relating to the

offering to which this presentation relates, well as in other filings we make with the Securities and Exchange Commission. Reacutioned not to place undue reliance on these forward-looking statements, which speak only as of the date that they are made. undertake no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, for otherwise.

2 2 Overview

Environmental Power Corporation (EPC) owns and operates proven commercial scale renewable energy facilities producing a versatile methane-rich biogas from waste products consisting of agricultural livestock and other organic wastes.

EPC has a proven track record and is a leader in the biogas based renewable energy market and evolving carbon credit market.

Market Drivers

First Mover Status

First Mover Status
Unique Offering
Projects Ready to Go

Unique opportunity to provide project dedicated funds at a market coupon rate and participate in equity upside.

High and volatile energy prices, growing renewable energy demand (RPS), increasing environmental concerns (carbon emissions) and increasing regulation of agricultural waste have led to increased interest in EPC s renewable product. Environmental Power Corporation Agenda

3Environmental Power CorporationProcess Overview

4
Environmental Power Corporation
Advantages of Biogas
4
Versatility
Income
Alternative
Security of
Supply

Biogas can be used to displace an array of conventional fuels.

Infrastructure already exists vs. other renewables

Provides income diversification and cost savings for farmers

Reduces dependence on fossil fuels and is a domestic supply of energy

Produces energy when needed, rather than when available unlike wind & solar which are intermittent High Economic Efficiency

Does not require government subsidies

Production efficiency is significantly higher than other biofuels

Addresses farms nutrient management concerns.

Biogas process sequesters methane; 21 times the effect of carbon dioxide as a greenhouse gas

Waste products (manure and other organic wastes) are the feedstock; not dependent on food crops

Non-depleting asset utilizing waste streams
Good for
Environment
Waste to
Energy
Renewable
Output

available 24/7

5 5

Environmental Power Corporation Confluence of Agriculture and Energy

Agriculture

Outsourcing of manure management issues

Alignment of Long-Term Interest

Reduced farm operating/capital costs

Lease payment for the site of facilities

Project profit sharing with local farmers

By-products can be used as bedding for animals and liquid fertilizer add value to farm; potential third party sales

Energy

Useful renewable energy product (Renewable Portfolio Standards, state mandates, Renewable Energy Credits, etc.)

Most projects expected to qualify for salable carbon credits Solutions that are clean, proven, cost-effective and operate at the confluence of the agricultural and energy markets:

Environment

Ag

Energy

EPC produces pipeline-quality natural gas . . . with renewable attributes

EPG is essentially a renewable exploration and production natural-gas company with some key differences:

No exploration risk

-

No drilling risk

-

No dry holes

-

Non depleting resource Also an active participant in the evolving carbon credit market Environmental Power Corporation EPC as a Renewable E&P Play

15
Environmental Power Corporation
Debt Convertible into Common Equity
15
Fixed Rate
Liquid
Security
Senior to All
Equity

Dedicated Project Funding

Fixed rate debt fully registered with the SEC and unrestricted from trading

Debt has seniority in the holding company capital structure, ahead of the existing convertible preferred stock and common stock

With \$130 million in project financing already raised, money raised in this offering will go directly to facility construction/operations

Contractors pre-qualified, permits obtained and site arrangements secured for the next seven projects Convertible Equity at 2008 Price

Debt convertible into common equity at a minimum conversion price achieved in summer 2008

When construction of the seven permitted facilities is complete (anticipated to be in 2010), EPC annual revenues expected to be greater than \$40 million

Likely transition to mandatory market could significantly increase EPC revenue opportunity

US dairy, cattle and hog farms can take advantage of this cost-effective environmental waste management solution Transition to Operating Company Carbon

Unique offering; projects ready to go

that:

Have debt financing and permits in place

Have secure and stable revenue streams as gas offtake

agreements are in place which reflect premium green attributes of our natural gas

Have multiple revenue streams renewable natural gas, carbon credits, other by-products

Do not rely on subsidies, although we will seek parity with other renewables

Unique company:

EPC holds market leadership position with first mover status in the renewable biogas energy sector

Strong growing market for cost effective renewable and domestic energy sources

Large untapped market with announced projects and robust development pipeline

5 million MMBtu/yr with an additional 10.7 million MMBtu/yr in development

Target project long term stable cash flow streams resulting in attractive returns

EPC can be viewed as an E&P company without exploration risks or depletion curve

Innovative, proven and scalable technology

Valuable strategic relationships

Management team with deep industry experience to execute the plan

Unique opportunity to participate in the renewable energy sector
