- Notes:
1. Net Unrealized Gains include ¥14,846 million, which was recognized in the consolidated statement of income by applying the fair-value hedge method and others.
 2. Fair value of Japanese stocks is determined based on the average quoted market price over the month preceding the consolidated balance sheet date. Fair value of securities other than Japanese stocks is determined at the quoted market price if available, or other reasonable value at the consolidated balance sheet date.
 3. Certain Other Securities which have readily determinable fair value are devalued to the fair value, and the difference between the acquisition cost and the fair value is treated as the loss for the third quarter (accumulated period) (impairment (devaluation)), if the fair value (primarily the closing market price at the consolidated balance sheet date) has significantly deteriorated compared with the acquisition cost (including amortized cost), and unless it is deemed that there is a possibility of a recovery in the fair value. The amount of impairment (devaluation) for the third quarter (accumulated period) was ¥34,163 million.

The criteria for determining whether a security's fair value has significantly deteriorated are outlined as follows:

Securities whose fair value is 50% or less of the acquisition cost

Securities whose fair value exceeds 50% but is 70% or less of the acquisition cost and the quoted market price maintains a certain level or lower.

(Additional Information)

1. Floating-rate Japanese Government Bonds

For Floating-rate Japanese Government Bonds within Securities, based on our determination that current market prices may not reflect fair value due to the extremely limited volume of actual transactions, our domestic consolidated banking subsidiaries and a domestic consolidated trust banking subsidiary have applied reasonably calculated prices as book value for the third quarter.

In deriving the reasonably calculated price, we used the Discounted Cash Flow Method as well as other methods. The price decision variables include the yield of 10-year Japanese Government Bonds and the volatilities of interest rate swap options for 10-year Japanese Government Bonds as underlying assets.

2. Securitization Products

With respect to the credit investments in securitization products made as an alternative to loans by the European and North American offices of our domestic consolidated banking subsidiaries, given the current situation in which the volume of actual transactions is extremely limited and there exists a considerable gap between the offers and bids of sellers and buyers, we determined that valuations obtained from brokers and information vendors cannot be deemed to be the fair value, and we applied reasonably calculated prices based on the reasonable estimates of our management as fair value.

In deriving reasonably calculated prices based on the reasonable estimates of our management mentioned above, we used the Discounted Cash Flow Method. The price decision variables include default rates, recovery rates, pre-payment rates and discount rates, and the subject Securities included Residential Mortgage-Backed Securities, Collateralized Loan Obligations, Commercial Mortgage-Backed Securities and other Asset Backed Securities.
