended September 30, 2014 of \$1.5 million related to severance-period compensation and benefits and stock-based compensation expense related to the acceleration of vested stock options related to the termination of the Company's Chief Executive Officer during the quarter.

Derivative Liabilities

During the quarter ended September 30, 2014, we recognized a gain on derivative liabilities of \$24.3 million related to reductions in the fair value of derivative liabilities for warrants issued in June, July, and December 2013 and the conversion feature of the shares of Series B Preferred Stock issued in June and July 2013. The reduction in fair value was attributable to a decline in the market value of our common stock at September 30, 2014. During the quarter ended September 30, 2013, we recognized a loss on derivative liabilities of \$41.5 million for warrants issued in June 2013 and the conversion feature of the shares of Series B Preferred Stock issued in June 2013.

For the nine month period ended September 30, 2014, we recognized a gain on derivative liabilities of \$34.0 million compared to \$45.6 million loss for the nine month period ended September 30, 2013.

Derivative liabilities are adjusted to fair value each reporting period and are influenced by several factors including the price of the Company's common stock as of the balance sheet date. On September 30, 2014, the price per share of the Company's common stock was \$0.22 per share compared to \$0.50 per share at December 31, 2013.

Income Taxes

We incurred net operating losses for the years ended December 31, 2013 and 2012 and, accordingly, we did not pay any U. S. federal or state income taxes. As of December 31, 2013, we had accumulated approximately \$175.4 million in U.S. and UK operating loss carry-forwards and research tax credit carry-forwards of approximately \$3.7 million. The carry-forwards began to expire in 2012. Our net operating loss carry-forwards are subject to certain limitations on annual utilization as a result of changes in ownership of the Company, as defined by federal and state tax laws.

Net Operating Losses

We have not recorded a benefit from our net operating loss or research credit carry-forwards because we believe that it is uncertain that we will have sufficient income from future operations to realize the carry-forwards prior to their expiration. Accordingly, we have established a 100% valuation allowance against the deferred tax asset arising from the carry-forwards.

Comparison of the Years Ended December 31, 2013 and 2012

Revenue

For the years ended December 31, 2013 and 2012, we recognized \$0.3 million and \$0.7 million in revenue, respectively. For the years ended December 31, 2013 and 2012, we earned \$0.3 million and \$0.6 million of revenue through sublicensing agreements involving our former gene therapy program, respectively. For the year ended December 31, 2012, we also earned \$0.1 million in grant revenue.

Research and Development

Research and development expenses were \$6.5 million for the year ended December 31, 2013, compared to \$1.5 million for the year ended December 31, 2012. The \$5.0 million increase in expenses is due to an

TABLE OF CONTENTS

increase in discovery, laboratory, nonclinical testing, research and development collaborations, consulting and clinical development planning expenses for all of our product candidates.

Research and development expenses are expected to increase in 2014 compared to 2013 as we plan to continue devoting substantial resources to research and development in future periods as we start clinical trials and continue our discovery efforts.

General and Administrative

General and administrative expenses were \$6.3 million for 2013, compared to \$3.2 million for 2012. The \$3.1 million increase is due to \$1.0 million in placement agent fees associated with the June 2013 Series B Preferred Shares placement, \$0.7 million in higher legal expenses due to preparation to become a public company, and \$1.4 million in higher staffing and outside consulting expenses (including non-cash compensation expense related to options granted to Company executives).

We currently expect our general and administrative expenses to increase in 2014 compared to 2013 due to the costs associated with being a public company.

Discontinued Operations

In June 2012, we sold certain assets used in our gene therapy business including process development, quality control, quality assurance, manufacturing and bioanalytical functions for \$3.1 million. In addition to this cash consideration, we may receive a long-term royalty of 1.75% on all product sales. This royalty may be completely canceled at any time by a one-time payment of \$1.8 million.

Interest Income (Expense)

During 2013 and 2012, we issued \$2.0 million and \$1.0 million in convertible notes, respectively. Interest expense in 2013 was \$0.2 million, compared to \$0.3 million for 2012. The decrease was due to the conversion of the convertible notes into Series B Preferred Shares in June and July 2013 and thus eliminating future interest expense.

Income Taxes

We incurred net operating losses for the years ended December 31, 2013 and 2012 and, accordingly, we did not pay any federal or state income taxes. As of December 31, 2013, we had accumulated approximately \$175.4 million in U.S. and UK operating loss carry-forwards and research tax credit carry-forwards of approximately \$3.7 million. The carry-forwards began to expire in 2012. Our net operating loss carry-forwards are subject to certain limitations on annual utilization as a result of changes in ownership of the Company, as defined by federal and state tax laws.

Net Operating Losses

We have not recorded a benefit from our net operating loss or research credit carry-forwards because we believe that it is uncertain that we will have sufficient income from future operations to realize the carry-forwards prior to their expiration. Accordingly, we have established a 100% valuation allowance against the deferred tax asset arising from the carry-forwards.

TABLE OF CONTENTS

Liquidity and Capital Resources

We have incurred net losses since inception through December 31, 2013 of \$378.1 million, of which \$315.5 million was incurred by Targeted Genetics prior to its merger with Biocontrol, and \$6.9 million of which was incurred by Biocontrol. We have not generated any product revenues and do not expect to generate revenue from the sale of product candidates in the near term.

We had cash of \$20.4 million and \$0.9 million at December 31, 2013 and 2012, respectively. Net cash used in operating activities for the years ended December 31, 2013 and 2012 was \$6.3 million and \$4.3 million, respectively.

For the year ended December 31, 2013, cash used in operations was attributable to the net loss for the year after adding back non-cash charges for loss on derivative liabilities, shares issued for technology access fee, amortization of loan discount, fair market value of warrants issued as June and July investment fees, stock-based compensation expense, and depreciation expenses. For the year ended December 31, 2012, cash used in operations was attributable to the net loss for the year after adding back non-cash charges for stock-based compensation expense, depreciation expenses and loss on disposal of equipment, which were partially offset by a decrease in accrued liabilities and an increase in receivables. Net cash used in investing activities for the year ended December 31, 2013 was \$0.1 million due to purchases of equipment. Net cash provided by investing activities for the year ended December 31, 2012 was \$3.1 million due to the sale of assets from discontinued operations slightly offset by purchases of property and equipment. Net cash provided by financing activities was \$25.9 million for the year ended December 31, 2013, due to the December 2013 private placement, the Series B financing and convertible loan notes. Net cash provided by financing activities was \$1.0 million for the year ended December 31, 2012, due to proceeds from convertible notes. We expect 2014 cash requirements to be in the range of \$14.5 million to \$16.0 million. We believe that our cash as of December 31, 2013, will be sufficient to fund our projected operating requirements through the first quarter of 2015.

We expect to need to raise additional capital or incur indebtedness to continue to fund our future operations. We may seek to raise capital through a variety of sources, including:

the public equity market;
private equity financing;
collaborative arrangements;
licensing arrangements; and/or
public or private debt.

Our ability to raise additional funds will depend on our clinical and regulatory events, our ability to identify promising in-licensing opportunities and factors related to financial, economic and market conditions, many of which are beyond our control. We cannot be certain that sufficient funds will be available to us when required or on satisfactory terms. If adequate funds are not available, we may be required to significantly reduce or refocus our operations or to obtain funds through arrangements that may require us to relinquish rights to certain of our products, technologies or potential markets, any of which could delay or require that we curtail our development programs or otherwise have a material adverse effect on our business, financial condition and results of operations. To the extent that additional capital is raised through the sale of equity or convertible debt securities, the issuance of such securities would result in ownership dilution to our existing stockholders.

If we are unable to secure additional financing on a timely basis or on terms favorable to us, we may be required to cease or reduce certain research and development projects, to sell some or all of our technology or assets or to merge all or a portion of our business with another entity. Insufficient funds may require us to delay, scale back or eliminate some or all of our activities, and if we are unable to obtain additional funding, there is uncertainty regarding our continued existence.

TABLE OF CONTENTS

Contractual Obligations and Commitments

In February 2011, the Company entered into an agreement with Virginia Biotechnology Research Partnership Authority for Richmond, Virginia laboratory space. This agreement has a contractual expiration date of February 29, 2012 at which time it converted to a rolling three-month lease. At September 30, 2014, the Company's minimum payment commitment for the Richmond, Virginia laboratory space was \$4,900.

In December 2011, the Company entered into an agreement with Nevis Limited and Charter Limited for laboratory space in Bedfordshire, United Kingdom. This agreement has a minimum period of 3 years and a contractual expiration date of December 8, 2016. At September 30, 2014, the Company's minimum payment commitment for the Bedfordshire laboratory space was \$67,600.

In February 2013, we entered into an agreement with Office Suites Plus (now Regus Management Group, LLC) for office space in Glen Allen, Virginia. The agreement has a minimum period of one year ending February 28, 2014. In October 2014 the Company entered into an agreement to extend this lease for six months to April 2015, with a monthly cost of \$3,340. At September 30, 2014, our minimum payment commitment for the Glen Allen office space was \$23,380.

In September 2013, we entered into an agreement with PBC Carlsbad, LLC for office space in Carlsbad, California. The agreement has a minimum period of six months ending February 28, 2014, at which time it was extended through August 2014, with a monthly cost of \$1,033. The agreement was extended through February 28, 2015, with a monthly cost of \$1,033. At September 30, 2014, the Company's minimum payment commitment for the Carlsbad office space was \$5,165.

Off-Balance Sheet Arrangements

As of December 31, 2013, we did not have any relationships with unconsolidated entities or financial partnerships, such as entities often referred to as structured finance or special purpose entities, which would have been established for the purpose of facilitating off-balance sheet arrangements or other contractually narrow or limited purposes. In addition, we do not engage in trading activities involving non-exchange traded contracts. Therefore, we are not materially exposed to any financing, liquidity, market or credit risk that could arise if we had engaged in these relationships.

Recent Financings

On December 16, 2013, we entered into subscription agreements to issue an aggregate amount of 72,007,000 shares of common stock for an aggregate purchase price of approximately \$18 million as part of a private placement. The purchasers of securities in each of these transactions acquired the securities for investment only and not with a view to or for sale in connection with any distribution thereof and appropriate legends were affixed to the securities issued in these transactions. Each of such purchasers was an accredited investor under Rule 506 of Regulation D or not a U.S. person under Regulation S.

On June 26, 2013, we completed a private placement of convertible preferred stock and warrants to purchase common stock with gross proceeds of \$7.0 million through the sale of shares of our newly-created Series B Convertible Preferred Stock. As part of the same transaction, approximately \$5.5 million in outstanding convertible notes were converted into shares of Series B Convertible Preferred Stock and warrants to purchase common stock. On July 15,

2013, we completed a second closing in which we converted approximately \$0.8 million of outstanding convertible notes into Series B Convertible Preferred Stock and warrants to purchase common stock. The financing was led by life-sciences investors RA Capital Management and Third Security, LLC, with participation from BioScience Managers Pty Ltd.

Under the terms of the financing, we issued an aggregate amount of approximately 10.0 million shares of the Series B Convertible Preferred Stock for an aggregate purchase price of approximately \$13.3 million (including the conversion of approximately \$6.3 million of outstanding convertible notes). Each share of Series B Convertible Preferred Stock is convertible into 10 shares of common stock. Additionally, we issued warrants to purchase an aggregate of up to approximately 25.0 million shares of common stock at an exercise price of \$0.14 per share. As a result of the completion of this private placement, as of July 15, 2013, all previously issued convertible notes have been converted and there are no convertible notes outstanding.

TABLE OF CONTENTS

Results of Operations

Comparison of the Years Ended December 31, 2012 and 2011

Revenue

For the years ended December 31, 2012 and 2011, we recognized \$0.7 million and \$0.1 million in revenue, respectively. For the years ended December 31, 2012 and 2011, we earned \$0.6 million and \$0.1 million of revenue through sublicensing agreements involving our former gene therapy program.

For the years ended December 31, 2012 and 2011, we also earned \$0.1 million and \$20,000 in grant revenue, respectively.

Research and Development

Research and development expenses were \$1.5 million for the year ended December 31, 2012, compared to \$0.7 million for the year ended December 31, 2011. The \$0.8 million increase in expenses is due to an increase in consulting and development expenses.

Research and development expenses are expected to increase in 2013 compared to 2012 as we plan to continue devoting substantial resources to research and development in future periods as we start clinical trials and continue our discovery efforts.

General and Administrative

General and administrative expenses were \$3.2 million for 2012, compared to \$3.3 million for 2011. The \$0.1 million decrease is due to lower administrative staffing and facilities expenses, partially offset by higher legal expenses related to the acquisition of SPH.

We currently expect our general and administrative expenses to increase in 2013 compared to 2012 due to the costs associated with preparing this registration statement and being a public company.

Discontinued Operations

In June 2012, we sold certain assets used in our gene therapy business including process development, quality control, quality assurance, manufacturing and bioanalytical functions for \$3.1 million. In addition to this cash consideration, we may receive a long-term royalty of 1.75% on all product sales. This royalty may be completely canceled at any time by a one-time payment of \$1.8 million.

Tax Refund

As of December 31, 2012, we had a United Kingdom research and development tax refund of \$0.1 million (£0.1 million) for the losses in the subsidiary based in the United Kingdom, compared to \$0.3 million for 2011. The decrease in the refund was due to reduced staffing in 2012 compared to 2011.

Interest Income (Expense)

Interest expense in 2012 was \$0.3 million, compared to \$0.1 million for 2011. The increase was due to interest accrued for convertible notes. During 2012 and 2011, we issued \$1.0 million and \$2.7 million in convertible notes, respectively. Interest on the unpaid principal balance of these notes accrues at the rate of ten percent (10%) per annum.

Income Taxes

We incurred net operating losses for the years ended December 31, 2012 and 2011 and, accordingly, we did not pay any federal or state income taxes. As of December 31, 2012, we had accumulated approximately \$170.4 million in U.S. and UK operating loss carry-forwards and research tax credit carry-forwards of approximately \$4.3 million. The carry-forwards began to expire in 2012. Our net operating loss carry-forwards are subject to certain limitations on annual utilization as a result of changes in ownership of us, as defined by federal and state tax laws.

TABLE OF CONTENTS

Net Operating Losses

We have not recorded a benefit from our net operating loss or research credit carry-forwards because we believe that it is uncertain that we will have sufficient income from future operations to realize the carry-forwards prior to their expiration. Accordingly, we have established a 100% valuation allowance against the deferred tax asset arising from the carry-forwards.

57

TABLE OF CONTENTS**Item 3. Properties.**

Our principal offices occupy approximately 471 square feet of leased office space pursuant to a lease agreement that expires in April 2015 and is located at 4870 Sadler Road, Suite 300, Glen Allen, VA 23060. We also lease approximately 708 square feet of lab space in Richmond (Virginia), approximately 153 square feet of office space in Carlsbad (California), approximately 5,000 square feet of lab space in Brookvale (Australia) and approximately 2,672 square feet of lab space in Bedford (United Kingdom) and approximately 4,000 square feet of lab and office space in Slovenia. We believe our facilities are adequate for our current and near-term needs.

Item 4. Security Ownership of Certain Beneficial Owners and Management.

The following table sets forth certain information with respect to the beneficial ownership of our common stock as of October 20, 2014, for:

each person known by us to beneficially own more than 5% of our outstanding shares of common stock,
each of our directors,
each of our named executive officers, and
all such directors, nominees for director and executive officers as a group.

The percentage of ownership depicted below is based on 273,869,493 shares of common stock outstanding on October 20, 2014, which consists of 187,159,093 shares of common stock outstanding as of October 20, 2014, and 86,710,400 shares of common stock issuable upon conversion of all outstanding shares of Series B Convertible Preferred Stock as of October 20, 2014 (assuming a conversion ratio equal to ten (10) common shares for each share of Series B Convertible Preferred Stock).

We have determined beneficial ownership in accordance with the rules of the SEC. These rules generally attribute beneficial ownership of securities to persons who possess sole or share voting power or investment power with respect to those securities. In addition, the rules include shares of common stock issuable pursuant to the exercise of stock options or warrants or pursuant to the conversion of our Series B Convertible Stock that are either immediately exercisable or convertible or exercisable or convertible within 60 days of October 20, 2014. Shares underlying such options, warrants and Series B Convertible Preferred Stock, however, are only considered outstanding for the purpose of computing the percentage ownership of that person and are not considered outstanding when computing the percentage ownership of any other person.

(1) Member of the audit committee.

(2) Member of the compensation committee.

(3) Member of the nominating and corporate governance committee.

No events listed in Item 401(f) of Regulation S-K have occurred during the past 10 years that are material to the evaluation of the ability or integrity of any of our directors or executive officers.

The following is a brief biography of the business experience during the past five years (and, in some instances, for prior years) of each director and executive officer of the Company, with each director biography including information regarding the experiences, qualifications, attributes or skills that caused our board of directors to determine that such member of our board of directors should serve as a director as of the date of this registration statement.

Executive Officers and Significant Employees

Jeremy Curnock Cook was appointed Interim Chief Executive Officer in September 2014 and has served as a member of our board of directors since July 1995 and as chairman of the board of directors since February 1998. Mr.

Curnock Cook has served as Chairman of International Bioscience Managers Limited, a corporate and investment advisory firm since 2000, and also currently serves as Managing Director of Bioscience Managers Pty Ltd, a medical sciences fund manager. From 1987 to 2000, Mr. Curnock Cook was a director of Rothschild Asset Management Limited, a corporate and investment advisory company, and was responsible for the Rothschild Bioscience Unit. Mr. Curnock Cook founded the International Biochemicals Group in 1975, which was sold in 1985 to Royal Dutch Shell, where he served as managing director until 1987. Mr. Curnock Cook holds an M.A. in natural sciences from Trinity College, Dublin. He also serves as a member of the board of Avita Medical Ltd, Nexus6 Ltd and SeaDragon Ltd. Mr.

Curnock Cook brings to the board significant experience as an investor in and board member of multiple biotechnology companies.

Wendy Johnson was appointed Interim Chief Operating Officer in September 2014 and joined our Board of Directors in May 2014. Between 2005 and January 2014 Ms. Johnson served as a venture partner at ProQuest Investments, a venture capital firm. From November 2006 until January 2014, Ms. Johnson served as the President and Chief

Executive Officer of Aires Pharmaceuticals, a ProQuest portfolio company. Prior to joining ProQuest, she served as Senior Vice President, Corporate Development, at Salmedix Inc., and she held senior business and corporate development positions at WomenFirst Healthcare, Prizm Pharmaceuticals (Selective Genetics Inc.), Cytel Corp., Synbiotics Corp., and Murex Corp. (Cambridge U.K.). Additionally, Ms. Johnson served as Assistant Director with the Center for Devices and Radiological Health at the U.S. Food and Drug Administration. Ms. Johnson holds an M.B.A. from Loyola University, an M.S. in clinical microbiology from the Hahnemann Medical School and a B.S. in microbiology from the University of Maryland. Ms. Johnson brings to our board significant experience in pharmaceutical drug development and business development, as well as a strong background in microbiology.

TABLE OF CONTENTS

David E. Bosher has served as our Interim Chief Financial Officer since July 2014. Since October 1, 2013, Mr. Bosher is serving as Managing Director for Fahrenheit Advisors, a consulting and financial services company based in Richmond, Virginia. Prior to joining Fahrenheit, Mr. Bosher served from 2006 to 2013 as Senior Vice President and Chief Financial Officer of Snagajob.com, Inc., a leading human capital services and hourly employment network for job seekers and employers, headquartered in Richmond, Virginia. Prior to Snagajob, he served from 2001 to 2006 as Senior Vice President and Chief Financial Officer of Payerpath, Inc., a U.S.-based healthcare revenue-cycle-management software company based in Richmond, Virginia. From 1988 to 2001, Mr. Bosher served in various senior finance roles with Cadmus Communications Corporation (NMS:CDMS) and was Cadmus Senior Vice President and Chief Financial Officer from 1999 to 2001. His work experience also includes having served as Director of Corporate Accounting at a major publicly traded pharmaceutical firm and as senior audit professional with a large regional public accounting firm. Mr. Bosher received a B.S. in Business, with a major in Accounting, and a Masters in Business Administration, from the University of Richmond.

Baxter F. Phillips III has served as our Chief Business Officer as of October 2014 and as our Vice President, Corporate Strategy and Business Development since October 2013. Prior to joining AmpliPhi, Mr. Phillips served as Director, Business Development at Depomed, Inc., a commercially engaged specialty pharmaceutical company developing and commercializing products to treat pain and other central nervous system conditions, from 2011 to 2013. Prior to Depomed, Mr. Phillips served as Senior Director, Corporate Development at Osteologix, Inc., a global biopharmaceutical company, from 2007 to 2011. Prior to Osteologix, Mr. Phillips served in a number of senior research, corporate and sales and marketing positions at Insmad Inc., a publically traded biotechnology company, from 1998 to 2007. Mr. Phillips has a B.S. in Biology from Hampden-Sydney College and an MBA from The Mason School of Business at the College of William and Mary.

David Harper, Ph.D. has served as our Chief Scientific Officer since the January 2011 acquisition of Biocontrol Ltd. by Targeted Genetics Corporation. Prior to joining AmpliPhi, Dr. Harper served as Chief Scientific Officer of Biocontrol, which he founded in 1997, from 2002 to 2011. He previously served as leader of the herpes virus research group in the Department of Virology at St. Bartholomew's Medical School, joining the faculty in 1991 as a Lecturer in Molecular Virology. Dr. Harper received his B.Sc. in microbiology and virology at the University of Warwick and his Ph.D. at the University of Newcastle-upon-Tyne, studying viral genetics. He carried out post-doctoral work at St. Bartholomew's Medical School in London and at the University of Iowa.

Non-Employee Directors

Louis Drapeau has served as a member of our board of directors since March 2011. Mr. Drapeau currently serves as Vice President and Chief Financial officer of InSite Vision, an ophthalmology drug development company, a position he has held since October 2007. From November 2008 until December 2010, he was also CEO of InSite Vision. Prior to InSite Vision, he served as Chief Financial Officer, Senior Vice President, Finance, at Nektar Therapeutics, a biopharmaceutical company, from January 2006 to August 2007. Prior to Nektar, he served as Acting Chief Executive Officer from August 2004 to May 2005 and as Senior Vice President and Chief Financial Officer from August 2002 to August 2005 for BioMarin Pharmaceutical Inc. Previously, Mr. Drapeau spent 30 years at Arthur Andersen, including 19 years as an Audit Partner in Arthur Andersen's Northern California Audit and Business Consulting practice, which included 12 years as Managing Partner. Mr. Drapeau received both his undergraduate degree in mechanical engineering and an M.B.A. from Stanford University. He also serves as a member of the board of Bio-Rad Laboratories and InterMune, Inc. Mr. Drapeau is able to provide valuable input with respect to accounting and financial matters as a result of his experience.

Michael S. Perry, D.V.M., Ph.D. has served as a member of our board of directors since November 2005. Dr. Perry is currently Global Head of Stem Cell Therapy and Vice President of the Integrated Hospital Care Franchise for Novartis Pharmaceuticals Corporation. Prior to joining Novartis in 2012, he was a Venture Partner with Bay City Capital, a venture capital firm, from 2005 to 2012. While serving in this capacity, he concurrently served as President and Chief Medical Officer at Poniard Pharmaceuticals, Inc., a publicly held drug development company, from 2009 to 2011 and also previously served as Chief Development Officer of VIA Pharmaceuticals, Inc., another publicly held biotechnology company, from 2005 to 2009. Dr. Perry served

TABLE OF CONTENTS

as chairman and Chief Executive Officer of Extropy Pharmaceuticals, Inc., a privately held pediatric specialty pharmaceutical company, from 2003 to 2005. From 2002 to 2003, Dr. Perry served as President and Chief Executive Officer of Pharsight Corporation, a publicly held software and consulting services firm. From 2000 to 2002, Dr. Perry served as Global Head of Research and Development for Baxter Healthcare. From 1997 to 2000, Dr. Perry was President and Chief Executive Officer of both SyStemix Inc. and Genetic Therapy Inc., two wholly owned subsidiaries of Novartis Pharma; he was Vice President of Regulatory Affairs for Novartis from 1994 to 1997. Prior to 1994, Dr. Perry held various management positions with Syntex Corporation, Schering-Plough Corporation and BioResearch Laboratories, Inc. Dr. Perry holds a Doctor of Veterinary Medicine, a Ph.D. in Biomedical Science-CardioPulmonary Pharmacology and a B.S. in Physics from the University of Guelph. He also serves as a member of the board of Arrowhead Research Corporation and of Avita Medical Ltd. Dr. Perry brings to the board substantial scientific and medical knowledge, as well as operational and investing experience.

Anthony Smithyman, Ph.D. joined our board of directors in November 2012 following the merger with Special Phage Services Pty Ltd of Sydney, Australia. Born in Malawi, Central Africa, Dr. Smithyman was educated in Scotland and obtained a B.Sc. from the University of St. Andrews, followed by a Ph.D. in Bacteriology and Immunology from Glasgow University. After completing a two-year post-doctoral Fellowship at the Sloan-Kettering Cancer Center in New York in 1978, he joined ICI Pharmaceuticals Ltd in Alderley Edge, Cheshire, England as Laboratory Head in the Immunology Department before moving to Australia in 1982. Dr. Smithyman has been involved with the Australian biotechnology industry for over 30 years, including as the current Managing Director of Cellabs Pty Ltd., a longstanding Australian biotechnology company. In 2004, Dr. Smithyman established Special Phage Services Pty Ltd to develop novel phage therapeutics for the human health, veterinary and aquaculture industries. Dr. Smithyman's experience in the biotechnology industry, and with phage therapeutics specifically, bring a valuable perspective to our board.

Julian P. Kirk has served as a member of our board of directors since June 2013. Mr. Kirk is a Managing Director of Third Security, LLC, where he has worked since the firm's inception with several portfolio companies of its managed investment funds. He is also involved with oversight of Third Security, LLC's internal operations. Since October 2012, he has served on the board of directors of Fibrocell Science, Inc. Since August 2010, he has served on the board of the New River Valley Economic Development Alliance. From October 2006 until December 2011, he served as member of the board of directors of IntelliMat, Inc. and as co-chairman of the board between September 2008 and December 2011. From September 2005 until December 2011, Mr. Kirk served as President of Harvest Pharmaceuticals Inc. Mr. Kirk also served as chairman of the board of managers of ECDS, LLC from June 2008 until March 2010. Mr. Kirk graduated as an Echols Scholar from the University of Virginia. Mr. Kirk brings to our board significant financial and operations expertise within our industry.

Philip J. Young has served as director since November 2011 and served as our President and Chief Executive Officer from November 2011 to September 2014. Mr. Young is a U.S.-based long-time executive in the biopharmaceuticals industry. He is the former President and CEO of Osteologix, Inc., a global biopharmaceutical company, which is currently based in Ireland. Prior to joining Osteologix, Mr. Young served as an Executive Vice President and Chief Business Officer for Insmid Inc., a publicly traded biotechnology company, from 2004 to 2007. Prior to Insmid Inc., Mr. Young held executive positions at Elan Corporation, Neurex Corporation, and Pharmacia Corporation. Mr. Young started his career in the biopharmaceuticals industry at Genentech, Inc. Mr. Young received a B.S. in Sociology with minors in Business and Psychology from James Madison University.

TABLE OF CONTENTS**Item 6. Executive Compensation.****Summary Compensation Table**

The following table provides information regarding the compensation paid during the last two fiscal years to our principal executive officer, and our two most highly compensated executive officers other than our principal executive officer who were serving as executive officers at the end of the last completed fiscal year, who are collectively referred to as named executive officers elsewhere in this registration statement.

Name and Principal Position	Year	Salary	Bonus	Option Awards ⁽¹⁾	All Other Compensation	Total
Philip J. Young	2013	\$400,000	\$	\$1,856,000	\$105,396	\$2,361,396
President, Chief Executive Officer and Director ⁽²⁾	2012	\$325,000	\$	\$1,680,000	\$	\$2,005,000
David Harper, Ph.D.	2013	\$225,541	\$	\$	\$	\$225,541
Chief Scientific Officer	2012	\$228,672	\$	\$240,000	\$	\$468,672
Kelley A. Wendt,	2013	\$155,938	\$	\$	\$18,575	\$174,513
Chief Financial Officer ⁽³⁾	2012	\$	\$	\$100,000	\$120,247	\$220,247

(1) Represents the aggregate grant date fair value computed in accordance with FASB ASC Topic 718.

(2) Mr. Young's employment as President and Chief Executive Officer ended on September 15, 2014. Ms. Wendt became Chief Financial Officer on January 1, 2013. Prior to this date, Ms. Wendt was engaged as an accounting consultant and all compensation paid during the year ended December 31, 2012 was for her services in that capacity. On May 15, 2014, Ms. Wendt informed the Company of her intent to resign from the position of Chief Financial Officer, effective as of May 23, 2014.

Grants of Plan-Based Awards

The following table sets forth certain information regarding grants of plan-based awards to our named executive officers for 2013.

Name	Grant Date	All other option awards: number of securities underlying options (#)	Exercise or base price of option awards (\$/share) ⁽¹⁾	Grant date fair value of option awards (\$) ⁽²⁾
Philip J. Young	6/25/2013	11,600,000	\$ 0.16	\$ 1,856,000
David Harper, Ph.D.			\$	\$
Kelley A. Wendt			\$	\$

(1) Represents the per share fair market value of our common stock, as determined in good faith by our board of directors on the grant date.

Amounts listed represent the aggregate fair value amount computed as of the grant date of each option and award during 2013 in accordance with FASB ASC Topic 718. Assumptions used in the calculation of these amounts are included in Note 6, Stock Options and Warrants, of the Notes to the Financial Statements. As required by SEC (2) rules, the amounts shown exclude the impact of estimated forfeitures related to service-based vesting conditions. Our named executive officers will only realize compensation to the extent the trading price of our common stock is greater than the exercise price of such stock options.

63

TABLE OF CONTENTS**Outstanding Equity Awards at Fiscal Year-End**

The following table sets forth certain information regarding all outstanding equity awards held by our named executive officers as of December 31, 2013.

Name	Number of Securities Underlying Unexercised Options (# Exercisable)		Number of Securities Underlying Unexercised Options (# Unexercisable)	Option Exercise Price (\$)	Option Expiration Date
Philip J. Young	2,100,000	(1)	6,300,000	\$ 0.20	10/23/2022
	5,152,334	(2)	6,447,666	\$ 0.16	6/25/2023
David Harper, Ph.D.	300,000	(3)	800,000	\$ 0.20	10/23/2022
Kelley A. Wendt	125,000	(4)	375,000	\$ 0.20	10/23/2022

6.25% of the total shares underlying this option vested and became exercisable on January 23, 2013. 6.25% of the total shares underlying this option vests and becomes exercisable on the first business day of each three (3) month (1) period thereafter, subject to continued service through each vesting date. This option may be subject to accelerated vesting as described above. As of December 31, 2013, 2,100,000 of the total shares underlying this option are vested and exercisable.

3,862,800 of the total shares underlying this option vested and became exercisable on the grant date, which was June 26, 2013. 1/36 of the remaining unvested shares underlying this option vests and becomes exercisable on (2) each one month anniversary of the grant date thereafter, subject to continued service through each vesting date. This option may be subject to accelerated vesting as described above. As of December 31, 2013, 5,152,334 of the total shares underlying this option are vested and exercisable.

6.25% of the total shares underlying this option vested and became exercisable on January 23, 2013. 6.25% of the total shares underlying this option vests and becomes exercisable on the first business day of each three (3) month (3) period thereafter, subject to continued service through each vesting date. This option may be subject to accelerated vesting as described below. As of December 31, 2013, 300,000 of the total shares underlying this option are vested and exercisable.

6.25% of the total shares underlying this option vested and became exercisable on January 23, 2013. 6.25% of the total shares underlying this option vests and becomes exercisable on the first business day of each three (3) month (4) period thereafter, subject to continued service through each vesting date. This option may be subject to accelerated vesting as described below. As of December 31, 2013, 125,000 of the total shares underlying this option are vested and exercisable.

Option Exercises and Stock Vested

Our named executive officers did not exercise any stock option awards during the year ended December 31, 2013.

Pension Benefits

None of our named executive officers participate in or have account balances in qualified or non-qualified defined benefit plans sponsored by us.

Non-Qualified Deferred Compensation

None of our named executive officers participate in or have account balances in qualified or non-qualified defined contribution plans or other non-qualified compensation plans sponsored by us.

Equity Incentive Plans

The purpose of all of our equity incentive plans is to promote the long-term success of the Company and the creation of shareholder value by offering key service providers an opportunity to share in such long-term success by acquiring a proprietary interest in the Company and to attract and retain the best available personnel for positions of substantial responsibility, and to provide additional incentive to employees, consultants and directors.

Our equity incentive plans seek to achieve these purposes by providing for discretionary long-term incentive awards in the form of options (which may constitute incentive stock options or nonstatutory stock options), stock

TABLE OF CONTENTS

appreciation rights, stock grants and stock units. Our equity incentive plans are administered by the board or a committee appointed by the board, which we refer to as the plan administrator and have a term of 10 years from the date they were adopted by the board of directors.

2009 Targeted Genetics Stock Incentive Plan and 2012 Stock Incentive Plan

Our board of directors and shareholders adopted our 2009 Targeted Genetics Stock Incentive Plan, which we refer to as the 2009 Plan, in March 2009. Our board of directors adopted our 2012 Stock Incentive Plan, which we refer to as the 2012 Plan, in October 2012. As of October 20, 2014, there are 1,306,760 shares of common stock and 9,322,964 shares of common stock remaining for future awards under the 2009 Plan and the 2012 Plan, respectively. We refer to the 2009 Plan and the 2012 Plan together as the Existing Plans.

The number of shares authorized under each of the Existing Plans is subject to adjustment in the event of a stock split, stock dividend or other change in our capitalization. The shares we issue under the Existing Plans may be authorized but unissued shares or shares we reacquire. The shares of common stock underlying any equity awards that are forfeited, canceled, repurchased, expired or are otherwise terminated (other than by exercise) under the Existing Plans are currently added back to the shares of common stock available for issuance under the Existing Plans.

The Existing Plans permit us to make grants of incentive stock options to employees and grants of non-qualified stock options and restricted stock to employees, officers, directors and consultants. The Existing Plans are administered by our board of directors. Our board of directors has the authority to select the individuals to whom awards will be granted, to make any combination of awards to participants, to accelerate the exercisability or vesting of any award and to determine the specific terms and conditions of each award, subject to the provisions of the Existing Plans.

The Existing Plans permit the grant of (1) options to purchase common stock intended to qualify as incentive stock options under Section 422 of the Internal Revenue Code of 1986, as amended, or the Code, and (2) options that do not so qualify. The option exercise price of each option will be determined by our board of directors but may not be less than 100% of the fair market value of the common stock on the date of grant. The term of each option will be fixed by our board of directors and may not exceed 10 years from the date of grant. All stock option awards that are granted pursuant to the Existing Plans are covered by an option agreement.

The Existing Plans also permit the award of stock grants, stock appreciation rights and stock units to participants, subject to such terms, conditions and restrictions as our board of directors may determine. All stock grants, stock appreciation rights and stock units that are granted pursuant to the Existing Plans are covered by a written agreement.

The Existing Plans provide that upon the effectiveness of a corporate transaction, as defined in each of the Existing Plans, in the event that all awards are not assumed or continued or substituted by the successor entity, all awards granted under the Existing Plans shall terminate. In addition, in connection with a corporate transaction, the plan administrator may provide the full automatic vesting and exercisability of one or more outstanding unvested awards under the Existing Plans in connection with a corporate transaction, on such terms and conditions as the plan administrator may specify. Furthermore, in connection with a change in control, as defined in each of the Existing Plans, the Existing Plans provide for the full automatic vesting and exercisability of any outstanding unvested awards held by certain key service providers, which under the terms of the Existing Plans, is defined as any employee, director or consultant who has been designated as a key service provider by the plan administrator, in the event that any such awards are not assumed or continued or substituted by the successor entity, or otherwise fully automatically vested by the plan administrator in connection with such change in control.

Our board of directors may amend, alter, suspend or terminate the Existing Plans at any time, subject to stockholder approval where such approval is required by applicable law. Our board of directors may also amend, modify or terminate any outstanding award, provided that no amendment to an award may materially impair any of the rights of a participant under any awards previously granted without his or her written consent. No awards may be granted under the 2009 Plan and 2012 Plan after March 3, 2019 and October 19, 2022, respectively.

TABLE OF CONTENTS

2013 Stock Incentive Plan

Our 2013 Stock Incentive Plan, which we refer to as the 2013 Plan, was approved by our board of directors in December 2013 and was approved by our shareholders on February 11, 2014. The 2013 Plan replaces the 2009 Plan and the 2012 Plan.

The 2013 Plan allows the plan administrator, to make equity-based incentive awards to our officers, employees, directors and other key persons (including consultants).

As of October 20, 2014, there were outstanding options to purchase 750,000 shares of common stock and 39,250,000 shares of common stock reserved for the issuance of awards under the 2013 Plan. This number is subject to adjustment in the event of a stock split, stock dividend or other change in our capitalization.

The shares issuable pursuant to awards granted under the 2013 Plan will be authorized but unissued shares or shares that we reacquire. The shares of common stock underlying any awards from the 2013 Plan that are forfeited, cancelled, held back upon exercise or settlement of an award to satisfy the exercise price or tax withholding, reacquired by us prior to vesting, satisfied without any issuance of common stock, expire or are otherwise terminated (other than by exercise) under the 2013 Plan will be added back to the shares of common stock available for issuance under the 2013 Plan.

The 2013 Plan will be administered by the plan administrator. The plan administrator has full power to select, from among the individuals eligible for awards, the individuals to whom awards will be granted, to make any combination of awards to participants, and to determine the specific terms and conditions of each award, subject to the provisions of the 2013 Plan. Persons eligible to participate in the 2013 Plan will be those full or part-time officers, employees, non-employee directors and other key persons (including consultants) as selected from time to time by our plan administrator in its discretion. The plan administrator may re-price options or stock appreciation rights without stockholder approval.

The 2013 Plan permits the granting of both options to purchase common stock intended to qualify as incentive stock options under Section 422 of the Code and options that do not so qualify. The exercise price of each stock option will be determined by our plan administrator but may not be less than 100% of the fair market value of our common stock on the date of grant or, in the case of an incentive stock option granted to a 10% owner, less than 110% of the fair market value of our common stock on the date of grant. The term of each stock option will be fixed by the plan administrator and may not exceed 10 years from the date of grant. The plan administrator will determine at what time or times each option may be exercised.

The plan administrator may also award stock appreciation rights subject to such conditions and restrictions as it may determine. Stock appreciation rights entitle the recipient to shares of common stock, or cash, equal to the value of the appreciation in our stock price over the exercise price. The exercise price may not be less than 100% of the fair market value of the common stock on the date of grant.

The plan administrator may also award restricted stock or restricted stock units to participants subject to such conditions and restrictions as it may determine. These conditions and restrictions may include the achievement of certain performance goals or continued employment with us through a specified vesting period. The plan administrator may also grant shares of common stock that are free from any restrictions under the 2013 Plan.

The plan administrator may grant cash bonuses under the 2013 Plan to participants, subject to the achievement of certain performance goals.

The plan administrator may grant performance-based awards to participants in the form of restricted stock, restricted stock units or cash-based awards upon the achievement of certain performance goals and such other conditions as the plan administrator shall determine. The plan administrator may grant such performance-based awards under the 2013 Plan that are intended to qualify as performance-based compensation under Section 162(m) of the Code. Those awards would only vest or become payable upon the attainment of performance goals that are established by our plan administrator and related to one or more performance criteria. The performance criteria that could be used with respect to any such awards include: net earnings or net income (before or after taxes); earnings per share; revenues or sales (including net sales or revenue growth); net operating profit; return measures (including return on assets, net assets, capital, invested

TABLE OF CONTENTS

capital, equity, sales, or revenue); cash flow (including operating cash flow, free cash flow, cash flow return on equity, and cash flow return on investment); earnings before or after taxes, interest, depreciation, and/or amortization; gross or operating margins; productivity ratios; share price (including growth measures and total stockholder return); expense targets; margins; operating efficiency; market share; working capital targets and change in working capital; economic value added or net operating income, any of which may be measured either in absolute terms or as compared to any incremental increase or as compared to results of a peer group. From and after the time that we become subject to Section 162(m) of the Code, the maximum award that is intended to qualify as performance-based compensation under Section 162(m) of the Code that may be made to any one employee during any one calendar year period with respect to options and stock appreciation rights is 18,000,000 shares for existing employees and 5,000,000 shares in the case of new hires. The 12-month limit with respect to restricted stock and restricted stock units is 10,000,000 shares in the case of either existing or new employees. From and after the time that we become subject to Section 162(m) of the Code, the maximum cash-based award that is intended to qualify as performance-based compensation is limited to \$10,000,000 in any 12-month period, which is pro-rated in the case of a partial performance period. The share limits are subject to adjustments in the event of a stock split, stock dividend or other change in our capitalization.

The 2013 Plan provides that upon the effectiveness of a corporate transaction, as defined in the 2013 Plan, in the event that all awards are not assumed or continued or substituted by the successor entity, all awards granted under the 2013 Plan shall terminate. In addition, in connection with a corporate transaction, the plan administrator may provide the full or partial automatic vesting and exercisability of one or more outstanding unvested awards under the 2013 Plan and the release from restrictions on transfer or forfeiture rights of such awards in connection with a corporate transaction, on such terms and conditions as the plan administrator may specify.

Our board of directors may amend or discontinue the 2013 Plan and our plan administrator may amend or cancel outstanding awards for purposes of satisfying changes in law or any other lawful purpose, but no such action may adversely affect rights under an award without the holder's consent. Certain amendments to the 2013 Plan require the approval of our stockholders.

No awards may be granted under the 2013 Plan after the date that is 10 years from the earlier of the date of adoption by our board of directors or the date of stockholder approval of the 2013 Plan. No awards under the 2013 Plan have been made prior to the date of this registration statement.

Non-Executive Director Compensation

The following table and related footnotes show the compensation paid during the year ended December 31, 2013 to our non-executive directors.

Name	Fees Earned or Paid in Cash	Option Awards	All Other Compensation	Total
Jeremy Curnock Cook ⁽¹⁾	\$ 70,875	\$	\$	\$ 70,875
Louis Drapeau ⁽²⁾	\$ 41,250	\$	\$	\$ 41,250
Anthony Peter Gellert ⁽³⁾	\$ 11,666	\$	\$	\$ 11,666
Michael S. Perry, Ph.D. ⁽⁴⁾	\$ 39,750	\$	\$	\$ 39,750
Anthony Smithyman, Ph.D. ⁽⁵⁾	\$ 13,333	\$	\$	\$ 13,333
Caroline A. Williams ⁽⁶⁾	\$ 50,750	\$	\$	\$ 50,750

Julian P. Kirk⁽⁷⁾

\$ \$ \$ \$

- (1) As of December 31, 2013, Mr. Cook holds stock options for an aggregate of 440,000 shares, of which 110,000 shares are vested and exercisable.
- (2) As of December 31, 2013, Mr. Drapeau holds stock options for an aggregate of 120,000 shares, of which 30,000 shares are vested and exercisable.

TABLE OF CONTENTS

- On June 26, 2013, Mr. Gellert resigned from our board of directors. As of June 26, 2013, Mr. Gellert held stock options for an aggregate of 50,000, of which 6,250 shares were vested and exercisable. Pursuant to the terms of his resignation, vesting will continue until December 31, 2015 as if that was his resignation date, at which time all
- (3) unvested shares will have vested and will be exercisable pursuant to the standard post-termination exercise terms of the applicable stock option agreements, which will allow the stock options to be exercised for a period of ninety (90) days following December 31, 2015. As of December 31, 2013, Mr. Gellert holds stock options for an aggregate of 50,000 shares, of which 12,500 shares are vested and exercisable.
- (4) As of December 31, 2013, Mr. Perry holds stock options for an aggregate of 170,000 shares, of which 42,500 shares are vested and exercisable.
- (5) As of December 31, 2013, Mr. Smithyman holds stock options for an aggregate of 50,000 shares, of which 12,500 shares are vested and exercisable.
- On June 26, 2013, Ms. Williams resigned from our board of directors. As of June 26, 2013, Ms. Williams held stock options for an aggregate of 150,000, of which 6,250 shares were vested and exercisable. Pursuant to the terms of her resignation, vesting will continue until December 31, 2015 as if that was her resignation date, at which time all unvested shares will have vested and will be
- (6) exercisable pursuant to the standard post-termination exercise terms of the applicable stock option agreements, which will allow the stock options to be exercised for a period of ninety (90) days following December 31, 2015. As of December 31, 2013, Ms. Williams holds stock options for an aggregate of 150,000 shares, of which 37,500 shares are vested and exercisable.
- (7) Mr. Kirk has served as a member of our board of directors since June 2013.

Item 7. Certain Relationships and Related Transactions, and Director Independence.

Transactions with Related Persons

The following is a summary of transactions since January 1, 2013 to which we have been a participant in which the amount involved exceeded or will exceed \$120,000, and in which any of our then directors, executive officers or holders of more than 5% of any class of our capital stock at the time of such transaction, or any members of their immediate family, had or will have a direct or indirect material interest, other than compensation arrangements which are described under the sections of this registration statement titled Non-Executive Director Compensation and Executive Compensation.

Sale of Convertible Notes

Since January 1, 2013, we have sold convertible notes to Pendinas Limited in varying principal amounts for an aggregate total of \$2,000,000. Additionally, we issued warrants to purchase an aggregate of up to approximately 7.0 million shares of common stock at an exercise price of \$0.14 per share. All such convertible notes have been converted as a result of the completion of our private placement of convertible preferred stock, as of July 15, 2013. The following table summarizes sales of such convertible notes to Pendinas Limited, which was a holder of more than 5% of our common stock as of the dates of each such transaction:

Related Party	Date	Principal Amount
Pendinas Limited	February 4, 2013	\$ 500,000.00
	March 12, 2013	\$ 500,000.00

April 12, 2013 \$ 500,000.00

May 13, 2013 \$ 500,000.00

Sale of Series B Convertible Preferred Stock

In June 2013, we sold an aggregate of 9,357,935 shares of our Series B Convertible Preferred Stock and warrants to purchase an aggregate of 23,394,835 shares of our common stock. Pendas Limited, a holder of more than 5% of our common stock as of the date of such transaction, converted all of its outstanding convertible notes into 3,225,061 shares of Series B Convertible Preferred Stock and a warrant to purchase 8,062,652 shares of our common stock in the transaction.

TABLE OF CONTENTS

In connection with our June 2013 private placement of convertible preferred stock, we paid a placement fee to Griffin Securities, Inc. in the amount of \$270,000 in cash and warrants to purchase 4,285,714 shares of common stock at an exercise price of \$0.14 per share, and to Phillip Capital Ltd in the amount of \$60,000 in cash and warrants to purchase 714,285 shares of common stock at an exercise price of \$0.14 per share.

In addition, in connection with the June 2013 private placement, NRM VII Holdings I, LLC purchased 2,142,857 shares of our Series B Convertible Preferred Stock and warrants to purchase an additional 5,357,142 shares of our common stock. NRM VII Holdings I, LLC is controlled by Randal J. Kirk, the father of Julian P. Kirk, a member of our board of directors. Randal J. Kirk is also deemed a holder of more than five percent of the shares of our common stock, as described in the section entitled Item 4. Security Ownership of Certain Beneficial Owners and Management.

Phillip Asset Management Ltd also purchased 714,285 shares of our Series B Convertible Preferred Stock and warrants to purchase an additional 1,785,712 shares of our common stock. Phillip Asset Management Ltd holds its shares in its capacity as trustee for Bioscience Managers Pty Ltd. Jeremy Curnock Cook, the chairman of our board of directors, is a Managing Director and holds an ownership interest in Bioscience Managers Pty Ltd.

The shares of common stock post-conversion pursuant to the June private placement of our Series B Convertible Preferred Stock will be entitled to piggyback rights and S-1 and S-3 registration rights. See the section of this registration statement entitled Item 11. Description of Registrant's Securities to be Registered Registration Rights for additional information.

Sale of Common Stock

In December 2013, in connection with a private placement of our common stock, we sold an aggregate of 300,000 shares of our common stock to Baxter F. Phillips III, our Chief Business Officer, for \$0.25 per share, which was the same price paid by the other investors participating in the private placement.

In addition, in connection with the December 2013 private placement, NRM VII Holdings I, LLC and Phillip Asset Management Ltd purchased 20,000,000 shares and 6,000,000 shares, respectively, of our common stock at a price per share of \$0.25, which was the same price paid by the other investors participating in the offering. NRM VII Holdings I, LLC is controlled by Randal J. Kirk, the father of Julian P. Kirk, a member of our board of directors. Randal J. Kirk is also deemed a holder of more than five percent of the shares of our common stock, as described in the section entitled Item 4. Security Ownership of Certain Beneficial Owners and Management. Phillip Asset Management Ltd holds its shares in its capacity as trustee for Bioscience Managers Pty Ltd. Jeremy Curnock Cook, the chairman of our board of directors, is a Managing Director and holds an ownership interest in Bioscience Managers Pty Ltd.

The shares of common stock purchased in the December 2013 private placement are entitled to certain registration rights, including the registration of shares for resale pursuant to this prospectus. See the section of this registration statement entitled Item 11. Description of Registrant's Securities to be Registered Registration Rights for additional information.

Director Independence

Under the listing requirements and rules of the NYSE MKT for smaller reporting companies, independent directors must compose at least 50% of a listed company's board of directors within a one-year period following such company's initial listing with the NYSE MKT. In addition, applicable NYSE MKT rules require that, subject to specified exceptions, each member of a listed company's audit, compensation and nominating committees must be independent within the meaning of applicable NYSE rules. Audit committee members must also satisfy the independence criteria

set forth in Rule 10A-3 under the Exchange Act.

In September 2014, our board of directors undertook a review of the independence of each director and considered whether any director has a material relationship with us that could compromise his or her ability to exercise independent judgment in carrying out his or her responsibilities. In making this determination, our board of directors considered the current and prior relationships that each non-employee director has with our company and all other facts and circumstances our board of directors deemed relevant in determining their independence, including the beneficial ownership of our capital stock by each non-employee director. As a result of this review, our board of directors determined that Messrs. Louis Drapeau and Michael Perry qualify as independent directors within the meaning of the NYSE MKT rules. Our board of directors also

TABLE OF CONTENTS

concluded that Mr. Curnock Cook and Ms. Johnson were not at such time independent directors within the meaning of the NYSE MKT rules given their roles as Interim Chief Executive Officer and Interim Chief Operating Officer, respectively. We anticipate that Mr. Curnock Cook and Ms. Johnson will qualify as independent directors within the meaning of the NYSE MKT rules once each ceases to operate in the interim executive roles in which each now serves.

As required under applicable NYSE MKT rules, we anticipate that our independent directors will meet in regularly scheduled executive sessions at which only independent directors are present.

Item 8. Legal Proceedings.

From time to time we are involved in legal proceedings or subject to claims arising in the ordinary course of our business. Although the results of litigation and claims cannot be predicted with certainty, we do not believe we are a party to any legal proceedings that, if determined adversely to us, would individually or taken together have a material adverse effect on our business, operating results, financial condition or cash flows. Regardless of the outcome, litigation can have an adverse impact on us because of defense and settlement costs, diversion of management resources and other factors.

Item 9. Market Price of and Dividends on the Registrant's Common Equity and Related Stockholder Matters.

Our shares of common stock are quoted on the OTCQB market under the symbol APHB. Our shares were previously quoted under the symbol TGEN. On February 22, 2011, in connection with our name change to AmpliPhi Biosciences Corporation, our quotation symbol was changed to APHB.

The following table sets forth the range of reported high and low closing bid quotations for our common stock for the fiscal quarters indicated. These quotations reflect inter-dealer prices, without retail markup, markdown or commission, and may not represent actual transactions. Consequently, the information provided below may not be indicative of our common stock price under different conditions.

TABLE OF CONTENTS

Holders of Common Stock

As of October 20, 2014, there were 296 holders of record of our common stock. As of such date, the number of shares of our common stock outstanding was 273,869,493, which consists of 187,159,093 shares of common stock outstanding as of October 20, 2014, and 86,710,400 shares of common stock issuable upon conversion of all outstanding shares of Series B Convertible Preferred Stock as of October 20, 2014 (assuming a conversion ratio equal to ten (10) common shares for each share of Series B Convertible Preferred Stock).

Dividends

We have never declared or paid any cash dividends or distributions on our common stock and currently do not plan to declare cash dividends on shares of our common stock in the foreseeable future. We expect that we will retain all of our available funds and future earnings, if any, for use in the operation and expansion of our business. Subject to the foregoing, the payment of cash dividends in the future, if any, will be at the discretion of our board of directors and will depend upon such factors as earnings levels, capital requirements, restrictions imposed by applicable law, our overall financial condition and any other factors deemed relevant by our board of directors.

Securities Authorized for Issuance under Equity Compensation Plans

In October 2012, our board of directors approved and adopted the 2012 Plan. Under the 2012 Plan, we are authorized to issue up to 35,000,000 shares of our common stock in stock incentive awards to employees, directors and consultants.

In March 2009, our board of directors and shareholders adopted the 2009 Plan. Under the 2009 Plan, we are authorized to issue up to 4,200,000 shares of our common stock in stock incentive awards to employees, directors and consultants.

In December 2013, our board of directors adopted the 2013 Plan. Under the 2013 Plan, we are authorized to issue up to 39,250,000 shares of our common stock in stock incentive awards to employees, directors and consultants. Our shareholders approved the 2013 Plan in February 2014.

The following table provides information as of December 31, 2013 with respect to our equity compensation plans:

Plan Category	Number of securities to be issued upon exercise of outstanding options, warrants and rights	Weighted-average exercise price of outstanding options, warrants and rights	Number of securities remaining available for future issuance under equity compensation plans (excluding securities reflected in
---------------	---	---	---

	(a)	(b)	column (a)) (c)

Equity compensation plans not approved by security holders ⁽²⁾	25,555,000	\$ 0.19	9,322,964
Total	25,721,000	\$ 0.19	10,627,724

(1)

The 2009 Plan.

(2) The 2012 Plan. Excludes shares of our common stock subject to the 2013 Plan, which was adopted by our board of directors in December 2013 and approved by our shareholders in February 2014.

71

TABLE OF CONTENTS

Item 10. Recent Sales of Unregistered Securities.

On December 16, 2013, we entered into subscription agreements to issue an aggregate amount of 72,007,000 shares of common stock for an aggregate purchase price of approximately \$18 million as part of a private placement. The offers were, and, when completed, the sales and issuances are expected to be, deemed to be exempt from registration under the Securities Act. The purchasers of securities in each of these transactions acquired the securities for investment only and not with a view to or for sale in connection with any distribution thereof and appropriate legends were affixed to the securities issued in these transactions. Each of such purchasers was an accredited investor under Rule 506 of Regulation D or not a U.S. person under Regulation S.

On June 26, 2013, we completed a private placement of convertible preferred stock and warrants to purchase common stock with gross proceeds of \$7.0 million through the sale of shares of our newly-created Series B Convertible Preferred Stock. As part of the same transaction, approximately \$5.5 million in outstanding convertible notes were converted into shares of Series B Convertible Preferred Stock and warrants to purchase common stock. On July 15, 2013, we completed a second closing in which we converted approximately \$0.8 million of outstanding convertible notes into Series B Convertible Preferred Stock and warrants to purchase common stock. The financing was led by life-sciences investors RA Capital Management and Third Security, LLC, with participation from BioScience Managers Pty Ltd.

Under the terms of the financing, we issued an aggregate amount of approximately 10 million shares of the Series B Convertible Preferred Stock for an aggregate purchase price of approximately \$13.3 million (including the conversion of approximately \$6.3 million of outstanding convertible notes). Each share of Series B Convertible Preferred Stock is convertible into 10 shares of common stock. Additionally, we issued warrants to purchase an aggregate of up to approximately 25.0 million shares of common stock at an exercise price of \$0.14 per share. The offers, sales and issuances of Series B Convertible Preferred Stock and warrants to purchase common stock were deemed to be exempt from registration under the Securities Act. The purchasers of securities in each of these transactions acquired the securities for investment only and not with a view to or for sale in connection with any distribution thereof and appropriate legends were affixed to the securities issued in these transactions. Each of such purchasers was an accredited investor under Rule 506 of Regulation D or not a U.S. person under Regulation S.

On March 29, 2013, pursuant to a Stock Issuance Agreement, which we refer to as the Issuance Agreement, we issued 24,000,000 shares of our common stock, or 26.4% of our total outstanding capital stock after such issuance, to Intrexon, a privately-held Virginia corporation that develops technology intended to provide synthetic control over cellular functions, in consideration of Intrexon's concurrent entry into the ECC with us to develop new bacteriophage-based therapies to target specific antibiotic-resistant infections. The Issuance Agreement also provides for the potential future issuance by us to Intrexon of shares of our common stock having a fair market value of up to \$7,500,000, depending upon the reaching of certain milestones under the ECC. The issuance of shares of common stock under the Issuance Agreement was deemed to be exempt from registration under the Securities Act as Intrexon was an accredited investor under Rule 506 of Regulation D.

Between April 13, 2012 and May 13, 2013, we sold convertible notes to Pendas Limited in varying principal amounts for an aggregate total of \$2,750,000. Additionally, we issued warrants to purchase an aggregate of up to approximately 7.0 million shares of common stock at an exercise price of \$0.14 per share. All such convertible notes have been converted as a result of the completion of our private placement of convertible preferred stock, as of July 15, 2013. The offers, sales and issuances of convertible notes and warrants to purchase common stock were deemed to be exempt from registration under the Securities Act. Pendas Limited was both an accredited investor under Rule 506 of Regulation D and not a U.S. person under Regulation S.

Between November 23, 2010 and February 1, 2012, we sold convertible notes to a total of twenty-two different parties in varying principal amounts for an aggregate total of \$1,872,462. All such convertible notes have been converted as a result of the completion of our private placement of convertible preferred stock, as of July 15, 2013. The offer, sales and issuances of convertible notes were deemed to be exempt from

72

TABLE OF CONTENTS

registration under the Securities Act. Each of the purchasers was either an accredited investor under Regulation D or not a U.S. person under Regulation S.

In November 2012, under the terms of our acquisition of SPH, we issued 40,000,000 shares of our common stock with 20,000,000 of those shares issued directly to the selling stockholders of SPH upon the closing of the acquisition, and the remaining 20,000,000 shares issued and held in escrow. The issuance of common stock was deemed to be exempt from registration under the Securities Act. Each of SPH's selling stockholders and each of the recipients of such shares was either an accredited investor under Regulation D or not a U.S. person under Regulation S.

In January 2011, under the terms of our acquisition of Biocontrol, we issued 22,586,073 shares of our common stock to the shareholders of Biocontrol with a total fair value of approximately \$8.6 million as of January 6, 2011, resulting in Biocontrol's former shareholders owning approximately 50% of our outstanding equity securities at the time. The issuance of common stock was deemed to be exempt from registration under the Securities Act. Each of Biocontrol's former shareholders was not a U.S. person under Regulation S.

Item 11. Description of Registrant's Securities to be Registered.

The following description of our capital stock, certain provisions of our articles of incorporation and bylaws as currently in effect and our intended certificate of incorporation and bylaws upon our reincorporation in Delaware, and certain provisions of Washington and Delaware law are summaries. You should also refer to the current articles of incorporation and the bylaws, which are filed as exhibits to this registration statement. We refer in this section to our certificate of incorporation and bylaws that we intend to adopt upon Delaware reincorporation as our certificate of incorporation and bylaws, respectively.

General

Prior to our reincorporation in Delaware, our articles of incorporation authorize us to issue up to 445,000,000 shares of common stock, \$0.01 par value per share, and 10,000,000 shares of preferred stock, \$0.01 par value per share, of which 180,000 shares of preferred stock are designated Series A Participating Cumulative Preferred Stock, 9,357,935 shares of preferred stock are designated Series B Convertible Preferred Stock and 462,065 shares of preferred stock are undesignated. After our reincorporation in Delaware, and without giving effect to the reverse stock split we intend to effect in connection with such reincorporation, which has been approved by our stockholders, our certificate of incorporation will authorize us to issue up to 445,000,000 shares of common stock, \$0.01 par value per share, and 10,000,000 shares of preferred stock, \$0.01 par value per share, of which 9,357,935 shares of preferred stock will be designated Series B Convertible Preferred Stock and 642,065 shares of preferred stock will be undesignated.

Our board of directors may establish the rights and preferences of the preferred stock from time to time, both before and after our reincorporation in Delaware.

Common Stock

Voting Rights

As of October 20, 2014, there were 187,159,093 shares of common stock issued and outstanding, which excludes 886,710,400 shares of common stock issuable as of such date upon conversion of the Series B Convertible Preferred Stock and other shares issuable or reserved for issuance pursuant to outstanding options or option plans. Each holder

of common stock is entitled to one vote for each share of common stock held on all matters submitted to a vote of the stockholders, including the election of directors. Our amended and restated articles of incorporation and amended and restated bylaws do not provide for cumulative voting rights.

Dividends

Subject to preferences that may be applicable to any then outstanding preferred stock, the holders of our outstanding shares of common stock are entitled to receive dividends, if any, as may be declared from time to time by our board of directors out of legally available funds.

Liquidation

In the event of our liquidation, dissolution or winding up, holders of common stock will be entitled to share ratably in the net assets legally available for distribution to stockholders after the payment of all of our

TABLE OF CONTENTS

debts and other liabilities, subject to the satisfaction of any liquidation preference granted to the holders of any outstanding shares of preferred stock.

Rights and Preferences

Holders of our common stock have no preemptive, conversion or subscription rights, and there are no redemption or sinking fund provisions applicable to the common stock. The rights, preferences and privileges of the holders of common stock are subject to, and may be adversely affected by, the rights of the holders of shares of any series of our preferred stock that are outstanding or that we may designate and issue in the future. All of our outstanding shares of common stock are fully paid and non-assessable.

Common Stock Held in Escrow

In October 2012, the Company announced the acquisition of SPH and its wholly owned subsidiary Special Phage Services Pty Ltd, and the consideration for such acquisition was paid in shares of our common stock. As a condition of the acquisition, 20,000,000 shares of such common stock were held in escrow, with 8,000,000 to satisfy potential warranty claims on behalf of the Company under the acquisition documents and the remaining 12,000,000 shares to be held pending completion of certain milestones. In November 2013, twelve months following the closing, 8,000,000 of the shares then held in escrow were released, with 12,000,000 shares remaining in escrow. Some or all of such 12,000,000 shares of common stock may, in the future, depending on certain circumstances, be returned to the Company as treasury stock.

Preferred Stock

As of October 20, 2014, there were 8,859,978 shares of Series B Convertible Preferred Stock outstanding, which are convertible into 88,599,780 shares of common stock as of such date.

Prior to our reincorporation in Delaware, our board of directors will have the authority, without further action by our stockholders, to issue up to 462,065 shares of preferred stock in one or more series, to establish from time to time the number of shares to be included in each such series, to fix the rights, preferences and privileges of the shares of each wholly unissued series and any qualifications, limitations or restrictions thereon, and to increase or decrease the number of shares of any such series, but not below the number of shares of such series then outstanding. After our reincorporation in Delaware, our board of directors will possess identical authority, except the number of shares of preferred stock authorized for issuance will equal up to 642,065 (without giving effect to the reverse stock split we intend to effect in connection with the reincorporation which has been approved by our stockholders).

Our board of directors may authorize the issuance of preferred stock with voting or conversion rights that could adversely affect the voting power or other rights of the holders of our common stock. The purpose of authorizing our board of directors to issue preferred stock and determine its rights and preferences is to eliminate delays associated with a stockholder vote on specific issuances. The issuance of preferred stock, while providing flexibility in connection with possible acquisitions and other corporate purposes, could, among other things, have the effect of delaying, deferring or preventing a change in control of us and may adversely affect the market price of our common stock and the voting and other rights of the holders of our common stock. It is not possible to state the actual effect of the issuance of any shares of preferred stock on the rights of holders of common stock until the board of directors determines the specific rights attached to that preferred stock.

There currently are no other provisions under our amended and restated articles of incorporation (nor will there be under our Delaware certificate of incorporation after reincorporation) or under any other contractual obligations whereby we are authorized or required to issue or sell shares of preferred stock and we have no present plans to issue any shares of preferred stock.

Series A Participating Cumulative Preferred Stock

The Company's current amended and restated articles of incorporation grant the board of directors authority to issue shares of Series A Participating Cumulative Preferred Stock upon the exercise of certain rights by certain stockholders pursuant to a Rights Agreement, dated October 17, 1996, between the Company and ChaseMellon Shareholder Services, as Rights Agent, as amended, which we refer to as the Rights

TABLE OF CONTENTS

Agreement. The Rights Agreement and all rights thereunder expired in October, 2006 and the Company currently has no plans to reauthorize or extend the effective term of any rights under the Rights Agreement or enter into a new rights agreement providing the same or similar rights to stockholders. Upon our reincorporation in Delaware, no shares of Series A Participating Cumulative Preferred Stock will be authorized.

Series B Convertible Preferred Stock

Shares of our Series B Convertible Preferred Stock are subject to automatic conversion into common stock upon the completion of an underwritten public offering with aggregate offering proceeds to the Company of at least \$7 million dollars (after reduction for underwriting discounts and commissions) and a price per share to the public of at least the purchase price of the shares of Series B Convertible Preferred Stock (subject to adjustment in the event of any stock dividend, stock split, stock distribution or combination with respect to such shares) upon the closing of which the shares of common stock of the company shall be listed for trading on the national securities exchanges operated by the New York Stock Exchange or NASDAQ Stock Market, or (ii) at the election of the holders of two-thirds of the then outstanding shares of Series B Convertible Preferred Stock. The shares of Series B Convertible Preferred Stock are also subject to voluntary conversion by the holders thereof at any time. The number of shares of our common stock to be issued upon the conversion of all outstanding shares of our Series B Convertible Preferred Stock depends on the closing date of our initial public offering that triggers conversion, or the date of election by individual holders or holders of at least two-thirds of the then outstanding shares of Series B Convertible Preferred Stock.

The terms of our Series B Convertible Preferred Stock provide that the shares of Series B Convertible Preferred Stock accrue dividends at the rate of 10% per year, which results in additional shares of our common stock being issuable upon conversion of our Series B Convertible Preferred Stock as such dividends accrue. Subsequent to June 30, 2013, 1,345,040, shares of Series B Convertible Preferred Stock were converted into shares of common stock. As of October 20, 2014, the outstanding shares of our Series B Convertible Preferred Stock would convert into an aggregate of 86,710,400 shares of our common stock (assuming a conversion ratio of 10 shares of common stock for each share of Series B Convertible Preferred Stock).

Prior to the mandatory conversion of the Series B Convertible Preferred Stock, if the Company issues any shares of common stock for consideration per share of less than the conversion price then in effect for the Series B Convertible Preferred Stock, the conversion rate for the Series B Convertible Preferred Stock shall be adjusted to a new rate that equals the product of:

the conversion rate in effect immediately before such issuance, multiplied by a fraction, the numerator of which is the Series B Stated Value (as defined in the Designation of Preferences, Rights and Limitations of Series B Convertible Preferred Stock), and the denominator of which is the consideration per share received in such issue multiplied by the conversion rate in effect immediately before such issuance.

Except for matters requiring the separate approval of the holders of the Series B Convertible Preferred Stock, the holders of the Series B Convertible Preferred Stock are entitled to that number of votes equal to the number of shares of the common stock into which the Series B Convertible Preferred Stock may be converted as of the date such vote is held. Approval of the holders of at least two-thirds of the then outstanding shares of Series B Convertible Preferred Stock is required to:

authorize, create or issue (by reclassification or otherwise) any other class or series of capital stock having rights, preferences or privileges senior to or in parity with the Series B Convertible Preferred Stock; and alter or change the rights, preferences or privileges of the Series B Convertible Preferred Stock, or increase or decrease the authorized or issued and outstanding number of shares of Series B Convertible Preferred Stock.

TABLE OF CONTENTS

The holders of the Series B Convertible Preferred Stock are also entitled to preferential payments upon a liquidation event that occurs prior to the mandatory conversion of the Series B Convertible Preferred Stock. In the case of any Liquidation Event (as defined in the Designation of Preferences, Rights and Limitations of Series B Convertible Preferred Stock), the holders of the Series B Convertible Preferred Stock then outstanding shall be entitled to receive and to be paid out of the assets or surplus funds available for distribution to our shareholders, prior to and in preference to any payments to be made to the holders of the shares of common stock, an amount per share equal to the greater of:

- the sum of (A) the Series B Stated Value then in effect plus (B) all accrued but unpaid dividends through the Liquidation Event plus (C) after the distribution contemplated by (A) and (B) above and assuming a distribution to the holders of shares of common stock in proportion to the shares of common stock held or that the holder has the (i) right to acquire upon conversion of the Series B Convertible Preferred Stock, such additional aggregate amount that would be distributable with respect to the aggregate number of shares of common stock issuable upon conversion of such shares of Series B Convertible Preferred Stock, assuming conversion of all shares of Series B Convertible Preferred Stock; and
- assuming a distribution to the holders of shares of common stock in proportion to the shares of common stock held or that the holder has the right to acquire upon conversion of the Series B Convertible Preferred Stock, the (ii) aggregate amount that would be distributable with respect to the aggregate number of shares of common stock issuable upon conversion of such shares of Series B Convertible Preferred Stock, assuming conversion of all shares of Series B Convertible Preferred Stock.

For purposes of clause (i) above only, the holders of Series B Convertible Preferred Stock shall be entitled to receive remaining assets and funds of the Company of an aggregate value below or equal to, but not to exceed, the aggregate of two times the Series B Stated Value at the time of such Liquidation Event.

Warrants

As of October 20, 2014, there were outstanding warrants to purchase the following shares of our capital stock:

Description	# of shares subject to such Warrants	Weighted-average exercise price of such Warrants
Common Stock	38,890,451	\$ 0.15

In December, 2011, as compensation for certain services provided in connection with our acquisition of Biocontrol, we issued warrants to purchase an aggregate of 1,355,164 shares of our common stock with an initial exercise price of \$0.46 per share. These warrants were issued to Rodman & Renshaw LLC and its affiliate, Edward Cappabianca.

Rodman & Renshaw LLC subsequently assigned its ownership interest in its warrants (exercisable for 1,016,373 shares of our common stock) to OTA LLC. All of the warrants held by Edward Cappabianca and OTA LLC expire in December 2016.

In February through May 2013, we issued warrants to purchase 7,030,387 shares of common stock at an exercise price of \$0.14 per share in connection with the issuance of convertible notes.

In June 2013, we issued warrants to purchase an aggregate of up to approximately 12.5 million shares of common stock at an exercise price of \$0.14 per share in connection with the private placement of our Series B Convertible Preferred Stock. In connection with the financing, we issued warrants to purchase approximately 12.5 million shares of common stock at an exercise price of \$0.14 per share to holders of our convertible notes that were converted in the

financing.

In connection with our June 2013 private placement of convertible preferred stock, we paid a placement fee to Griffin Securities, Inc. in the amount of \$270,000 in cash and warrants to purchase 4,285,714 shares of common stock at an exercise price of \$0.14 per share and to Phillip Capital Ltd in the amount of \$60,000 in cash and warrants to purchase 714,285 shares of common stock at an exercise price of \$0.14 per share.

76

TABLE OF CONTENTS

In connection with our December 2013 private placement of common stock, we paid a placement fee to Roth Capital Partners and Griffin Securities, Inc., consisting in the aggregate of \$1,080,045 in cash and warrants to purchase 4,320,180 shares of common stock.

Options

As of October 20, 2014, there were 25,719,000 shares of common stock subject to outstanding options.

Anti-Takeover Provisions

Provisions in our current articles of incorporation and bylaws and under Washington law and our intended certificate of incorporation and bylaws (upon reincorporation in Delaware) under Delaware law may delay or prevent an acquisition of us or a change in our management. These provisions include a classified board of directors, a prohibition on shareholder actions by less than unanimous written consent, and a requirement for the vote of shareholders holding at least two-thirds of all shares of our issued and outstanding capital stock to approve certain changes to our articles of incorporation or any business combination, such as a merger or a share exchange with another company. In addition, because we are incorporated in Washington, we are governed by the provisions of Chapter 23B.19 of the WBCA, which, among other things, restricts the ability of shareholders owning ten percent (10%) or more of our outstanding voting stock from merging or combining with us. In addition, these provisions may frustrate or prevent any attempts by our shareholders to replace or remove our current management by making it difficult for shareholders to replace members of our board of directors, which is responsible for appointing the members of our management. Also, because we are reincorporating in Delaware, we will then be governed by the provisions of Section 203 of the DGCL. These provisions may prohibit large stockholders, in particular those owning 15% or more of our outstanding voting stock, from merging or combining with us.

Registration Rights

Holders of warrants to purchase an aggregate of 1,355,164 shares of our common stock at an exercise price of \$0.46 per share are entitled to certain registration rights with respect to such shares. In addition, the shares of common stock issued in connection with the ECC with Intrexon, the shares of common stock issuable in connection with the June private placement of our Series B Convertible Preferred Stock (upon conversion of Series B Convertible Preferred Stock and/or exercise of warrants) and the shares of common stock to be issued in connection with the December 2013 private placement of our common stock are entitled to certain rights with respect to registration of such shares under the Securities Act. These shares are collectively referred to herein as registrable securities. The holders of these registrable securities possess registration rights pursuant to their respective executed agreements and as described in additional detail below.

Piggyback Registration Rights

If we propose to register any of our securities under the Securities Act either for our own account or, in the case of the warrants described above, for the account of other stockholders, the holders of our registrable securities then outstanding will each be entitled to notice of the registration and will be entitled to include their shares of common stock in any such registration statement. These piggyback registration rights are subject to specified conditions and limitations, including, in the case of an underwritten offering, the right of the underwriters to limit the number of shares included in any such registration under specified circumstances.

Demand Registration Rights

From the date that is 180 days after the effective date of the registration statement relating to our initial public offering, holders of at least 50% of our registrable shares from the June private placement of our Series B Convertible Preferred Stock are entitled to request to have such shares registered by us on a Form S-1 registration statement. As of

October 20, 2014, approximately 119,925,267 shares of common stock held by those holders post-conversion (assuming a conversion ratio equal to ten (10) common shares for each share of Series B Convertible Preferred Stock and the exercise of all warrants issued in connection with the June private placement) will be entitled to these Form S-1 registration rights.

TABLE OF CONTENTS

At any time we are eligible to use a Form S-3 registration statement, holders of at least 30% of our registrable securities from the June private placement of our Series B Convertible Preferred Stock are entitled to request to have such shares registered by us on a Form S-3 registration statement. As of October 20, 2014, approximately 119,925,267 shares of common stock held by those holders post-conversion (assuming a conversion ratio equal to ten (10) common shares for each share of Series B Convertible Preferred Stock and the exercise of all warrants issued in connection with the June private placement) will be entitled to these Form S-3 registration rights.

Resale Registration Statement

Pursuant to the Registration Rights Agreement, dated December 16, 2013, by and between the Company and the purchasers of shares in the December 2013 private placement, the Company agreed to file, within 30 days of the closing of the private placement, a registration statement on Form S-1 covering the resale of the shares purchased in the private placement. The Company would be liable for certain liquidated damages in the event the registration statement is not filed by, or declared or kept effective during, the time periods specified in the Registration Rights Agreement.

Expenses of Registration

We will pay all expenses relating to any piggyback or Form S-1 or S-3 registration, other than underwriting discounts and commissions, subject to specified conditions and limitations.

Transfer Agent

Our shares of common stock are issued in certificated form. The transfer agent and registrar for our common stock is Computershare. The transfer agent's address is 250 Royall Street, Canton, MA 02021.

Item 12. Indemnification of Directors and Officers.

Sections 23B.08.510 and 23B.08.570 of the WBCA authorize Washington corporations to indemnify directors and officers under certain circumstances against expenses and liabilities incurred in legal proceedings in which they are involved by reason of being a director or officer, as applicable. Section 23B.08.560 of the WBCA authorizes a corporation by provision in a bylaw approved by its shareholders to indemnify or agree to indemnify a director made a party to a proceeding, or obligate itself to advance or reimburse expenses incurred in a proceeding, without regard to the limitations imposed by Sections 23B.08.510 through 23B.08.550; provided that no such indemnity shall indemnify any director from or on account of (a) acts or omissions of the director finally adjudged to be intentional misconduct or a knowing violation of law, (b) conduct of the director finally adjudged to be in violation of Section 23B.08.310 of the WBCA (which section relates to unlawful distributions) or (c) any transaction with respect to which it was finally adjudged that such director personally received a benefit in money, property or services to which the director was not legally entitled.

Article 11 of the Company's current articles of incorporation, provides that, to the fullest extent that the WBCA permits the limitation or elimination of the liability of a director, a director shall not be liable to the Registrant or its shareholders for monetary damages for conduct as a director. Section 10 of the Company's amended and restated bylaws requires the Company to indemnify every present or former director or officer against expenses, liabilities and losses incurred in connection with serving as a director or officer, as applicable, and to advance expenses of such director or officer incurred in defending any proceeding covered by the indemnity.

Upon reincorporation in Delaware, we intend to adopt provisions in our certificate of incorporation that limit the liability of our directors for monetary damages for breach of their fiduciary duty as directors, except for liability that cannot be eliminated under Delaware law. Under Delaware law, our directors have a fiduciary duty to us which will not be eliminated by this provision in our certificate of incorporation. In addition, each of our directors will continue to be subject to liability under Delaware law for breach of the director's duty of loyalty to us for acts or omissions which are found by a court of competent jurisdiction to be not in good faith or which involve intentional misconduct or knowing violations of law for actions leading to improper personal benefit to the director and for payment of dividends or approval of stock repurchases or redemptions that are prohibited by Delaware law. This provision does not affect the directors' responsibilities under any

TABLE OF CONTENTS

other laws, such as the Federal securities laws. Delaware law further provides that directors of a company will not be personally liable for monetary damages for breach of their fiduciary duty as directors, except for liability for the following: (i) any breach of the director's duty of loyalty to us or our stockholders; (ii) acts or omissions not in good faith or which involve intentional misconduct or a knowing violation of law; (iii) unlawful payment of dividends or unlawful stock repurchases or redemptions; or (iv) any transaction from which the director derived an improper personal benefit. Additionally, Delaware law provides that the indemnification permitted thereunder shall not be deemed exclusive of any other rights to which the directors and officers may be entitled under our bylaws, any agreement, a vote of stockholders or otherwise. Our certificate of incorporation and bylaws, upon reincorporation, will eliminate the personal liability of directors to the maximum extent permitted by Delaware law. In addition, such certificate of incorporation and bylaws will provide that we may fully indemnify any person who was or is a party or is threatened to be made a party to any threatened, pending or completed action, suit or proceeding (whether civil, criminal, administrative or investigative) by reason of the fact that such person is or was one of our directors, officers, employees or other agents, against expenses (including attorneys' fees), judgments, fines and amounts paid in settlement actually and reasonably incurred by such person in connection with such action, suit or proceeding.

The Company maintains a policy of directors' and officers' liability insurance that insures the directors and officers against the cost of defense, settlement or payment of a judgment under certain circumstances. The Company has also entered into indemnification agreements with its executive officers and directors that provide for the indemnification of directors and executive officers to the fullest extent permitted by the WBCA against expenses reasonably incurred by such persons in any threatened, pending or completed action, suit, investigation or proceeding in connection with their service as (i) a director or officer or (ii) as a director, officer, employee or agent of another corporation or of a partnership, joint venture, trust or other enterprise, including service with respect to employee benefit plans, at the registrant's request. In addition, the indemnification agreements provide the Company with the obligation to advance expenses under certain circumstances and provide for procedural protections, including a determination by a reviewing party whether the indemnitee is permitted to be indemnified under applicable law. In addition, the Company acknowledges that it will be the indemnitor of first resort should the indemnitee have rights to indemnification provided by other persons. Upon reincorporation in Delaware, the Company intends to enter into substantially similar indemnification agreements with the same persons to indemnify such persons to the fullest extent permitted under the DGCL.

At present, there is no pending litigation or proceeding involving any of our directors or executive officers as to which indemnification is required or permitted, and we are not aware of any threatened litigation or proceeding that may result in a claim for indemnification.

Item 13. Financial Statements and Supplementary Data.

See the financial statements and related notes beginning on page F-1 of this registration statement.

Item 14. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure.

None.

AMPLIPHI BIOSCIENCES CORPORATION

CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

September 30, 2014

(Unaudited)

1. Nature of Business and Significant Accounting Policies

Nature of Business

AmpliPhi Biosciences Corporation (the Company) was incorporated in the state of Washington in 1989. The Company, headquartered in Richmond, Virginia, is dedicated to developing novel antibacterial solutions called bacteriophage (phage). Phages are naturally occurring viruses that preferentially target and kill their bacterial targets.

Basis of Presentation

The interim consolidated financial statements include the accounts of the Company and its wholly owned subsidiaries Biocontrol, AmpliPhi d.o.o., and AmpliPhi Australia. All significant intercompany accounts and transactions have been eliminated. All amounts on the financial statements and disclosures have been rounded to the nearest \$1,000 except share and per share data.

The interim consolidated financial statements included herein have been prepared by the Company, without audit, pursuant to the rules and regulations of the Securities and Exchange Commission, or SEC. In the opinion of the Company's management, all adjustments (consisting of normal recurring adjustments, reclassifications, and non-recurring adjustments) necessary to present fairly our results of operations for the three months and nine months ended September 30, 2014 and 2013, our cash flows for the nine months ended September 30, 2014 and 2013 and our financial position as of September 30, 2014 have been made. The results of operations for such interim periods are not necessarily indicative of the operating results to be expected for the full year.

Certain information and disclosures normally included in the notes to the annual financial statements have been condensed or omitted from these interim consolidated financial statements. Accordingly, these interim consolidated financial statements should be read in conjunction with the 2013 audited consolidated financial statements and notes.

Use of Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements, and the reported amounts of revenue and expenses during the reporting period. Actual results could differ from those estimates.

Cash and Cash Equivalents

The Company considers cash equivalents to be short-term investments that have a maturity at the time of purchase of three months or less, are readily convertible into cash and have an insignificant level of valuation risk attributable to potential changes in interest rates. Cash equivalents are recorded at cost, which approximates fair market value, and consist primarily of money market accounts.

Accounts Receivable

Accounts receivable amounts are stated at their face amounts less any allowance. Provisions for doubtful accounts are estimated based on assessment of the probable collection from specific customer accounts and other known factors. If an account was determined to be uncollectible (payment has not been made in accordance with contract terms), it would be written off against the allowance. As of September 30, 2014 and December 31, 2013, management determined no allowance for doubtful accounts was required.

Property and Equipment

Property and equipment are recorded at cost and are depreciated using the straight-line method over the estimated useful lives of the related assets, generally three to seven years.

TABLE OF CONTENTS

AMPLIPHI BIOSCIENCES CORPORATION
CONDENSED NOTES TO CONSOLIDATED FINANCIAL
STATEMENTS
September 30, 2014
(Unaudited)

1. Nature of Business and Significant Accounting Policies
(continued)

Prepaid Expenses and Other Current Assets

Prepaid and other current assets as of September 30, 2014 and December 31, 2013 consist primarily of prepaid insurance and deposits.

Goodwill

Investments in purchased companies in excess of the underlying fair value of net assets at the date of acquisition are recorded as goodwill and assessed annually for impairment. If considered impaired, goodwill will be written down to fair value and a corresponding impairment loss recognized.

In 2012, the rights to SPH Holdings Pty Ltd's know-how and phage libraries were acquired in a business combination with an aggregate value of \$7,172,000. Goodwill in the amount of \$2,381,000 was recorded. In management's opinion, no goodwill has been impaired as of September 30, 2014 and December 31, 2013.

In 2011, the rights to Biocontrol Limited's patents and phage libraries were acquired in a business combination with an aggregate value of \$8,584,000. Goodwill in the amount of \$1,948,000 was recorded. In management's opinion, no goodwill has been impaired as of September 30, 2014 and December 31, 2013.

Patents

Patents are recorded at cost and are amortized using the straight-line method over the estimated useful lives of the patents.

In 2011, the rights to Biocontrol Limited's patents were acquired in a business combination. Patents in the amount of \$493,000 have been recorded. These patents are being amortized over their useful life through December 2026.

Stock-Based Compensation

The Company accounts for stock-based payments under the guidance of Financial Accounting Standards Board (FASB) Accounting Standards Codification (ASC) 718, *Stock Compensation*, which requires measurement of

compensation cost for all share-based payment awards at fair value on the date of grant and recognition of compensation cost over the requisite service period (typically the vesting period) for awards expected to vest.

Warrant and Preferred Shares Conversion Feature Liability

The Company accounts for warrants and the preferred shares conversion feature of the Company's Series B preferred stock with anti-dilution (down-round) provisions under the guidance of ASC 815, *Derivatives, and Hedging* and Emerging Issue Task Force Statement 07-5: *Determining Whether an Instrument (or Embedded Feature) Is Indexed to an Entity's Own Stock*, which require such warrants and the Series B preferred shares conversion feature to be recorded as a liability and adjusted to fair value in each reporting period.

Fair Value of Financial Assets and Liabilities Derivative Instruments

The Company measures the fair value of financial assets and liabilities in accordance with GAAP, which defines fair value, establishes a framework for measuring fair value, and requires certain disclosures about fair value measurements.

F-7

TABLE OF CONTENTS

AMPLIPHI BIOSCIENCES CORPORATION
CONDENSED NOTES TO CONSOLIDATED FINANCIAL
STATEMENTS
September 30, 2014
(Unaudited)

1. Nature of Business and Significant Accounting Policies
(continued)

GAAP defines fair value as the exchange price that would be received for an asset or paid to transfer a liability (an exit price) in the principal or most advantageous market for the asset or liability in an orderly transaction between market participants on the measurement date. GAAP also establishes a fair value hierarchy, which requires an entity to maximize the use of observable inputs and minimize the use of unobservable inputs when measuring fair value.

GAAP describes three levels of inputs that may be used to measure fair value:

Level 1 quoted prices in active markets for identical assets or liabilities.

Level 2 quoted prices for similar assets and liabilities in active markets or inputs that are observable.

Level 3 inputs that are unobservable.

The Company does not use derivative financial instruments to hedge exposures to cash-flow, market or foreign-currency risks. However, the Company has entered into certain financial instruments and contracts, such as convertible loan notes with detachable common stock warrants and the issuance of preferred stock with detachable common stock warrants with features that are either i) not afforded equity classification, ii) embody risks not clearly and closely related to host contracts, or iii) may be net-cash settled by the counterparty. These instruments are required to be carried as derivative liabilities, at fair value.

The Company estimates fair values of these derivatives utilizing Level 2 inputs. The Company uses the Monte Carlo valuation technique as it embodies all of the requisite assumptions (including trading volatility, remaining term to maturity, market price, strike price, and risk free rates) necessary to fair value these instruments.

Estimating fair values of derivative financial instruments, including Level 2 instruments, require the use of significant and subjective inputs that may, and are likely to, change over the duration of the instrument with related changes in internal and external market factors. In addition, option-based techniques are volatile and sensitive to changes in our trading market price, the trading market price of various peer companies and other key assumptions. Since derivative financial instruments are initially and subsequently carried at fair value, our income will reflect this sensitivity of internal and external factors.

Revenue Recognition

The Company generates revenue from technology licenses. Revenue under technology licenses typically consists of nonrefundable, up-front license fees, technology access fees and various other payments. The Company recognizes revenue associated with performance milestones as earned, typically based upon the achievement of the specific milestones defined in the applicable agreements.

The Company recognizes revenue under research and development contracts as the related costs are incurred. When contracts include multiple elements, the Company follows ASC 605-25, Multiple Element Arrangements, which requires the Company to satisfy the following before revenue can be recognized:

The delivered items have value to the customer on a stand-alone basis;

Any undelivered items have objective and reliable evidence of fair value; and

Delivery or performance is probable and within the Company's control for any delivered items that have a right of return.

The Company classifies advance payments received in excess of amounts earned as deferred revenue.

Based upon the terms specified in its collaboration agreements, the Company receives advance payments from some of its collaboration partners before the project has been performed. These payments are deferred and recognized as revenue when the costs are incurred.

**September 30, 2014
(Unaudited)**

**1. Nature of Business and Significant Accounting Policies
(continued)**

Research and Development

Research and development costs include salaries, costs of outside collaborators and outside services, royalty and license costs and allocated facility, occupancy and utility expenses. The Company expenses research and development costs as incurred.

In Process Research & Development (IPR&D) assets represent capitalized incomplete research projects that the Company acquired through business combinations. Such assets are initially measured at their acquisition date fair values. The fair value of the research projects is recorded as intangible assets on the consolidated balance sheet rather than expensed regardless of whether these assets have an alternative future use. The amounts capitalized are being accounted for as indefinite-lived intangible assets, subject to impairment testing until completion or abandonment of research and development efforts associated with the projects. Upon successful completion of each project, the Company will make a determination as to the then remaining useful life of the intangible asset and begin amortization. The Company tests its indefinite-lived intangibles, including IPR&D assets, for impairment at least annually. In 2012, the rights to SPH Holdings Pty Ltd's know-how and phage libraries were acquired by a business combination for \$7,172,000. In 2012, IPR&D in the amount of \$5,161,000 was recorded. In management's opinion, this IPR&D has not been impaired as of September 30, 2014 and December 31, 2013.

In 2011, the rights to Biocontrol Limited's patents and phage libraries were acquired by a business combination \$8,584,000. In 2011, IPR&D in the amount of \$7,285,000 was recorded. In management's opinion, this IPR&D has not been impaired as of September 30, 2014 and December 31, 2013.

Net Income (Loss) per Common Share

Net income (loss) per common share is based on net income (loss) divided by the weighted average number of common shares outstanding during the period. For the three months ended September 30, 2014 and the nine months ended September 30, 2014, both basic and diluted net income (loss) are disclosed in the Consolidated Statements of Operations and Comprehensive Income. For the three months ended September 30, 2013 and the nine months ended September 30, 2013, the diluted net loss per share is the same as the basic net loss per share because all stock options, warrants, contingent shares, and Series B Preferred shares were antidilutive with respect to computing the net loss per share and therefore were excluded from the calculation of diluted net loss per share. The total number of shares that

the Company excluded from the calculations of net loss per share was 150,283,630 shares for the three month period ending September 30, 2013 and 63,155,331 shares for the nine month period ending September 30, 2013.

Recent Accounting Pronouncements

On February 5, 2013, the FASB issued ASU no. 2013-02 which adds new disclosure requirements for items reclassified out of accumulated other comprehensive income (AOCI). The ASU is intended to help entities improve the transparency of changes in other comprehensive income (OCI) and items reclassified out of AOCI in their financial statements. It does not amend any existing requirements for reporting net income or OCI in the financial statements. For public entities, the new disclosure requirements are effective for fiscal years, and interim periods within those years, beginning after December 15, 2012. For nonpublic entities, the ASU is effective for fiscal years beginning after December 15, 2013, and interim and annual periods thereafter. The Company elected to early adopt this standard which did not result in any changes to the consolidated financial statements.

F-9

TABLE OF CONTENTS

AMPLIPHI BIOSCIENCES CORPORATION

CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

**September 30, 2014
(Unaudited)**

2. Liquidity

The Company has prepared the accompanying consolidated financial statements on a going concern basis, which assumes that the Company will realize its assets and satisfy its liabilities in the normal course of business. However, the Company has incurred net losses since its inception, has negative operating cash flows and has an accumulated deficit of \$355.3 million as of September 30, 2014. These circumstances raise substantial doubt about the Company's ability to continue as a going concern. The accompanying financial statements do not include any adjustments to reflect the possible future effects on the recoverability and classification of assets or the amounts and classifications of liabilities that may result from the outcome of the uncertainty concerning the Company's ability to continue as a going concern.

The Company believes that its current resources will only be sufficient to fund operations through the first quarter of 2015. This estimate is based on the Company's ability to manage its staffing expenses and its working capital. Actual results could differ from its estimates. The Company intends to seek additional financing in order to fund operations through 2015; however, the Company cannot provide assurances that it will be successful in obtaining additional financing for these periods or as needed in the future. If the Company does not raise additional funds by the first quarter of 2015, it plans to implement cost reduction measures, such as a reduction in workforce, reducing its intellectual property prosecution, reducing other operating activities, and/or the pursuit of alternative financing transactions that would likely be on terms disadvantageous to the Company and dilutive to its shareholders. The Company could also be required to relinquish rights to its technology or product candidates or in-licensed technology on unfavorable terms, either of which would reduce the ultimate value of the technology or product candidates, or to sell assets likely at values significantly below their potential worth. If the Company is unable to secure additional capital, it may be required to cease operations, declare bankruptcy or otherwise wind-up its business.

3. Preferred Shares

On June 13, 2013, the Company's Board of Directors approved a resolution designating 10,016,080 shares of Preferred Stock as Series B Convertible Preferred Stock with an initial stated value of \$1.40 and par value of \$0.01. Each Series B preferred share is convertible into 10 shares of common stock and is entitled to the number of votes equal to the number of shares of common stock. These Series B shares may be converted to common stock by the holder of the shares at any time. The Series B shares shall be automatically converted into common shares upon the closing of an underwritten initial public offering with aggregate proceeds to the Company of at least \$7 million and a price per share to the public of at least the Series B stated value upon the closing of which the shares of common stock of the Company shall be listed for trading on the New York Stock Exchange. The Series B shares are also convertible into common shares upon the election of the holders of two-thirds of the outstanding Series B shares. Until conversion, the

holders of Series B Preferred shares shall be entitled to receive dividends of 10% of the Series B stated value per annum.

In connection with the private placement of Series B Convertible Preferred Stock, the Company recorded a liability for a complex embedded derivative that required bifurcation under ASC Section 815. The embedded derivative includes a redemption feature, multiple dividend features, as well as multiple conversion features with a down-round ratchet provision. The Company estimates the fair values of the conversion feature using a Monte Carlo valuation model. The Company measured the fair value of the conversion feature on June 26, 2013 and July 15, 2013 (dates of issuance) and recorded the initial liability as part of the private placement proceeds.

On June 26, 2013, the Company issued 4,999,999 shares of the Company's newly-created Series B Convertible Preferred Stock and warrants to purchase 12,499,996 shares of common stock at an exercise price of \$0.14 per share for an aggregate purchase price of \$7.0 million. The value of the derivative liability related to the warrants was \$1,886,000 and the value of the derivative liability related to the preferred shares was

F-10

TABLE OF CONTENTS

AMPLIPHI BIOSCIENCES CORPORATION

CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

September 30, 2014
(Unaudited)

3. Preferred Shares (continued)

\$5,064,000. As part of the same transaction, the Company converted \$5,491,001 in outstanding convertible loan notes (principal and interest) into 4,357,936 shares of Series B Convertible Preferred Stock and warrants to purchase 10,894,839 shares of common stock at an exercise price of \$0.14 per share. The value of the derivative liability related to the warrants was \$1,644,000 and the value of the derivative liability related to the preferred shares was \$3,804,000. As part of this issuance, the Company issued warrants to purchase 4,999,999 shares of common stock at an exercise price of \$0.14 per share with an initial fair value of \$759,000 and paid \$350,000 to the placement agents. As a result of this financing, all outstanding convertible notes were converted into shares of Series B Convertible Preferred Stock and warrants to purchase common stock. On July 15, 2013, the remaining outstanding convertible loan notes, totaling \$829,277 in principal and interest, were converted into 658,145 shares of Series B Convertible Preferred Stock and warrants to purchase 1,645,361 shares of common stock at an exercise price of \$0.14 per share. The value of the derivative liability related to the warrants was \$674,000 and the value of the derivative liability related to the preferred shares was \$155,000.

In connection with the private placement of Series B Convertible Preferred Stock, the Company recorded a liability for the conversion feature that contains a provision that protect holders from a decline in the issue price of the Company's common stock (down-round provision). The Company estimates the fair values of the conversion feature using a Monte Carlo valuation model. The Company measured the fair value of the conversion feature on June 26, 2013 and July 15, 2013 and recorded the initial liability as part of the private placement proceeds.

On May 16, 2014, 188,938 preferred shares were converted into 1,889,380 shares of common stock. Due to this conversion, a gain on derivative liabilities of \$118,000 was recognized and \$741,000 was reclassified out of the derivative liability account and into equity.

The Company re-measured the fair value of the conversion feature at September 30, 2014 and recorded \$18.4 million gain on derivative liabilities during the third quarter to adjust the liability associated with the conversion feature to an estimated fair value of \$7.6 million. The change in fair value and the associated gain was attributable to a decline in the market value of our common stock as of September 30, 2014.

4. Warrants and Warrants Liability

The Company follows ASC 815-40, *Contracts in an Entity's Own Equity*, as it relates to outstanding warrants.

In connection with the December 2013 private placement of 72,007,000 shares of the Company's common stock at a price per share of \$0.25, the Company issued an aggregate of warrants to purchase 4,320,420 shares of common stock at an exercise price of \$0.25 per share to the placement agents. These warrants expire December 2018. The warrants contain provisions that protect holders from a decline in the issue price of the Company's common stock (down-round provision) and contain net settlement provisions. Due to these provisions, the Company accounted for these warrants as liabilities instead of equity.

In connection with the private placement of Series B Convertible Preferred Stock, which occurred through two closings on June 26, 2013 and July 15, 2013, respectively, the Company issued an aggregate of warrants to purchase 30,040,194 shares of common stock at an exercise price of \$0.14 per share. These warrants expire June 2018. The warrants contain provisions that protect holders from a decline in the issue price of the Company's common stock (down-round provision) and contain net settlement provisions. Due to these provisions, the Company accounted for these warrants as liabilities instead of equity. The Company measured the fair value of these warrants on June 26, 2013 and July 15, 2013 and recorded the initial liability as part of the private placement proceeds and expensed \$1.4 million for the warrants issued to the placement agent.

F-11

TABLE OF CONTENTS**AMPLIPHI BIOSCIENCES CORPORATION****CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS****September 30, 2014
(Unaudited)****4. Warrants and Warrants Liability (continued)**

We estimate the fair values of these securities using a Monte Carlo valuation model. The following warrants were issued in 2013 using the Monte Carlo valuation method with the key inputs as follows:

	June 26, 2013	July 15, 2013	December 23, 2013
Warrants issued	28,394,834	1,645,360	4,320,420
Risk free interest rate	.0109	.0109	0.0167
Volatility	160.94 %	163.08 %	155.24 %
Expected term	5 years	5 years	5 years
Exercise price	\$0.14	\$0.14	\$0.25

From February through May 2013, in connection with the issuance of new convertible promissory notes, the Company issued warrants to purchase up to 7,030,387 shares of its common stock. These warrants expire February through May 2018 and are exercisable at a price of \$0.14 per share. These warrants are considered to be equity.

In 2011, in connection with the Biocontrol business combination, the Company issued warrants to purchase up to 1,355,164 shares of its common stock. These warrants expire in December 2016 and are exercisable at a price of \$0.46 per share. These warrants are considered to be equity.

On June 26, 2014, 3,855,714 warrants, issued on June 26, 2013, were exercised. Due to this exercise, 2,734,151 shares of common stock were issued, a gain on derivative liabilities of \$398,000 was recognized, and \$1,729,000 was classified out of the derivative liability account and into equity.

The Company re-measured the fair value of the liability warrants at September 30, 2014 and recorded a \$5.9 million gain on derivative liabilities during the third quarter to adjust the liabilities associated with the warrants to their estimated fair values totaling \$6.9 million. The change in fair value and the resulting gain was attributable to a decline in the market value of our common stock as of September 30, 2014.

5. Stock Options

In October 2012, our board of directors approved and adopted the 2012 Stock Incentive Plan, which we refer to as the 2012 Plan. Under the 2012 Plan, we are authorized to issue up to 35,000,000 shares of our common stock in stock incentive awards to employees, directors and consultants.

In March 2009, our board of directors and shareholders adopted the 2009 Stock Incentive Plan, which we refer to as the 2009 Stock Incentive Plan. Under the 2009 Plan, we are authorized to issue up to 4,200,000 shares of our common stock in stock incentive awards to employees, directors and consultants.

In December 2013, our board of directors adopted the 2013 Plan. Under the 2013 Plan, we are authorized to issue up to 40,000,000 shares of our common stock in stock incentive awards to employees, directors and consultants. Our shareholders approved the 2013 Plan in February 2014.

The Company's 2013 Stock Incentive Plan provides for the issuance of long-term incentive awards, or Awards, in the form of non-qualified and incentive stock options, or Options, stock appreciation rights, stock grants and restricted stock units. The Awards may be granted by the Company's Board of Directors to its employees, directors and officers and to consultants, agents, advisors and independent contractors who provide services to the Company. The exercise price for Options must not be less than the fair market value of the underlying shares on the date of grant. Options expire no later than ten years from the date of grant and generally vest and become exercisable over a four-year period following the date of grant. Under the 2012 Plan, every non-employee member of the Company's Board of Directors may elect to receive a non-qualified Option or restricted stock unit grant in lieu of certain cash compensation. Upon the exercise of Options, the Company issues the resulting shares from shares reserved for issuance under the Company's Incentive Plans.

TABLE OF CONTENTS**AMPLIPHI BIOSCIENCES CORPORATION****CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS****September 30, 2014
(Unaudited)****5. Stock Options (continued)**

Under ASC 718 *Stock Compensation*, the Company is required to expense the fair value of share-based payments granted over the vesting period. The Company values Awards granted at their grant date fair value in accordance with the provisions of ASC 718 and recognizes stock-based compensation expense on a straight-line basis over the service period of each award.

Stock-based compensation expense is reduced by an estimated forfeiture rate derived from historical employee termination behavior. If the actual number of forfeitures differs from the Company's estimates, the Company may record adjustments to increase or decrease compensation expense in future periods. There were no significant adjustments related to changes in the Company's estimates for the three and nine month periods ended September 30, 2013 and 2014.

Following is a summary of the amount included as stock-based compensation expense in the accompanying consolidated statements of operations and comprehensive income (loss):

	Three Months Ended		Nine Months Ended	
	September 30, 2014	September 30, 2013	September 30, 2014	September 30, 2013
Income statement category:				
Research and development	\$ 38,000	\$ 40,000	\$ 116,000	\$ 153,000
General and administrative	195,000	208,000	643,000	1,053,000
Severance charge	831,000		831,000	
Total stock-based compensation expense	\$ 1,064,000	\$ 248,000	\$ 1,590,000	\$ 1,206,000

The following table summarizes Option activity:

	Shares	Weighted Average Exercise Price	Average Remaining Contractual Term (Years)	Intrinsic Value
Outstanding at December 31, 2013	25,721,000	\$ 0.19		

Granted				
Exercised				
Forfeited	3,137,378	0.19		
Expired	2,000	13.10		
Outstanding at September 30, 2014	22,581,622	\$ 0.19	2.15	\$ 862,982
Exercisable at September 30, 2014	19,972,558	\$ 0.19	1.35	\$ 822,989

The aggregate intrinsic value is determined using the closing price of the Company's common stock of \$0.22 on September 30, 2014.

As of September 30, 2014, the Company had unrecognized compensation cost related to unvested Options of approximately \$559,358 net of estimated forfeitures, which the Company expects to recognize over a weighted average period of approximately two and a half years.

F-13

TABLE OF CONTENTS**AMPLIPHI BIOSCIENCES CORPORATION****CONDENSED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS****September 30, 2014
(Unaudited)****5. Stock Options (continued)**

As of September 30, 2014, the Company had reserved shares of its common stock for future issuance as follows:

	Shares Reserved
Stock options outstanding	22,581,622
Available for future grants under the 2013 Stock Incentive Plan	39,250,000
Warrants	38,890,451
Total Shares reserved	99,972,073

6. Severance Charge

On September 15, 2014, by mutual agreement of the Board of Directors (the Board) of the Company and Philip J. Young, Mr. Young stepped down from his role as President and Chief Executive Officer of the Company, effective September 15, 2014. In accordance with Mr. Young's employment agreements, the Company recorded a severance charge in the quarter ended September 30, 2014 of \$1,510,000 related to severance-period compensation and benefits, as well as stock-based compensation expense related to the accelerated vesting of stock options. The composition of the severance charge is as follows:

Compensation and benefits	\$ 679,000
Stock-based compensation expenses related to accelerated vesting	831,000
Total severance charge	\$ 1,510,000

TABLE OF CONTENTS

INDEPENDENT AUDITOR S REPORT

To the Board of Directors and Shareholders
AmpliPhi Biosciences Corporation and Subsidiaries
Richmond, Virginia

We have audited the accompanying consolidated balance sheets of AmpliPhi Biosciences Corporation and Subsidiaries (the Company) as of December 31, 2013 and 2012, and the related consolidated statements of operations and comprehensive loss, stockholders equity (deficit), and cash flows for the years then ended. These financial statements are the responsibility of the Company s management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. The Company is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. Our audits included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company s internal control over financial reporting. Accordingly, we express no such opinion. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of AmpliPhi Biosciences Corporation and Subsidiaries as of December 31, 2013 and 2012, and the results of their operations and their cash flows for the years then ended, in conformity with U.S. generally accepted accounting principles.

The accompanying consolidated financial statements have been prepared assuming that the Company will continue as a going concern. As discussed in Note 2 to the consolidated financial statements, the Company has had recurring losses from operations and has an accumulated deficit that raise substantial doubt about its ability to continue as a going concern. Management s plans in regard to these matters are also described in Note 2. The consolidated financial statements do not include any adjustments that might result from the outcome of this uncertainty.

As discussed in Note 14 to the financial statements, the 2013 and 2012 financial statements have been restated to correct misstatements.

/s/ PBMares, LLP

TABLE OF CONTENTS

AmpliPhi Biosciences Corporation

Notes to Consolidated Financial Statements Year Ended December 31, 2013 (Audited)

1. Nature of Business and Significant Accounting Policies

Nature of Business

AmpliPhi Biosciences Corporation (the Company) was incorporated in the state of Washington in 1989 under the name Targeted Genetics Corporation. In February 2011, Targeted Genetics Corporation changed its name to AmpliPhi Biosciences Corporation. The Company, headquartered in Richmond, Virginia, is dedicated to developing novel antibacterial solutions called bacteriophage (phage). Phages are naturally occurring viruses that preferentially target and kill their bacterial targets.

Basis of Presentation

The consolidated financial statements include the accounts of the Company and its wholly owned subsidiaries AmpliPhi Australia Pty Ltd, Biocontrol Limited, Genovo, Inc. (inactive), and TGCF Manufacturing Corporation (inactive). All significant intercompany accounts and transactions have been eliminated.

Use of Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements, and the reported amounts of revenue and expenses during the reporting period. Actual results could differ from those estimates.

Cash and Cash Equivalents

The Company considers cash equivalents to be short-term investments that have a maturity at the time of purchase of three months or less, are readily convertible into cash and have an insignificant level of valuation risk attributable to potential changes in interest rates. Cash equivalents are recorded at cost, which approximates fair market value, and consist primarily of money market accounts.

Accounts Receivable

Accounts receivable amounts are stated at their face amounts less any allowance. Provisions for doubtful accounts are estimated based on assessment of the probable collection from specific customer accounts and other known factors. If an account was determined to be uncollectible (payment has not been made in accordance with contract terms), it would be written off against the allowance. As of December 31, 2013 and December 31, 2012, management

determined no allowance for doubtful accounts was required.

Property and Equipment

Property and equipment are recorded at cost and are depreciated using the straight-line method over the estimated useful lives of the related assets, generally three to seven years.

Prepaid Expenses and Other Current Assets

Prepaid and other current assets as of December 31, 2013 and December 31, 2012 consist primarily of prepaid insurance and deposits.

Goodwill

Costs of investments in purchased companies in excess of the underlying fair value of net assets at the date of acquisition are recorded as goodwill and assessed annually for impairment. If considered impaired, goodwill will be written down to fair value and a corresponding impairment loss recognized.

During the year ended December 31, 2012, the rights to SPH Holdings Pty Ltd's IPR&D were acquired by the business combination described in Note 11 for \$7,172,000. At December 31, 2012, goodwill in the

TABLE OF CONTENTS

AmpliPhi Biosciences Corporation

Notes to Consolidated Financial Statements Year Ended December 31, 2013 (Audited)

1. Nature of Business and Significant Accounting Policies (continued)

amount of \$2,381,000 has been recorded. In management's opinion, no goodwill has been impaired as of December 31, 2013 and December 31, 2012.

During the year ended December 31, 2011, the rights to Biocontrol IPR&D and patents were acquired by the business combination described in Note 11. At December 31, 2011, goodwill in the amount of \$1,948,000 has been recorded.

In management's opinion, no goodwill has been impaired as of December 31, 2013 and December 31, 2012.

Patents

Patents are recorded at cost and are amortized using the straight-line method over the estimated useful lives of the patents.

During the year ended December 31, 2011, the rights to Biocontrol Limited's patents were acquired by the business combination described in Note 11. At December 31, 2011, patents in the amount of \$493,000 have been recorded.

These patents are amortized over their useful life through December 2026.

Stock-Based Compensation

The Company accounts for stock-based payments under the guidance of Financial Accounting Standards Board (FASB) Accounting Standards Codification (ASC) 718, *Stock Compensation*, which requires measurement of compensation cost for all share-based payment awards at fair value on the date of grant and recognition of compensation cost over the requisite service period (typically the vesting period) for awards expected to vest.

Warrants and Preferred Shares Conversion Feature Liability

The Company accounts for warrants and preferred shares conversion feature with anti-dilution (down-round) provisions under the guidance of ASC 815, *Derivative and Hedging*, and Emerging Issue Task Force Statement 07-5: *Determining Whether an Instrument (or Embedded Feature) Is Indexed to an Entity's Own Stock*, which require the warrants and the preferred shares conversion feature to be recorded as a liability and adjusted to fair value in each reporting period.

Fair Value of Financial Assets and Liabilities Derivative Instruments

The Company measures the fair value of financial assets and liabilities in accordance with GAAP, which defines fair value, establishes a framework for measuring fair value, and requires certain disclosures about fair value measurements.

GAAP defines fair value as the exchange price that would be received for an asset or paid to transfer a liability (an exit price) in the principal or most advantageous market for the asset or liability in an orderly transaction between market participants on the measurement date. GAAP also establishes a fair value hierarchy, which requires an entity to maximize the use of observable inputs and minimize the use of unobservable inputs when measuring fair value.

GAAP describes three levels of inputs that may be used to measure fair value:

Level 1 quoted prices in active markets for identical assets or liabilities.

Level 2 quoted prices for similar assets and liabilities in active markets or inputs that are observable.

Level 3 inputs that are unobservable.

The Company does not use derivative financial instruments to hedge exposures to cash-flow, market or foreign-currency risks. However, the Company has entered into certain financial instruments and contracts, such as convertible loan notes with detachable common stock warrants and the issuance of preferred stock

TABLE OF CONTENTS

AmpliPhi Biosciences Corporation

Notes to Consolidated Financial Statements Year Ended December 31, 2013 (Audited)

1. Nature of Business and Significant Accounting Policies (continued)

with detachable common stock warrants with features that are either i) not afforded equity classification, ii) embody risks not clearly and closely related to host contracts, or iii) may be net-cash settled by the counterparty. These instruments are required to be carried as derivative liabilities, at fair value.

The Company estimates fair values of these derivatives utilizing Level 2 inputs. The Company uses the Monte Carlo valuation technique for derivatives as it embodies all of the requisite assumptions (including trading volatility, remaining term to maturity, market price, strike price, risk free rates) necessary to fair value these instruments.

Estimating fair values of derivative financial instruments, including Level 2 instruments, require the use of significant and subjective inputs that may, and are likely to, change over the duration of the instrument with related changes in internal and external market factors. In addition, option-based techniques are volatile and sensitive to changes in our trading market price, the trading market price of various peer companies and other key assumptions. Since derivative financial instruments are initially and subsequently carried at fair value, our income will reflect this sensitivity of internal and external factors.

Revenue Recognition

The Company generates revenue from technology licenses, collaborative research arrangements and agreements to provide research and development services. Revenue under technology licenses typically consists of nonrefundable, up-front license fees, technology access fees and various other payments. The Company recognizes revenue associated with performance milestones as earned, typically based upon the achievement of the specific milestones defined in the applicable agreements.

The Company recognizes revenue under research and development contracts as the related costs are incurred. When contracts include multiple elements, the Company follows ASC 605-25, *Multiple Element Arrangements*, which requires the Company to satisfy the following before revenue can be recognized:

The delivered items have value to the customer on a stand-alone basis;
Any undelivered items have objective and reliable evidence of fair value; and
Delivery or performance is probable and within the Company's control for any delivered items that have a right of return.

The Company classifies advance payments received in excess of amounts earned as deferred revenue.

Based upon the terms specified in its collaboration agreements, the Company receives advance payments from some of its collaboration partners before the project has been performed. These payments are deferred and recognized as revenue when the costs are incurred.

Research and Development Costs

In Process Research & Development (IPR&D) assets represent capitalized incomplete research projects that the Company acquired through business combinations. Such assets are initially measured at their acquisition date fair values. The fair value of the research projects is recorded as intangible assets on the consolidated balance sheet rather than expensed regardless of whether these assets have an alternative future use. The amounts capitalized are being accounted for as indefinite-lived intangible assets, subject to impairment testing until completion or abandonment of research and development efforts associated with the projects. Upon successful completion of each project, the Company will make a determination as to the then remaining useful life of the intangible asset and begin amortization.

The Company tests its indefinite-lived intangibles, including IPR&D assets, for impairment at least quarterly.

During the year ended December 31, 2012, the rights to SPH Holdings Pty Ltd's know-how and phage libraries were acquired by the business combination described in Note 9. At December 31, 2012, IPR&D in

F-22

TABLE OF CONTENTS

AmpliPhi Biosciences Corporation

Notes to Consolidated Financial Statements Year Ended December 31, 2013 (Audited)

1. Nature of Business and Significant Accounting Policies (continued)

the amount of \$5,161,000 has been recorded. In management's opinion, this IPR&D has not been impaired as of December 31, 2013 and December 31, 2012.

During the year ended December 31, 2011, the rights to Biocontrol Limited's patents and phage libraries were acquired by the business combination described in Note 9. At December 31, 2011, IPR&D in the amount of \$7,285,000 has been recorded. In management's opinion, this IPR&D has not been impaired as of December 31, 2013 and December 31, 2012.

Research and development costs include salaries, costs of outside collaborators and outside services, royalty and license costs and allocated facility, occupancy and utility expenses. The Company expenses research and development costs as incurred.

Net Loss per Common Share

Net loss per common share is based on net loss divided by the weighted average number of common shares outstanding during the period. For each fiscal year reported, the diluted net loss per share is the same as the basic net loss per share because all stock options, warrants, contingent shares, and Series B Preferred shares are antidilutive with respect to computing the net loss per share and therefore are excluded from the calculation of diluted net loss per share. The total number of shares that the Company excluded from the calculations of net loss per share were 77,490,242 shares for the year ending December 31, 2013 and 2,841,530 shares for the year ending December 31, 2012.

Recent Accounting Pronouncements

On February 5, 2013, the FASB issued ASU no. 2013-02 which adds new disclosure requirements for items reclassified out of accumulated other comprehensive income (AOCI). The ASU is intended to help entities improve the transparency of changes in other comprehensive income (OCI) and items reclassified out of AOCI in their financial statements. It does not amend any existing requirements for reporting net income or OCI in the financial statements. For public entities, the new disclosure requirements are effective for fiscal years, and interim periods within those years, beginning after December 15, 2012. For nonpublic entities, the ASU is effective for fiscal years beginning after December 15, 2013, and interim and annual periods thereafter. The Company elected to early adopt this standard which did not result in any changes to the consolidated financial statements.

2. Liquidity

The Company has prepared the accompanying consolidated financial statements on a going concern basis, which assumes that the Company will realize its assets and satisfy its liabilities in the normal course of business. However, the Company has incurred net losses since its inception, has negative operating cash flows and has an accumulated deficit of \$378.1 million and \$320.4 million as of December 31, 2013 and December 31, 2012, respectively. These circumstances raise substantial doubt about the Company's ability to continue as a going concern. The accompanying financial statements do not include any adjustments to reflect the possible future effects on the recoverability and classification of assets or the amounts and classifications of liabilities that may result from the outcome of the uncertainty concerning the Company's ability to continue as a going concern.

F-23

TABLE OF CONTENTS**AmpliPhi Biosciences Corporation****Notes to Consolidated Financial Statements
Year Ended December 31, 2013
(Audited)****2. Liquidity (continued)**

The Company believes that its current resources will only be sufficient to fund operations into the first quarter of 2015. This estimate is based on the Company's ability to manage its staffing expenses and its working capital and actual results could differ from its estimates. The Company is seeking additional financing in order to fund operations through 2015; however, the Company cannot provide assurances that it will be successful in obtaining additional financing for these periods or as needed in the future. If the Company does not raise additional funds by the first quarter of 2015, it plans to implement cost reduction measures, such as a reduction in workforce, reducing its intellectual property prosecution, reducing other operating activities, and/or the pursuit of alternative financing transactions that would likely be on terms disadvantageous to the Company and dilutive to its shareholders. The Company could also be required to relinquish rights to its technology or product candidates or in-licensed technology on unfavorable terms, either of which would reduce the ultimate value of the technology or product candidates, or to sell assets likely at values significantly below their potential worth. If the Company is unable to secure additional capital, it may be required to cease operations, declare bankruptcy or otherwise wind up its business.

3. Property and Equipment

Property and equipment consist of the following:

	December 31,	
	2013	2012
Furniture and equipment	\$ 618,000	\$ 527,000
Less: accumulated depreciation	(473,000)	(391,000)
Total furniture and equipment, net	\$ 145,000	\$ 136,000

Depreciation expense totaled \$82,000 and \$60,000 for the years ended December 31, 2013 and 2012, respectively.

During the year ended December 31, 2012, the Company sold or disposed of certain property and equipment no longer used as a result of the reprioritization of its business priorities. The Company recognized a net loss of \$30,000 on the disposal of property and equipment in the consolidated statements of operations for the year ended December 31, 2012.

4. Income Taxes

Significant components of our US and UK deferred tax assets and liabilities were as follows:

	December 31,	
	2013	2012
Deferred tax assets		
Net operating loss carry-forwards	\$ 60,765,000	\$ 57,774,000
Research and orphan drug credit carry-forwards	3,700,000	4,297,000
Depreciation and amortization	(4,000)	2,000
Restructure and other	1,121,000	467,000
Gross deferred tax assets	65,582,000	62,540,000
Valuation allowance for deferred tax assets	(65,582,000)	(62,540,000)
Net deferred tax asset	\$	\$

The change in the valuation allowance was a \$3.0 million increase in 2013 and a \$5.5 million decrease in 2012.

AmpliPhi Biosciences Corporation

Notes to Consolidated Financial Statements Year Ended December 31, 2013 (Audited)

4. Income Taxes (continued)

At December 31, 2013, the Company had US and UK net operating loss carry-forwards, or NOLs, of approximately \$175.4 million and research tax credit carry-forwards of approximately \$3.7 million. The carry-forwards began to expire in 2012, and may be further subject to the application of Section 382 of the Internal Revenue Code of 1986 or the Code, as discussed further below. The Company has provided a valuation allowance to offset the deferred tax assets due to the uncertainty of realizing the benefits of the net deferred tax asset.

The Company's past sales and issuances of stock have likely resulted in ownership changes as defined by Section 382 of the Code. A study has not been done at this time because the full valuation allowance eliminating potential profit and loss adjustments due to changes in the gross amount of the NOLs and credits would be offset by a change in the valuation allowance. It is possible that a future analysis may result in the conclusion that a substantial portion, or perhaps substantially all, of the NOLs and credits will expire due to the limitations of Sections 382 and 383 of the Code. As a result, the utilization of the NOLs and tax credits may be limited and a portion of the carry-forwards may expire unused.

The Company does not have any material unrecognized tax benefits as of December 31, 2013.

The Company is subject to income taxes in the U.S. federal jurisdiction as well as in the United Kingdom for any activity of Biocontrol Ltd and in Australia for any activity of Special Phage Holdings Pty Ltd. Tax regulations within each jurisdiction are subject to the interpretation of the related tax laws and regulations and require significant judgment to apply. The Company is subject to U.S. federal tax examinations by tax authorities for the years 1998 to 2012 due to the fact that NOLs exist going back to 1998 that may be utilized on a current or future year tax return.

The Company has a policy of recognizing tax related interest and penalties as additional tax expense. During the years ended December 31, 2013, and 2012 the Company did not recognize any interest and penalties.

5. Commitments and Contingencies

As part of the acquisition of SPH Holdings Pty Ltd (Note 11), the Company paid \$100,000 and issued an additional 2,000,000 shares of common stock to Cellabs Pty Ltd (Cellabs) as part of a repayment agreement for its outstanding loans to SPH Holdings Pty Ltd. In January 2013, the Company paid an additional \$50,000 to Cellabs. The remaining loan balance of \$200,000 was paid in December 2013.

In February 2011, the Company entered into an agreement with Virginia Biotechnology Research Partnership Authority for Richmond, Virginia laboratory space. This agreement had a contractual expiration date of February 29, 2012 at which time it converted to a rolling three-month lease. At December 31, 2013, the Company's minimum

payment commitment for the Company's Richmond, Virginia laboratory space was \$4,800.

In December 2011, the Company entered into an agreement with Nevis Limited and Charter Limited for laboratory space in Bedfordshire, United Kingdom. This agreement has a minimum period of 3 years and a contractual expiration date of December 8, 2016. At December 31, 2013, the Company's minimum payment commitment for the Company's Bedfordshire laboratory space was \$127,000.

In February 2013, we entered into an agreement with Office Suites Plus (now Regus Management Group, LLC) for office space in Glen Allen, Virginia. The agreement has a minimum period of one year ending February 28, 2014, at which time it was extended through June 2014, with a monthly cost of \$2,555. At December 31, 2013, our minimum payment commitment for the Glen Allen space was \$5,110.

F-25

TABLE OF CONTENTS

AmpliPhi Biosciences Corporation

Notes to Consolidated Financial Statements Year Ended December 31, 2013 (Audited)

5. Commitments and Contingencies (continued)

In September 2013, we entered into an agreement with PBC Carlsbad, LLC for office space in Carlsbad, California. The agreement has a minimum period of six months ending February 28, 2014, at which time it was extended through August 2014, with a monthly cost of \$1,033. At December 31, 2013, our minimum payment commitment for the Carlsbad office space was \$2,066.

The Company recognized rent expense under operating leases of \$214,000 in 2013 and \$146,000 in 2012.

The Company is subject to legal claims and actions related to the operations of its business. The Company does not expect the ultimate outcome of any such actions to have a material impact on its consolidated financial position or results of operations.

6. Collaborative and Other Agreements

In June 2013, the Company entered into a Collaborative Research and Development Agreement (CRADA) with the United States Army Medical Research and Materiel Command (USAMRMC) and the Walter Reed Army Institute of Research (WRAIR). The CRADA will focus on developing and commercializing bacteriophage therapeutics to treat *S. aureus*, *E. coli* and *P. aeruginosa* infections.

In March 2013, the Company entered into an Exclusive Channel Collaboration Agreement with Intrexon Corporation. This agreement allows the Company to utilize Intrexon's synthetic biology platform for the identification, development and production of bacteriophage-containing human therapeutics. The Company paid a one-time technology access fee to Intrexon of \$3,000,000 in common stock. The Company shall pay Intrexon, in cash or stock, milestone fees for the initiation of a Phase 2 trial of \$2,500,000 upon commencement of the first Phase 2 trial and \$5,000,000 upon the first regulatory approval of any product in any major market country. With regard to each product sold by the Company, the Company will pay, in cash, tiered royalties on a quarterly basis based on net sales of AmpliPhi Products, calculated on a product-by-product basis.

7. Preferred Shares

On June 13, 2013, the Company's Board of Directors approved a resolution designating 10,016,080 shares of Preferred Stock as Series B Convertible Preferred Stock with an initial stated value of \$1.40 and par value of \$0.01. Each Series B preferred share is convertible into 10 shares of common stock and is entitled to the number of votes equal to the number of shares of common stock. These Series B shares may be converted to common stock by the holder of the shares at any time. The Series B shares shall be automatically converted into common shares upon the closing of an

underwritten initial public offering with aggregate proceeds to the Company of at least \$7 million and a price per share to the public of at least the Series B stated value upon the closing of which the shares of common stock of the Company shall be listed for trading on the New York Stock Exchange. Until conversion, the holders of Series B Preferred shares shall be entitled to receive dividends of 10% of the Series B stated value per annum.

In connection with the private placement of Series B Convertible Preferred Stock, the Company recorded a liability for a complex embedded derivative that required bifurcation under ASC Section 815. The embedded derivative includes a redemption feature, multiple dividend features, as well as multiple conversion features with a down-round ratchet provision. The Company estimates the fair values of the conversion feature using a Monte Carlo valuation model. The Company measured the fair value of the conversion feature on June 26, 2013 and July 15, 2013 (dates of issuance) and recorded the initial liability as part of the private placement proceeds.

On June 26, 2013, the Company issued 4,999,999 shares of the Company's newly-created Series B Convertible Preferred Stock and warrants that would each be used to purchase 12,499,996 shares of common stock at an exercise price of \$0.14 per share for an aggregate purchase price of \$7.0 million. The value of the

TABLE OF CONTENTS

AmpliPhi Biosciences Corporation

7. Preferred Shares (continued)

derivative liability related to the warrants was \$1,886,000 and the value of the derivative liability related to the preferred shares was \$5,064,000. As part of the same transaction, the Company converted \$5,491,000 in outstanding convertible loan notes (principal and interest) into 4,357,936 shares of Series B Convertible Preferred Stock and warrants to purchase 10,894,839 shares of common stock at an exercise price of \$0.14 per share. The value of the derivative liability related to the warrants was \$1,644,000 and the value of the derivative liability related to the preferred shares was \$3,804,000. As part of this issuance, the Company issued warrants to purchase 4,999,999 shares of common stock at an exercise price of \$0.14 per share with an initial fair value of \$759,000 and paid \$350,000 to the placement agents. As a result of this financing, all outstanding convertible notes were converted into shares of Series B Convertible Preferred Stock and warrants to purchase common stock. On July 15, 2013, the remaining outstanding convertible loan notes, totaling \$829,277 in principal and interest, were converted into 658,145 shares of Series B Convertible Preferred Stock and warrants to purchase 1,645,361 shares of common stock at an exercise price of \$0.14 per share. The value of the derivative liability related to the warrants was \$674,000 and the value of the derivative liability related to the preferred shares was \$155,000.

On July 25, 2013, 1,132,875 preferred shares were converted into 11,328,750 shares of common stock. In connection with the conversion, a loss on derivative of \$5,035,000 was recorded in relation to the conversion. \$6,518,000 was reclassified from the derivative liability to equity due to conversion.

On October 17, 2013, 23,227 preferred shares were converted into 232,270 shares of common stock. In connection with the conversion, a gain on the derivative liability was recorded in the amount of \$1,625. Due to this conversion, \$97,000 was reclassified out of the derivative liability account and into equity.

The Company re-measured the fair value of the conversion feature and recorded \$32,035,000 in total charges to record the liabilities associated with the conversion feature at their estimated fair value totaling \$34,443,000 as of December 31, 2013.

8. Stock Options and Warrants

The Company follows ASC 815-40, *Contracts in an Entity's Own Equity*, as it relates to outstanding warrants. No warrants were exercised through December 31, 2013.

In connection with the December 2013 private placement of 72,007,000 shares of the Company's common stock at a price per share of \$0.25, the Company issued an aggregate of warrants to purchase 4,320,420 shares of common stock at an exercise price of \$0.25 per share to the placement agents. These warrants expire December 2018. These warrants contain provisions that protect holders from a decline in the issue price of the Company's common stock (down-round

provision) and contain net settlement provisions. Due to these provisions, the Company accounted for these warrants as liabilities instead of equity.

In connection with the private placement of Series B Convertible Preferred Stock, which occurred through two closings on June 26, 2013 and July 15, 2013, respectively, the Company issued an aggregate of warrants to purchase 30,040,194 shares of common stock at an exercise price of \$0.14 per share. These warrants expire June 2018. These warrants contain provisions that protect holders from a decline in the issue price of the Company's common stock (down-round provision) and contain net settlement provisions. Due to these provisions, the Company accounted for these warrants as liabilities instead of equity. The Company measured the fair value of these warrants on June 26, 2013 and July 15, 2013 and recorded the initial liability as part of the private placement proceeds and expensed \$759,000 for the warrants issued to the placement agent.

F-27

TABLE OF CONTENTS**AmpliPhi Biosciences Corporation****Notes to Consolidated Financial Statements
Year Ended December 31, 2013
(Audited)****8. Stock Options and Warrants (continued)**

We estimate the fair values of these securities using a Monte Carlo valuation model. The following warrants were issued in 2013 using the Monte Carlo valuation method with the key inputs as follows:

	June 26, 2013	July 15, 2013	December 23, 2013
Warrants Issued	28,394,834	1,645,360	4,320,420
Risk free interest rate	.0109	.0109	0.0167
Volatility	160.94 %	163.08 %	155.24 %
Expected term	5 years	5 years	5 years
Exercise price	\$0.14	\$0.14	\$0.25

The Company re-measured the fair value of these warrants and recorded \$10,282,000 in charges to record the liabilities associated with these warrants at their estimated fair values totaling \$16,664,000 as of December 31, 2013.

From February through May 2013, in connection with the issuance of new convertible promissory notes, the Company issued warrants to purchase up to 7,030,387 shares of its common stock. These warrants expire February through May 2018 and are exercisable at a price of \$0.14 per share. These warrants are considered to be equity.

On December 22, 2011, in connection with the Biocontrol business combination, the Company issued warrants to purchase up to 1,355,164 shares of its common stock. These warrants expire in December 2016 and are exercisable at a price of \$0.46 per share. These warrants are considered to be equity.

Stock-Based Compensation

The Company's Stock Incentive Plan provides for the issuance of long-term incentive awards, or awards, in the form of non-qualified and incentive stock options, or Options, stock appreciation rights, stock grants and restricted stock units. The awards may be granted by the Company's Board of Directors to its employees, directors and officers and to consultants, agents, advisors and independent contractors who provide services to the Company. The exercise price for Options must not be less than the fair market value of the underlying shares on the date of grant. Options expire no later than ten years from the date of grant and generally vest and become exercisable over a four-year period following the date of grant. Every non-employee member of the Company's Board of Directors receives an annual non-qualified

Option or restricted stock unit grant. Upon the exercise of Options, the Company issues the resulting shares from shares reserved for issuance under the Company's Incentive Plan.

Under ASC 718, *Stock Compensation*, the Company is required to expense the fair value of share-based payments granted over the vesting period. The Company values Awards granted at their grant date fair value in accordance with the provisions of ASC 718 and recognizes stock-based compensation expense on a straight-line basis over the service period of each award.

Stock-based compensation expense is reduced by an estimated forfeiture rate derived from historical employee termination behavior. If the actual number of forfeitures differs from the Company's estimates, the Company may record adjustments to increase or decrease compensation expense in future periods. There were no significant adjustments related to changes in the Company's estimates for the year ended December 31, 2013 and year ended December 31, 2012.

F-28

TABLE OF CONTENTS**AmpliPhi Biosciences Corporation****Notes to Consolidated Financial Statements
Year Ended December 31, 2013
(Audited)****8. Stock Options and Warrants (continued)**

Following is a summary of the amount included as stock-based compensation expense in the accompanying consolidated statements of operations and comprehensive gain (loss):

	Year Ended December 31, 2013	Year Ended December 31, 2012
Stock options:		
Research and development expense	\$ 191,000	\$
General and administrative expense	1,246,000	2,000
Restricted stock units:		
Research and development expense		
General and administrative expense		7,000
Total stock-based compensation expense	\$ 1,437,000	\$ 9,000

The following table summarizes Option activity:

	Shares	Weighted Average Exercise Price	Average Remaining Contractual Term (Years)	Intrinsic Value
Outstanding at December 31, 2012	13,749,552	\$ 0.21		
Granted	12,350,000	0.18		
Exercised	(91,677)	0.20		
Forfeited	(284,375)	0.20		
Expired	(2,500)	5.70		
Outstanding at December 31, 2013	25,721,000	\$ 0.19	9.15	\$ 6,451,441
Exercisable at December 31, 2013	8,619,584	\$ 0.19	9.15	\$ 2,776,669

The aggregate intrinsic value is determined using the closing price of the Company's common stock of \$0.50 on December 31, 2013.

As of December 31, 2013, the Company had unrecognized compensation cost related to unvested Options of approximately \$2,219,000 net of estimated forfeitures, which the Company expects to recognize over a weighted

average period of approximately three years.

The fair value of each Option is estimated on the date of grant using the Black-Scholes valuation method with the key inputs as follows:

	Years Ended		December 31,	
	2013		2012	
Risk-free interest rate	1.13	%	0.6	%
Expected volatility	160.9	%	172.1	%
Expected term (in years)	4.0		4.0	
Expected dividend yield	0.0	%	0.0	%

8. Stock Options and Warrants (continued)

Reserved Shares

As of October 20, 2014, the Company had reserved shares of its common stock for future issuance as follows:

	Shares Reserved
Stock options outstanding	25,721,000
Available for future grants under the Stock Incentive Plan	10,658,083
Warrants	42,746,165
Total Shares reserved	79,125,248

9. Discontinued Operations

In June 2012, the Company sold all of its assets used in its gene therapy business including process development, quality control, quality assurance, manufacturing and bioanalytical functions for \$3.0 million. In addition to this cash consideration, the Company may receive a long term royalty of 1.75% on certain product sales. This royalty may be completely canceled at any time by a one-time payment of \$1.75 million.

10. Employee Retirement Plan

The Company sponsors an employee retirement plan under Section 401(k) of the Internal Revenue Code of 1986, as amended. All of the Company's employees who meet minimum eligibility requirements are eligible to participate in the plan. Matching contributions to the 401(k) plan are made at the discretion of the Company's Board of Directors. The Company suspended matching contributions effective January 1, 2009.

11. Business Combinations

On November 9, 2012, the Company acquired Australia-based Special Phage Services (SPS). The acquisition of SPS primarily focused on IPR&D being performed on S. aureus infections, which is currently being developed under AmpliPhage-002: Wound and Skin Infections Caused by S. aureus.

In a share exchange transaction, AmpliPhi Australia Pty Limited, a wholly owned subsidiary of US-based AmpliPhi, acquired Sydney-based SPH, the holding company of SPS. Under the terms of the acquisition, the Company offered

40 million shares of its common stock in exchange for 100% of the fully diluted share capital of SPH. 20 million shares are held in escrow, 8 million to satisfy potential warranty claims under the transaction documents and the remaining 12 million shares are held pending completion of certain milestones. At December 31, 2012, IPR&D in the amount of \$5,161,000 and goodwill in the amount of \$2,381,000 have been recorded. In management's opinion, this IPR&D and goodwill have not been impaired as of December 31, 2013 and December 31, 2012. As part of this transaction, the Company acquired \$260,000 in assets to include a \$221,000 receivable for an Australian research and development tax refund, \$37,000 in equipment, and \$2,000 in cash. The Company also assumed liabilities of \$613,000. On November 9, 2013, the 8 million shares held to satisfy potential warranty claims were released.

On January 6, 2011, the Company acquired Biocontrol, a clinical development stage biotechnology company in the United Kingdom (the Acquisition). The acquisition of Biocontrol included an IPR&D project related to AmpliPhage-001: Lung Infections in Cystic Fibrosis (CF) Patients Caused by *P. aeruginosa*.

The Company acquired 100% of the voting stock of Biocontrol and issued 22,817,198 shares of its common stock to the Biocontrol shareholders with a total fair value of approximately \$8.6 million as of January 6, 2011. The Acquisition was made through an acquisition subsidiary, which has continued post-Acquisition as Biocontrol. At December 31, 2011, IPR&D in the amount of \$7,285,000, goodwill in the

TABLE OF CONTENTS

AmpliPhi Biosciences Corporation

11. Business Combinations (continued)

amount of \$1,948,000, and patents in the amount of \$493,000 have been recorded. In management's opinion, this IPR&D and goodwill have not been impaired as of December 31, 2013 and December 31, 2012. The patents are being amortized over their useful life through December 2026.

12. Convertible Loan Notes

On February 1, 2013, the Company's Board of Directors approved the issuance of new convertible promissory notes in an aggregate principal amount not to exceed \$7,500,000, together with warrants to purchase shares of common stock of the Company. Interest on the unpaid principal balance of these notes shall accrue from the investment date at the rate of ten percent (10%) per annum. The warrants have the right to purchase the number of shares of the Company's common stock equal to twenty five percent (25%) of the principal amount of such holder's note divided by \$0.14. The company issued \$2,000,000 in new convertible loan notes from February through May 2013, converted \$1,900,000 of previous convertible loan notes and accrued interest into this new security, and issued warrants for 7,030,387 share of common stock.

As a result of the private placement of Series B Convertible Preferred Stock that consisted of two closings, occurring on June 26, 2013 and July 15, 2013, respectively, all outstanding convertible notes were converted into shares of Series B Convertible Preferred Stock and warrants to purchase shares of common stock at an exercise price of \$0.14 per share. On June 26, 2013, as part of the first closing, the Company converted \$5,491,001 in outstanding convertible loan notes into 4,357,936 shares of Series B Convertible Preferred Stock and warrants to purchase 10,894,839 shares of common stock at an exercise price of \$0.14 per share. On July 15, 2013, the remaining outstanding convertible loan notes, totaling \$829,277, were converted into 658,145 shares of Series B Convertible Preferred Stock and warrants to purchase 1,645,361 shares of common stock at an exercise price of \$0.14 per share. \$233,000 of interest expense was accrued for all convertible loan notes held through July 15, 2013.

13. Related Parties

During the years ended December 31, 2013 and December 31, 2012, \$110,000 and \$30,000, respectively, were recognized in General and Administrative expenses for management and accounting consultancy fees provided by two shareholders. The Company shares resources in the new Australian operations such as facility space, electricity, insurance, and equipment with Cellabs, owned by a shareholder, and receives a quarterly invoice for these services. The total expense for these services for the year ended December 31, 2013 was \$70,000 and for December 31, 2012 was \$6,000. As part of the acquisition of SPH (Note 11), the Company also entered into a loan repayment agreement with Cellabs (Note 5) which was paid in full during 2013. As of December 31, 2013 and December 31, 2012,

\$152,000 and \$562,000, respectively, of current liabilities are due to related parties.

14. Correction of Errors

The Company's previously issued December 31, 2013 financial statements have been restated to remove deemed dividends booked on the issuance of preferred shares and to recognize the increase in derivative expense due to adding several features to the valuation model used to measure the compound derivatives and changing from a Black-Scholes valuation model to a Monte Carlo valuation model. Additional paid in capital and accumulated deficit have been reduced by \$8,464,000 after removing the deemed dividends. Loss on derivative liabilities increased by \$1,755,000 to \$42,317,000 due to the change in the valuation model.

The Company also contracted a valuation team to review the purchase price allocation of Biocontrol. As a result, in process research and development (IPR&D) was restated and a new intangible asset, patents, was recognized. For the Biocontrol acquisition, \$493,000 of IPR&D was reclassified to patents. In addition, amortization expense for patents of \$31,000 was recognized in both 2012 and 2013.

F-31

TABLE OF CONTENTS

AmpliPhi Biosciences Corporation

**Notes to Consolidated Financial Statements
Year Ended December 31, 2013
(Audited)**

14. Correction of Errors (continued)

As a result of these corrections, the Company's net loss in 2013 increased \$1,787,000 to \$57,648,000. The net loss per share decreased by \$0.07 per share to \$(0.57) per share which also reflects the removal of the deemed dividends.

15. Common Stock

In December 2013, the Company issued 72,007,000 shares of the Company's common stock at a price per share of \$0.25. As part of this private placement, the Company issued warrants to purchase 4,320,420 shares of common stock at an exercise price of \$0.25 per share with an initial fair value of \$1,442,000 and paid \$1,115,000 to the placement agents.

16. Subsequent Events

On February 11, 2014, the Company held a special meeting of shareholders at which the shareholders approved the planned reincorporation of the Company as a Delaware corporation, a reverse stock split in a ratio at least one-for-five and up to one-for-twenty (with the timing and specific ratio to be determined by the board of directors and to be effected prior to the reincorporation), the execution of indemnification agreements with the Company's directors and certain officers, and the adoption of the Company's 2013 Stock Incentive Plan (pursuant to which 39,250,000 shares of common stock are reserved for issuance, before giving effect to the reverse stock split).

TABLE OF CONTENTS

INDEPENDENT AUDITOR S REPORT

To the Board of Directors and Shareholders
AmpliPhi Biosciences Corporation and Subsidiaries
Richmond, Virginia

We have audited the accompanying consolidated balance sheets of AmpliPhi Biosciences Corporation and Subsidiaries (the Company) as of December 31, 2012 and 2011, and the related consolidated statements of operations and comprehensive loss, stockholders equity (deficit), and cash flows for the years then ended. These consolidated financial statements are the responsibility of the Company s management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. The Company is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. Our audits included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company s internal control over financial reporting. Accordingly, we express no such opinion. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the consolidated financial statements, assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of AmpliPhi Biosciences Corporation and Subsidiaries as of December 31, 2012 and 2011, and the results of their operations and their cash flows for the years then ended, in conformity with U.S. generally accepted accounting principles.

The accompanying consolidated financial statements have been prepared assuming that the Company will continue as a going concern. As discussed in Note 2 to the consolidated financial statements, the Company has had recurring losses from operations and has an accumulated deficit that raise substantial doubt about its ability to continue as a going concern. Management s plans in regard to these matters are also described in Note 2. The consolidated financial statements do not include any adjustments that might result from the outcome of this uncertainty.

As discussed in Note 12 to the consolidated financial statements, the 2012 and 2011 consolidated financial statements have been restated to correct a misstatement.

/s/ PBMares, LLP

TABLE OF CONTENTS

AmpliPhi Biosciences Corporation

Notes to Consolidated Financial Statements Year Ended December 31, 2011 and 2012

1. Nature of Business and Significant Accounting Policies

Nature of Business

AmpliPhi Biosciences Corporation (the Company) was incorporated in the state of Washington in 1989 under the name Targeted Genetics Corporation. In February 2011, Targeted Genetics Corporation changed its name to AmpliPhi Biosciences Corporation. The Company, headquartered in Richmond, Virginia, is dedicated to developing novel antibacterial solutions called bacteriophage (phage). Phages are naturally occurring viruses that preferentially target and kill their bacterial targets.

Basis of Presentation

The consolidated financial statements include the accounts of the Company and its wholly owned subsidiaries AmpliPhi Australia Pty Ltd, Biocontrol Limited, Genovo, Inc. (inactive), and TGCF Manufacturing Corporation (inactive). All significant intercompany accounts and transactions have been eliminated. All numbers on the financial statements and disclosures have been rounded to the nearest 1,000.

Use of Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements, and the reported amounts of revenue and expenses during the reporting period. Actual results could differ from those estimates.

Cash and Cash Equivalents

The Company considers cash equivalents to be short-term investments that have a maturity at the time of purchase of three months or less, are readily convertible into cash and have an insignificant level of valuation risk attributable to potential changes in interest rates. Cash equivalents are recorded at cost, which approximates fair market value, and consist primarily of money market accounts.

Restricted Cash

The Company maintains a cash account for the payment of employee wages through HR Novations.

Accounts Receivable

Accounts receivable amounts are stated at their face amounts less any allowance. Provisions for doubtful accounts are estimated based on assessment of the probable collection from specific customer accounts and other known factors. If an account was determined to be uncollectible (payment has not been made in accordance with contract terms), it would be written off against the allowance. As of December 31, 2012 and 2011, management determined no allowance for doubtful accounts was required.

Property and Equipment

Property and equipment are recorded at cost and are depreciated using the straight-line method over the estimated useful lives of the related assets, generally three to seven years.

Prepaid Expenses and Other Current Assets

Prepaid and other current assets as of December 31, 2012 and 2011 consist primarily of prepaid insurance and deposits.

Goodwill

Costs of investments in purchased companies in excess of the underlying fair value of net assets at the date of acquisition are recorded as goodwill and assessed annually for impairment. If considered impaired, goodwill will be written down to fair value and a corresponding impairment loss recognized.

TABLE OF CONTENTS

AmpliPhi Biosciences Corporation

Notes to Consolidated Financial Statements Year Ended December 31, 2011 and 2012

1. Nature of Business and Significant Accounting Policies (continued)

During the year ended December 31, 2012, the rights to SPH Holdings Pty Ltd's know-how and phage libraries were acquired by the business combination described in Note 9 for \$7,172,000. At December 31, 2012, goodwill in the amount of \$2,381,000 has been recorded. In management's opinion, no goodwill has been impaired as of December 31, 2012.

During the year ended December 31, 2011, the rights to Biocontrol Limited's patents and phage libraries were acquired by the business combination described in Note 9 for \$8,584,000. At December 31, 2011, goodwill in the amount of \$1,948,000 has been recorded. In management's opinion, no goodwill has been impaired as of December 31, 2012 and December 31, 2011.

Patents

Patents are recorded at cost and are amortized using the straight-line method over the estimated useful lives of the patents.

During the year ended December 31, 2011, the rights to Biocontrol Limited's patents were acquired by the business combination described in Note 9. At December 31, 2011, patents in the amount of \$493,000 have been recorded. These patents are amortized over their useful life through December 2026.

Research and Development Costs

In Process Research & Development (IPR&D) assets represent capitalized incomplete research projects that the Company acquired through business combinations. Such assets are initially measured at their acquisition date fair values. The fair value of the research projects is recorded as intangible assets on the consolidated balance sheet rather than expensed regardless of whether these assets have an alternative future use. The amounts capitalized are being accounted for as indefinite-lived intangible assets, subject to impairment testing until completion or abandonment of research and development efforts associated with the projects. Upon successful completion of each project, the Company will make a determination as to the then remaining useful life of the intangible asset and begin amortization.

The Company tests its indefinite-lived intangibles, including IPR&D assets, for impairment at least quarterly.

During the year ended December 31, 2012, the rights to SPH Holdings Pty Ltd's know-how and phage libraries were acquired by the business combination described in Note 9 for \$7,172,000. At December 31, 2012, IPR&D in the amount of \$5,161,000 has been recorded. In management's opinion, this IPR&D has not been impaired as of December 31, 2012.

During the year ended December 31, 2011, the rights to Biocontrol Limited's patents and phage libraries were acquired by the business combination described in Note 9 for \$8,584,000. At December 31, 2011, IPR&D in the amount of \$7,285,000 has been recorded. In management's opinion, this IPR&D has not been impaired as of December 31, 2012 and December 31, 2011.

Research and development costs include salaries, costs of outside collaborators and outside services, royalty and license costs and allocated facility, occupancy and utility expenses. The Company expenses research and development costs as incurred.

Stock-based Compensation

The Company accounts for stock-based payments under the guidance of Financial Accounting Standards Board (FASB) Accounting Standards Codification (ASC) 718-10, *Stock Compensation*, which requires measurement of compensation cost for all share-based payment awards at fair value on the date of grant and recognition of compensation cost over the requisite service period (typically the vesting period) for awards expected to vest.

F-39

TABLE OF CONTENTS

AmpliPhi Biosciences Corporation

Notes to Consolidated Financial Statements Year Ended December 31, 2011 and 2012

1. Nature of Business and Significant Accounting Policies (continued)

Revenue Recognition

The Company generates revenue from technology licenses, collaborative research arrangements and agreements to provide research and development services. Revenue under technology licenses typically consists of nonrefundable, up-front license fees, technology access fees and various other payments. The Company recognizes revenue associated with performance milestones as earned, typically based upon the achievement of the specific milestones defined in the applicable agreements.

The Company recognizes revenue under research and development contracts as the related costs are incurred. When contracts include multiple elements, the Company follows ASC 605-25, *Multiple Element Arrangements*, which requires the Company to satisfy the following before revenue can be recognized:

The delivered items have value to the customer on a stand-alone basis;
Any undelivered items have objective and reliable evidence of fair value; and
Delivery or performance is probable and within the Company's control for any delivered items that have a right of return.

The Company classifies advance payments received in excess of amounts earned as deferred revenue.

Based upon the terms specified in its collaboration agreements, the Company receives advance payments from some of its collaboration partners before the project has been performed. These payments are deferred and recognized as revenue when the costs are incurred.

Net Loss per Common Share

Net loss per common share is based on net loss divided by the weighted average number of common shares outstanding during the period. For each fiscal year reported, the diluted net loss per share is the same as the basic net loss per share because all stock options, warrants and contingent shares are antidilutive with respect to computing the net loss per share and therefore are excluded from the calculation of diluted net loss per share. The total number of shares that the Company excluded from the calculations of net loss per share were 2,841,530 shares for the year ending December 31, 2012. For the year ending December 31, 2011, there were no dilutive shares.

Recent Accounting Pronouncements

In September 2011, the FASB issued Accounting Standards Update (ASU) no. 2011-08, Intangibles – Goodwill and Other (Topic 350): Testing Goodwill for Impairment that simplifies how public and nonpublic entities test goodwill

for impairment. The amendments permit an entity to first assess qualitative factors to determine whether it is more likely than not that the fair value of a reporting unit is less than its carrying amount as a basis for determining whether it is necessary to perform the two-step goodwill impairment test described in FASB Accounting Standards Codification Topic 350. The more-likely-than-not threshold is defined as having a likelihood of more than 50%. The guidance also includes examples of the types of events and circumstances to consider in conducting the qualitative assessment. The amendments will be effective for annual and interim goodwill impairment tests performed for fiscal years beginning after December 15, 2011. The Company elected to early adopt this standard and used these new guidelines in assessing goodwill impairment for the consolidated financial statements.

On February 5, 2013, the FASB issued ASU no. 2013-02 which adds new disclosure requirements for items reclassified out of accumulated other comprehensive income (AOCI). The ASU is intended to help entities improve the transparency of changes in other comprehensive income (OCI) and items reclassified out of AOCI in their financial statements. It does not amend any existing requirements for reporting net income or OCI in the financial statements. For public entities, the new disclosure requirements are effective for fiscal years, and interim periods within those years, beginning after December 15, 2012. For nonpublic

F-40

TABLE OF CONTENTS

AmpliPhi Biosciences Corporation

1. Nature of Business and Significant Accounting Policies (continued)

entities, the ASU is effective for fiscal years beginning after December 15, 2013, and interim and annual periods thereafter. The Company elected to early adopt this standard which did not result in any changes to the consolidated financial statements.

On February 5, 2013, the FASB issued ASU no. 2013-02 which adds new disclosure requirements for items reclassified out of accumulated other comprehensive income (AOCI). The ASU is intended to help entities improve the transparency of changes in other comprehensive income (OCI) and items reclassified out of AOCI in their financial statements. It does not amend any existing requirements for reporting net income or OCI in the financial statements. For public entities, the new disclosure requirements are effective for fiscal years, and interim periods within those years, beginning after December 15, 2012. For nonpublic entities, the ASU is effective for fiscal years beginning after December 15, 2013, and interim and annual periods thereafter. The Company elected to early adopt this standard which did not result in any changes to the consolidated financial statements.

2. Liquidity

The Company has prepared the accompanying consolidated financial statements on a going concern basis, which assumes that the Company will realize its assets and satisfy its liabilities in the normal course of business. However, the Company has incurred net losses since its inception, has negative operating cash flows and has an accumulated deficit of \$320.4 million as of December 31, 2012. These circumstances raise substantial doubt about the Company's ability to continue as a going concern. The Company's cash balance as of December 31, 2012 was \$862,000, the accounts receivable balance was \$641,000 and the current liabilities were \$6,050,000. \$4,113,000 of the current liabilities are the convertible loan notes and accrued interest that may be converted to another security and extend the maturity date. The accompanying financial statements do not include any adjustments to reflect the possible future effects on the recoverability and classification of assets or the amounts and classifications of liabilities that may result from the outcome of the uncertainty concerning the Company's ability to continue as a going concern.

The Company believes that its current resources, in addition to the revenue received in February and March 2013 detailed in the Subsequent Events disclosure (Note 13), will only be sufficient to fund operations into the second quarter of 2013. This estimate is based on the Company's ability to manage its staffing expenses and its working capital and actual results could differ from its estimates. The Company is seeking additional financing in order to fund operations through 2013; however, the Company cannot provide assurances that it will be successful in obtaining additional financing for these periods or as needed in the future. If the Company does not raise additional funds by the second quarter of 2013, it plans to implement cost reduction measures, such as a reduction in workforce, reducing its intellectual property prosecution, reducing other operating activities, and/or the pursuit of alternative financing transactions that would likely be on terms disadvantageous to the Company and dilutive to its shareholders. The

Company could also be required to relinquish rights to its technology or product candidates or in-licensed technology on unfavorable terms, either of which would reduce the ultimate value of the technology or product candidates, or to sell assets likely at values significantly below their potential worth. If the Company is unable to secure additional capital, it may be required to cease operations, declare bankruptcy or otherwise wind up its business.

3. Property and Equipment

Property and equipment consist of the following:

	December 31,	
	2012	2011
Furniture and equipment	\$ 527,000	\$ 406,000
Less: accumulated depreciation	(391,000)	(268,000)
Total furniture and equipment, net	\$ 136,000	\$ 138,000

F-41

TABLE OF CONTENTS**AmpliPhi Biosciences Corporation****Notes to Consolidated Financial Statements
Year Ended December 31, 2011 and 2012****3. Property and Equipment (continued)**

Depreciation expense totaled \$60,000 and \$80,000 for the years ended December 31, 2012 and 2011, respectively.

During the periods ending December 31, 2012 and 2011, the Company sold or disposed of certain property and equipment no longer used as a result of the reprioritization of its business priorities. The Company recognized net losses of \$30,000 and \$10,000 on the disposal of property and equipment in the consolidated statements of operations and comprehensive loss for the years ended December 31, 2012 and 2011, respectively.

4. Income Taxes

At December 31, 2012, the Company had US and UK net operating loss carry-forwards, or NOLs, of approximately \$170.4 million and research tax credit carry-forwards of approximately \$4.3 million. The carry-forwards began to expire in 2012, and may be further subject to the application of Section 382 of the Code, as discussed further below. The Company has provided a valuation allowance to offset the deferred tax assets due to the uncertainty of realizing the benefits of the net deferred tax asset.

Significant components of our US deferred tax assets and liabilities were as follows:

	December 31,	
	2012	2011
Deferred tax assets		
Net operating loss carry-forwards	\$57,774,000	\$62,391,000
Capital loss carry-forwards		109,000
Research and orphan drug credit carry-forwards	4,297,000	4,847,000
Depreciation and amortization	2,000	53,000
Restructure and other	467,000	666,000
Gross deferred tax assets	62,540,000	68,066,000
Valuation allowance for deferred tax assets	(62,540,000)	(68,066,000)
Net deferred tax asset	\$	\$

The change in the valuation allowance was a \$5.5 million decrease in 2012 and a \$3.9 million decrease in 2011. All of the capital losses generated by the sale of CellExSys and Chromos have expired as of 2012.

The past sales and issuances of stock have likely resulted in ownership changes as defined by Section 382 of the Code.

A study has not been done at this time because the full valuation allowance eliminating potential profit and loss adjustments due to changes in the gross amount of the NOLs and credits would be offset by a change in the valuation allowance. It is possible that a future analysis may result in the conclusion that a substantial portion, or perhaps

substantially all, of the NOLs and credits will expire due to the limitations of Sections 382 and 383 of the Code. As a result, the utilization of our net operating losses and tax credits may be limited and a portion of the carry-forwards may expire unused.

The Company adopted the provisions of ASC 740, *Income Taxes*, the successor of FASB Interpretation 48, *Accounting for Uncertainty in Income Taxes*, or FIN 48, on January 1, 2007. Previously, the Company had accounted for tax contingencies in accordance with ASC 450, *Contingencies*, the successor of SFAS 5, *Accounting for Contingencies*. As required by FIN 48, the Company recognizes the financial statement benefit of a tax position only after determining that the relevant tax authority would more likely than not sustain the position following an audit. For tax positions meeting the more-likely-than-not threshold, the amount recognized in the financial statements is the largest benefit that has a greater than 50 percent likelihood of being realized upon ultimate settlement with the relevant tax authority. At the adoption date, the Company

F-42

TABLE OF CONTENTS

AmpliPhi Biosciences Corporation

Notes to Consolidated Financial Statements Year Ended December 31, 2011 and 2012

4. Income Taxes (continued)

applied FIN 48 to all tax positions for which the statute of limitations remained open. The Company does not have any material unrecognized tax benefits as of December 31, 2012.

The Company is subject to income taxes in the U.S. federal jurisdiction as well as in the United Kingdom for any activity of Biocontrol Ltd and in Australia for any activity of Special Phage Holdings Pty Ltd. Tax regulations within each jurisdiction are subject to the interpretation of the related tax laws and regulations and require significant judgment to apply. With few exceptions, the Company is no longer subject to U.S. federal tax examinations by tax authorities for the years before 2009. However, tax years from 1998 to 2008 may be subject to examination in the event that the Company utilizes the NOLs from those years in our current or future year tax returns.

The Company has a policy of recognizing interest and penalties accrued related to unrecognized tax benefits as additional tax expense for all periods presented. During the years ended December 31, 2012, 2011 and 2010 the Company did not recognize any interest and penalties. The Company has not accrued any interest and penalties at December 31, 2012 and December 31, 2011.

For the year ending December 31, 2012, the Company had a UK research and development tax refund of \$135,000 (£85,000) for the losses in the UK subsidiary and an Australian research and development tax refund of \$221,000 (USD) for the losses in the Australian subsidiary. The Company also has a 2011 UK research and development tax refund as of December 31, 2012 of \$262,000 which was received in January 2013.

5. Commitments and Contingencies

As part of the acquisition of SPH Holdings Pty Ltd (Note 9), the Company paid \$100,000 and issued an additional 2,000,000 shares of common stock to Cellabs Pty Ltd (Cellabs) as part of a repayment agreement for its outstanding loans to SPH Holdings Pty Ltd. In July 2013, the Company will pay an additional \$50,000 to Cellabs. The remaining loan balance of \$200,000 will be repaid either by 10% of any proceeds received by the Company until Cellabs has received \$200,000, or, starting in May 2014; the Company shall pay the remaining balance in monthly installments equal to the lesser of \$10,000 or the amount remaining unpaid at the time of payment.

In February 2011, the Company entered into an agreement with Virginia Biotechnology Research Partnership Authority for Richmond, Virginia laboratory space. This agreement has a contractual expiration date of February 29, 2012 at which time it converted to a rolling three-month lease. At December 31, 2012, the Company's minimum payment commitment for the Company's Richmond, Virginia laboratory space was \$4,800.

In December 2011, the Company entered into an agreement with Nevis Limited and Charter Limited for laboratory space in Bedfordshire, United Kingdom. This agreement has a minimum period of 3 years and a contractual expiration

date of December 8, 2016. At December 31, 2012, the Company's minimum payment commitment for the Company's Bedfordshire laboratory space was \$266,000.

The Company recognized rent expense under operating leases of \$146,000 in 2012 and \$148,000 in 2011.

The Company is subject to legal claims and actions related to the operations of its business. The Company does not expect the ultimate outcome of any such actions to have a material impact on its consolidated financial position or results of operations.

6. Stock Options and Warrants

On December 22, 2011, in connection with the Biocontrol business combination in Note 9, the Company issued warrants to purchase up to 1,355,164 shares of its common stock. These warrants expire in December 2016 and are exercisable at a price of \$0.46 per share.

AmpliPhi Biosciences Corporation

Notes to Consolidated Financial Statements Year Ended December 31, 2011 and 2012

6. Stock Options and Warrants (continued)

On June 27, 2007, in connection with a private placement, the Company issued additional warrants to purchase up to 7.6 million shares of its common stock. These warrants were to originally expire in June 2012 and were originally exercisable at a price of \$3.25 per share. The Company also issued a warrant to purchase 334,989 shares of its common stock, with the same terms as those issued pursuant to this private placement, as compensation to the placement agent in this transaction. In connection with the acquisition of Biocontrol Limited (see Note 9), and in return for suspension or waiver of certain provisions within the June 27, 2007 warrant agreements, the Company modified these warrant agreements in November 2010. The exercise price of the warrants was reset to \$1.50 per share and the warrants now expire in June 2013.

On January 11, 2007, in connection with a private placement, the Company issued warrants to purchase up to 763,000 shares of its common stock. These warrants expired in January 2012.

The Company follows ASC 815-40, *Contracts in an Entity's Own Equity*, as it relates to outstanding warrants. All of the Company's outstanding warrants are considered to be equity under this guidance. No warrants were exercised in 2012 or 2011.

Stock-Based Compensation

The Company's Stock Incentive Plan provides for the issuance of long-term incentive awards, or Awards, in the form of non-qualified and incentive stock options, or Options, stock appreciation rights, stock grants and restricted stock units. The Awards may be granted by the Company's Board of Directors to its employees, directors and officers and to consultants, agents, advisors and independent contractors who provide services to the Company. The exercise price for Options must not be less than the fair market value of the underlying shares on the date of grant. Options expire no later than ten years from the date of grant and generally vest and become exercisable over a four-year period following the date of grant. Restricted stock units generally vest over a three-year period following the date of grant. Every non-employee member of the Company's Board of Directors receives an annual non-qualified Option or restricted stock unit grant. Upon the exercise of Options and the vesting of restricted stock units, the Company issues the resulting shares from shares reserved for issuance under the Company's Incentive Plan.

Under ASC 718-10, *Share-Based Payment*, the Company is required to expense the fair value of share-based payments granted over the vesting period. The Company values Awards granted at their grant date fair value in accordance with the provisions of ASC 718-10 and recognizes stock-based compensation expense on a straight-line basis over the service period of each award.

Stock-based compensation expense is reduced by an estimated forfeiture rate derived from historical employee termination behavior. If the actual number of forfeitures differs from the Company's estimates, the Company may record adjustments to increase or decrease compensation expense in future periods. There were no significant

adjustments related to changes in the Company's estimates for the years ending December 31, 2012 or 2011.

Following is a summary of the amount included as stock-based compensation expense in the accompanying consolidated statements of operations:

Year ended December 31,	2012	2011
Stock options:		
Research and development expense	\$	\$
General and administrative expense	2,000	
Restricted stock units:		
Research and development expense		
General and administrative expense	7,000	85,000
Total stock-based compensation expense	\$ 9,000	\$ 85,000

F-44

TABLE OF CONTENTS**AmpliPhi Biosciences Corporation****Notes to Consolidated Financial Statements
Year Ended December 31, 2011 and 2012****6. Stock Options and Warrants (continued)**

The following table summarizes Option activity:

	Shares	Weighted Average Exercise Price	Average Remaining Contractual Term (Years)	Intrinsic Value
Outstanding at December 31, 2010	1,116,096	1.64		
Granted				
Exercised				
Forfeited	(82,032)	0.27		
Expired	(743,196)	2.21		
Outstanding at December 31, 2011	340,868	0.74		
Granted	13,581,052	0.20		
Exercised				
Forfeited				
Expired	(172,368)	0.52		
Outstanding at December 31, 2012	13,749,552	\$ 0.21	6.49	\$
Exercisable at December 31, 2012	194,552	\$ 0.87	6.49	\$

The aggregate intrinsic value is determined using the closing price of the Company's common stock of \$0.18 on December 31, 2012.

As of December 31, 2012, the Company had unrecognized compensation cost related to unvested Options of approximately \$1,679,000 net of estimated forfeitures, which the Company expects to recognize over a weighted average period of approximately four years.

The fair value of each Option is estimated on the date of the grant using the Black-Scholes-Merton option pricing model. There were 13,581,052 options granted in the year ended December 31, 2012 and no options granted in 2011.

The following are the assumptions for the periods in which there were Options granted:

Expected Dividend: The Company does not anticipate any dividends.

Expected Life: The expected life represents the period that the Company expects its stock-based Awards to be outstanding. The Company determines life based on historical experience and vesting schedules of similar awards.

Expected Volatility: The Company's expected volatility represents the weighted average historical volatility of the shares of its common stock for the most recent four-year and five-year periods.

Risk-Free Interest Rate: The Company based the risk-free interest rate used on the implied yield currently available on U.S. Treasury zero-coupon issues with an equivalent remaining term. Where the expected term of its stock-based awards does not correspond with the terms for which interest rates are quoted, the Company performs a straight-line interpolation to determine the rate from the available term maturities.

Forfeiture Rate: The Company applies an estimated forfeiture rate that is derived from historical forfeited shares. If the actual number of forfeitures differs from its estimates, the Company may record additional adjustments to compensation expense in future periods.

F-45

TABLE OF CONTENTS**AmpliPhi Biosciences Corporation****Notes to Consolidated Financial Statements
Year Ended December 31, 2011 and 2012****6. Stock Options and Warrants (continued)**

The following table summarizes activity related to the Company's restricted stock units:

	Shares	Weighted-Average Grant Date Fair Value per Share
December 31, 2010	157,669	\$ 0.44
Granted		
Vested	(97,669)	0.50
Forfeited		
December 31, 2011	60,000	\$ 0.34
Granted		
Vested	(60,000)	\$ 0.34
Forfeited		
December 31, 2012		\$

The fair value of each Award is estimated on the date of the grant using the closing market price of the Company's common stock. As of December 31, 2012, there is no unrecognized compensation cost related to unvested restricted stock units.

Reserved Shares

As of December 31, 2012, the Company had reserved shares of its common stock for future issuance as follows:

	Shares Reserved
Stock options and restricted stock units outstanding	13,749,552
Available for future grants under the Stock Incentive Plan	22,741,689
Warrants	8,389,946
Total Shares reserved	44,881,187

7. Discontinued Operations

In June 2012, the Company sold all of its assets used in its gene therapy business including process development, quality control, quality assurance, manufacturing and bioanalytical functions for \$3.0 million. In addition to this cash consideration, the Company may receive a long term royalty of 1.75% on certain product sales. This royalty may be completely canceled at any time by a one-time payment of \$1.75 million.

8. Employee Retirement Plan

The Company sponsors an employee retirement plan under Section 401(k) of the Internal Revenue Code of 1986, as amended. All of the Company's employees who meet minimum eligibility requirements are eligible to participate in the plan. Matching contributions to the 401(k) plan are made at the discretion of the Company's Board of Directors. The Company suspended matching contributions effective January 1, 2009.

9. Business Combinations

On November 9, 2012, the Company acquired Australia-based Special Phage Services (SPS). The acquisition of SPS primarily focused on IPR&D being performed on *S. aureus* infections, which is currently being developed under AmpliPhage-002: Wound and Skin Infections Caused by *S. aureus*.

In a share exchange transaction, AmpliPhi Australia Pty Limited, a wholly owned subsidiary of US-based AmpliPhi, acquired Sydney-based SPH, the holding company of SPS. Under the terms of the acquisition, the Company offered 40 million shares of its common stock in exchange for 100% of the fully diluted share

TABLE OF CONTENTS

AmpliPhi Biosciences Corporation

Notes to Consolidated Financial Statements Year Ended December 31, 2011 and 2012

9. Business Combinations (continued)

capital of SPH. 20 million shares are held in escrow, 8 million to satisfy potential warranty claims under the transaction documents and the remaining 12 million shares are held pending completion of certain milestones. At December 31, 2012, IPR&D in the amount of \$5,161,000 and goodwill in the amount of \$2,381,000 have been recorded. In management's opinion, this IPR&D and goodwill have not been impaired as of December 31, 2012. As part of this transaction, the Company acquired \$260,000 in assets to include a \$221,000 receivable for an Australian research and development tax refund, \$37,000 in equipment, and \$2,000 in cash. The Company also assumed liabilities of \$613,000.

On January 6, 2011, the Company acquired Biocontrol, a clinical development stage biotechnology company in the United Kingdom (the Acquisition). The acquisition of Biocontrol included an IPR&D project related to AmpliPhage-001: Lung Infections in Cystic Fibrosis (CF) Patients Caused by *P. aeruginosa*.

The Company acquired 100% of the voting stock of Biocontrol and issued 22,817,198 shares of its common stock to the Biocontrol shareholders with a total fair value of approximately \$8.6 million as of January 6, 2011. The Acquisition was made through an acquisition subsidiary, which has continued post-Acquisition as Biocontrol. At December 31, 2011, IPR&D in the amount of \$7,285,000, goodwill in the amount of \$1,948,000, and patents in the amount of \$493,000 have been recorded. In management's opinion, this IPR&D and goodwill have not been impaired as of December 31, 2012 and December 31, 2011. The patents are being amortized over their useful life through December 2026.

10. Convertible Loan Notes

During 2012 and 2011, the Company issued \$950,000 and \$2,492,000 in convertible loan notes respectively. The Company is required to pay the holders of the notes the outstanding principal amount and all accrued interest by June 18, 2013. Interest on the unpaid principal balance of these notes accrues at the rate of ten percent (10%) per annum. As of December 31, 2012, \$465,000 of interest expense was accrued. \$126,000 of interest expense was accrued through December 31, 2011.

In the event the Company shall raise a minimum of \$3,000,000 in gross proceeds, in connection with an offering of debt or equity securities of the Company at any time following the issuance of these notes and prior to the maturity date of June 18, 2013 or the payment in full of the principal balance and all accrued interest due under these notes, the Company may, at its option, elect to convert the principal balance and unpaid accrued interest into securities of the Company. If the Company completed the subsequent funding event and determined to exercise the conversion option, the Company shall notify the note holders that it has determined to exercise the conversion option and the holders shall elect to convert the unpaid principal balance and unpaid accrued interest into either of the following: (1) the number and type of securities issued in the subsequent funding event at a conversion rate that shall be equal to a ten

percent (10%) discount on the effective price per share or per unit, as applicable, of the subsequent funding event securities; or (2) the number of shares of common stock of the Company equal to the conversion amount divided by \$0.20.

11. Related Parties

During 2012, \$30,000 was recognized in General and Administrative expenses for management and accounting consultancy fees provided by two shareholders. The Company shares resources in the new Australian operations such as facility space, electricity, insurance, equipment and staffing with Cellabs, owned by a shareholder, and receives a quarterly invoice for these services. The total expense for these services for the period November 8 through December 31, 2012 was \$6,000. As part of the acquisition of SPH (Note 9), the Company also entered into a loan repayment agreement with Cellabs (Note 5). As of December 31, 2012, \$562,000 of current liabilities are due to related parties.

F-47

TABLE OF CONTENTS

AmpliPhi Biosciences Corporation

Notes to Consolidated Financial Statements Year Ended December 31, 2011 and 2012

12. Correction of Errors

The Company's previously issued financial statements have been restated to reclassify the revenue from the sale of assets that was previously reported as part of revenue to a gain on sale of assets from discontinued operations. As a result of this correction, revenue for 2012 was reduced \$3,150,000 and a gain on sale of assets from discontinued operations was recorded for \$3,150,000. The net loss per share remained the same, but additional disclosures were added to the Consolidated Statements of Operations and Comprehensive Loss for net loss per share from continuing operations and gain from discontinued operations per share.

The Company also contracted a valuation team to review the purchase price allocation of Biocontrol and Special Phage Services. As a result, overall goodwill was restated and a new intangible asset, in process research and development (IPR&D), was recognized. For the Biocontrol acquisition, \$7,285,000 of goodwill was reclassified to IPR&D and \$493,000 to patents. For the Special Phage Services, \$5,161,000 of goodwill was reclassified to IPR&D. The overall purchase price of Special Phage Services was reduced by \$299,000 due to a decrease in the valuation of contingent shares reserved for the milestone agreement. This further reduced goodwill by \$299,000 and paid-in-capital contingent shares by \$299,000.

The Company also contracted a valuation team to review the purchase price allocation of Biocontrol. As a result, in process research and development (IPR&D) was restated and a new intangible asset, patents, was recognized. For the Biocontrol acquisition, \$493,000 of IPR&D was reclassified to patents. In addition, amortization expense for patents of \$31,000 was recognized in both 2012 and 2011.

13. Subsequent Events

On February 1, 2013, the Company's Board of Directors approved the issuance of new convertible promissory notes in an aggregate principal amount not to exceed \$7,500,000, together with warrants to purchase shares of common stock of the Company. Interest on the unpaid principal balance of these notes shall accrue from the investment date at the rate of ten percent (10%) per annum. The warrants have the right to purchase the number of shares of the Company's common stock equal to twenty-five percent (25%) of the principal amount of such holder's note divided by \$0.14 (subject to adjustment to reflect forward or reverse stock splits, stock dividends, recapitalizations and the like).

In the event the Company shall raise a minimum of \$3,000,000 in gross proceeds, in connection with an offering of debt or equity securities of the Company at any time following the issuance of these new notes and prior to the maturity date of one year from issuance or the payment in full of the principal balance and all accrued interest due under these notes, the Company may, at its option, elect to convert the principal balance and unpaid accrued interest into securities of the Company. If the Company completed the subsequent funding event and determined to exercise the conversion option, the Company shall notify the note holders that it has determined to exercise the conversion option and the holders shall elect to convert the unpaid principal balance and unpaid accrued interest into either of the

following: (1) the number and type of securities issued in the subsequent funding event at a conversion rate that shall be equal to a ten percent (10%) discount on the effective price per share or per unit, as applicable, of the subsequent funding event securities; or (2) the number of shares of common stock of the Company equal to the conversion amount divided by \$0.14.

Through March 29, the Company issued \$1,000,000 in new convertible loan notes and converted \$1,900,000 of previous convertible loan notes and accrued interest into the new security. As part of these transactions, warrants for 5,244,673 shares were also issued.

On March 29, 2013, the Company entered into an Exclusive Channel Collaboration Agreement with Intrexon Corporation. This agreement allows the Company to utilize Intrexon's synthetic biology platform for the identification, development, and production of bacteriophage-containing human therapeutics. The Company paid a one-time technology access fee to Intrexon of \$3,000,000 in common stock. The Company shall pay Intrexon, in cash or stock, milestone fees for the initiation of a Phase 2 trial of \$2,500,000 upon commencement of the first Phase 2 trial and \$5,000,000 upon the first regulatory approval of any product in any major market country. With regard to each product sold by the Company, the Company will pay, in cash, royalties of 6-10% based on net sales to Intrexon.

F-48

TABLE OF CONTENTS

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and
Stockholders of AmpliPhi Biosciences Corporation

We have audited the accompanying balance sheet of Special Phage Holdings Pty Ltd (Company) as of June 30, 2012, and the related statements of operations and comprehensive loss, stockholders' equity (deficit), and cash flows for the year then ended. Special Phage Holdings Pty Ltd's management is responsible for these financial statements. Our responsibility is to express an opinion on these financial statements based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. The company is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. Our audit included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the company's internal control over financial reporting. Accordingly, we express no such opinion. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audit provides a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of Special Phage Holdings Pty Ltd as of June 30, 2012, and the results of its operations and its cash flows for the year then ended in conformity with accounting principles generally accepted in the United States of America.

The accompanying financial statements have been prepared assuming that the Company will continue as a going concern. As discussed in Note 2 to the financial statements, the Company has had recurring losses from operations and has an accumulated deficit that raise substantial doubt about its ability to continue as a going concern. Management's plans in regard to those matters are also described in Note 2. The financial statements do not include any adjustments that might result from the outcome of this uncertainty.

TABLE OF CONTENTS

Special Phage Holdings Pty Ltd

Notes to Financial Statements

1. Nature of Business and Significant Accounting Policies

Nature of Business

Special Phage Holdings Pty Ltd (the Company) was incorporated in New South Wales, Australia in 2004. The Company is dedicated to developing novel antibacterial solutions called bacteriophage (phage). Phage are naturally occurring viruses that preferentially target and kill their bacterial targets. This novel approach to antimicrobial therapy positions the Company as one of the leaders in phage therapy.

Use of Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements, and the reported amounts of revenue and expenses during the reporting period. Actual results could differ from those estimates.

Cash and Cash Equivalents

The Company considers cash equivalents to be short-term investments that have a maturity at the time of purchase of three months or less, are readily convertible into cash and have an insignificant level of valuation risk attributable to potential changes in interest rates. Cash equivalents are recorded at cost, which approximates fair market value, and consist primarily of money market accounts.

Accounts Receivable

Accounts receivable amounts are stated at their face amounts less any allowance. Provisions for doubtful accounts are estimated based on assessment of the probable collection from specific customer accounts and other known factors. If an account was determined to be uncollectible (payment has not been made in accordance with contract terms), it would be written off against the allowance. As of June 30, 2012, management determined no allowance for doubtful accounts was required.

Property and Equipment

Property and equipment are recorded at cost and are depreciated using the straight-line method over the estimated useful lives of the related assets, generally three to seven years.

Revenue Recognition

The Company recognizes revenue under research and development contracts as the related costs are incurred.

Concentration of Risk

The Company's primary source of funding to continue operations is from one related party, Cellabs. As of June 30, 2012, 91% of the balance in related parties payables is due to Cellabs.

Research and Development Costs

Research and development costs include salaries, costs of outside collaborators and outside services, and supplies. The Company expenses research and development costs as incurred.

Fair Value of Financial Instruments

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. To increase the compatibility of fair value measures, the following hierarchy prioritizes the inputs to valuation methodologies used to measure fair value:

Level 1 inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities.

F-54

TABLE OF CONTENTS

Special Phage Holdings Pty Ltd

Notes to Financial Statements

1. Nature of Business and Significant Accounting Policies (continued)

Level 2 inputs are quoted prices for similar assets and liabilities in active markets or inputs that are observable for the asset or liability, either directly or indirectly through market corroboration, for substantially the full term of the financial instrument.

Level 3 inputs are unobservable inputs based on the Company's own assumptions used to measure assets and liabilities at fair value

A financial asset or liability's classification within the hierarchy is determined based on the lowest level input that is significant to the fair value measurement.

All of the Company's cash equivalents are invested in money market accounts that are based on quoted prices in active markets for identical assets and are included within Level 1 of the fair value hierarchy.

The Company believes that the carrying amounts of financial instruments such as cash and cash equivalents, accounts receivable and accounts payable approximate fair value because of the short-term nature of these items.

2. Liquidity

The Company has prepared the accompanying financial statements on a going concern basis, which assumes that the Company will realize its assets and satisfy its liabilities in the normal course of business. However, the Company has incurred net losses since its inception, has negative operating cash flows and has an accumulated deficit of \$2.19 million as of June 30, 2012. These circumstances raise substantial doubt about the Company's ability to continue as a going concern. The Company's cash balance as of June 30, 2012 was \$38,962, the accounts receivable balance was \$216,615 and the current liabilities were \$1,006,592. The accompanying financial statements do not include any adjustments to reflect the possible future effects on the recoverability and classification of assets or the amounts and classifications of liabilities that may result from the outcome of the uncertainty concerning the Company's ability to continue as a going concern.

The Company believes that its current resources, in addition to the acquisition of the Company by AmpliPhi Biosciences detailed in the Subsequent Events disclosure (Note 10), will be sufficient to fund operations into the first quarter of 2015. This estimate is based on the Company's ability to manage its staffing expenses and its working capital and actual results could differ from its estimates. The Company will be seeking additional financing in order to fund operations through 2015; however, the Company cannot provide assurances that it will be successful in obtaining additional financing for these periods or as needed in the future. If the Company does not raise additional funds by the first quarter of 2015, it plans to implement cost reduction measures, such as a reduction in workforce, reducing its intellectual property prosecution, reducing other operating activities, and/or the pursuit of alternative financing transactions that would likely be on terms disadvantageous to the Company and dilutive to its shareholders. The

Company could also be required to relinquish rights to its technology or product candidates or in-licensed technology on unfavorable terms, either of which would reduce the ultimate value of the technology or product candidates, or to sell assets likely at values significantly below their potential worth. If the Company is unable to secure additional capital, it may be required to cease operations, declare bankruptcy or otherwise wind up its business.

3. Property and Equipment

Property and equipment consist of the following:

	June 30,
	2012
Furniture and equipment	\$ 189,452
Less: accumulated depreciation	(153,824)
Total furniture and equipment, net	\$ 35,628

Depreciation expense totaled \$4,777 for the year ended June 30, 2012.

F-55

TABLE OF CONTENTS

Special Phage Holdings Pty Ltd

Notes to Financial Statements

4. Income Taxes

As of June 30, 2012, the Company had an Australian research and development tax refund of \$216,615.

5. Commitments and Contingencies

The Company has an informal month to month lease with Cellabs, a related party. The Company recognized rent expense under this informal operating lease of \$37,280 in 2012.

The Company is subject to legal claims and actions related to the operations of its business. The Company does not expect the ultimate outcome of any such actions to have a material impact on its financial position or results of operations.

6. Other Comprehensive Loss

Comprehensive loss is the total of net loss and all other non-owner changes in equity. For the year ended June 30, 2012, the Company's net loss was \$409,497 and other comprehensive loss was \$5,082.

7. Stock Options

As part of the 2005 Subscription Agreement, the Company issued one option for every share purchased by the investor in 2005 totaling 3,125,000 options granted at \$.20 each. Under the terms of the agreement, the investor must give the Company written notice of the exercise together with payment for the options. All options held by an investor must be exercised at the same time and one occasion. During 2012, 8 shareholders exercised 925,000 options. As of June 30, 2012, 2,200,000 options remain outstanding. These options expired on the acquisition of the Company by AmpliPhi Biosciences described in the Subsequent Events disclosure (Note 10).

8. Superannuation

The Company contributed, as required by the Superannuation Guarantee (Administration) Act 1992, 9% of employees salaries and wages into a superannuation fund. For the year ended June 30, 2012, the Company's contributions to superannuation totaled \$17,465.

9. Related Parties

During 2012, \$180,929 was recognized in operating expenses for research consulting, management consulting, accounting, and housekeeping provided by 8 shareholders. The following is a schedule of the expenses:

Related Party	Total Expense	Description of Service
Cellabs Pty Ltd	\$ 41,341	Management Consulting
A.P.G. Nominees Pty Ltd	41,291	Management Consulting
HGM Biopharma	28,154	Management Consulting
Dr. Bernie Hudson	28,153	Management Consulting

Doug Crease	10,666	Accounting
Dr. Bernie Hudson	5,080	Management Consulting
Colleen Black	1,752	Housekeeping
	\$ 884,406	

10. Subsequent Events

The Company has evaluated subsequent events through February 3, 2014, the date on which the financial statements were available to be issued.

In November 2012, the Company was acquired by AmpliPhi Biosciences (AmpliPhi) in a share exchange transaction. The combination of the two companies results in the creation of a leading anti-infective company focused on developing phage-based therapies to combat the growing threat of antibiotic-resistant infection. Under the terms of the acquisition, AmpliPhi offered 40 million shares of its common stock in exchange for 100% of the fully diluted share capital of the Company. 20 million shares will be held in escrow, 8 million to satisfy potential warranty claims under the transaction documents and the remaining 12 million shares to be held pending completion of certain milestones.

As part of the acquisition, existing loan balances for services provided by Cellabs Pty Ltd, a related party (see Note 9), were capped at \$782,000. The Cellabs Pty Ltd balances for services were adjusted to this cap for these financial statements as of June 30, 2012. In addition to these services, lab equipment and supplies totaling \$33,768 which were purchased by Cellabs Pty Ltd and transferred to the Company as part of the acquisition were recognized as an additional related party liability.

In November 2013, 8 million of the escrow shares were released. The remaining 12 million shares continue to be in escrow until November 2014 or completion of the milestones. As of February 3, 2014 the agreed upon milestones have not been achieved.
