## Certain defined terms

Unless the context requires otherwise, 'HSBC Holdings' means HSBC Holdings plc and 'HSBC', the 'Group', 'we', 'us' and 'our' refer to HSBC Holdings together with its subsidiaries. Within this document the Hong Kong Special Administrative Region of the People's Republic of China is referred to as 'Hong Kong'. When used in the terms 'shareholders' equity' and 'total shareholders' equity', 'shareholders' means holders of HSBC Holdings ordinary shares and those preference shares and capital securities issued by HSBC Holdings classified as equity. The abbreviations '\$m' and '\$bn' and '\$tn' represent millions, billions (thousands of millions) and trillions of US dollars, respectively.

### Regulatory framework for disclosures

HSBC is supervised on a consolidated basis in the United Kingdom ('UK') by the Prudential Regulation Authority ('PRA'), which receives information on the capital adequacy of, and sets capital requirements for, the Group as a whole. Individual banking subsidiaries are directly regulated by their local banking supervisors, who set and monitor their local capital adequacy requirements. In most jurisdictions, non-banking financial subsidiaries are also subject to the supervision and capital requirements of local regulatory authorities.

At a consolidated Group level, we calculate capital for prudential regulatory reporting purposes using the Basel III framework of the Basel Committee on Banking Supervision ('the Basel Committee') as implemented by the European Union ('EU') in the amended Capital Requirements Directive and Regulation ('CRD IV'), and in the PRA Rulebook for the UK banking industry. The regulators of Group banking entities outside the EU are at varying stages of implementation of the Basel III framework, so local regulation in 2017 may have been on the basis of the Basel I, II or III frameworks.

The Basel III framework is structured around three 'pillars': the Pillar 1 minimum capital requirements and Pillar 2 supervisory review process are complemented by Pillar 3 which concerns market discipline. The aim of Pillar 3 is to produce disclosures that allow market participants to assess the scope of application by banks of the Basel Committee's framework and the rules in their jurisdiction, their capital condition, risk exposures and risk management processes, and hence their capital adequacy.

The PRA's final rules adopted national discretions in order to accelerate significantly the transition timetable to full 'end point' CRD IV compliance.

#### Pillar 3 disclosures

Our Pillar 3 disclosures at 30 June 2017 comprise all information required under Pillar 3, both quantitative and qualitative. They are made in accordance with Part 8 of the Capital Requirements Regulation within CRD IV and as recommended by the European Banking Authority ('EBA') guidelines on disclosure requirements issued in December 2016. Additionally, we continue to present a number of Basel Committee's templates where these do not overlap with the EBA guidelines. These disclosures are supplemented by specific additional requirements of the PRA and discretionary disclosures on our part.

The Pillar 3 disclosures are governed by the Group's disclosure policy framework as approved by the Group Audit Committee ('GAC'). Pillar 3 requires all material risks to be disclosed, enabling a comprehensive view of a bank's risk profile.

Where disclosures have been enhanced, or are new, we do not generally restate or provide prior-year comparatives.

The capital resources tables track the position from a CRD IV transitional to an end-point basis. Furthermore, specific rows and columns in the tables which are not considered to be relevant to HSBC's activities have been omitted.

Pillar 3 requirements may be met by inclusion in other disclosure media. Where we adopt this approach, references are provided to the relevant pages of the Interim Report 2017 or to other locations.

We continue to engage constructively with the UK authorities and industry associations to improve the transparency and comparability of UK banks' Pillar 3 disclosures.

### Regulatory developments

#### Basel Committee

During the first half of 2017, the Basel Committee proposed further revisions to the regulatory capital framework. In particular, it published:

- a second consultation regarding the identification and management of step-in risk;
- the interim regulatory treatment and transitional requirements for International Financial Reporting Standard 9, Financial Instruments ('IFRS 9') provisions;
- the final Phase 2 Pillar 3 standards;
- and

• a consultation to revise the global systemically important banks ('G-SIB') assessment framework.

In addition, the Basel Committee confirmed that it has largely completed the technical work needed to revise the Basel III regulatory capital framework, including the approaches to credit risk, operational risk and the leverage ratio. The

only outstanding area is the proposal to implement a capital floor for modelled risk-weighted assets ('RWAs'), where the final calibration and associated transitional provisions are expected. In all instances, the final standards will have to be transposed into the relevant local law before coming into effect.

#### Financial Stability Board

In July 2017, the Financial Stability Board ('FSB') expanded its resolution reform policy framework with the publication of its 'Guiding Principles on the Internal Total Loss-absorbing Capacity of G-SIBs ('Internal TLAC')'. These guidelines supplement the FSB's TLAC standard published in November 2015. Again, this needs to be incorporated into the relevant local law before coming into effect.

#### European Union

In the EU, elements of the Basel Committee's and FSB's reforms are being implemented through revisions to the CRD IV and the EU resolution framework. The key components include changes to the market risk and counterparty credit risk frameworks, a binding leverage ratio and the regulatory recognition of IFRS 9. It also includes details of the minimum requirements for TLAC, which in the EU is known as the 'Minimum Requirements for own funds and Eligible Liabilities' ('MREL'). These changes are expected to be finalised by 2019 and apply from 1 January 2021, with the exception of the rules on MREL and the transitional capital provisions for IFRS 9, which are expected to apply from 1 January 2019 and 1 January 2018, respectively.

In June, the EU reached agreement on the new securitisation capital rules. This is expected to be implemented on 1 January 2019 for new transactions and on 1 January 2020 for existing positions.

#### Bank of England

In the UK, the Bank of England ('BoE') published its policy on setting MREL in November 2016. Elements of this policy remain outstanding, including the application of MREL within groups and the treatment of holdings of TLAC instruments. Meanwhile, in March 2017, HSBC received from the BoE its indicative MREL requirement applicable to HSBC Holdings plc and its European Resolution Group (comprised of HSBC Bank plc and its subsidiaries). This includes interim MREL requirements effective from 1 January 2019 and final requirements effective from 1 January 2022. The BoE also formally confirmed 'multiple-point-of-entry' as the preferred resolution strategy for HSBC. In May, the BoE published the quantum of MREL requirements for major UK banks.

HSBC Holdings plc 3

---

Pillar 3 Disclosures at 30 June 2017

In June 2017, the Financial Policy Committee ('FPC') raised the countercyclical buffer rate for UK exposures to 0.5%, to apply from 27 June 2018. It will consider in November whether a further increase to 1% should take effect from November 2018.

In June 2017, the BoE also consulted on the UK leverage ratio framework, proposing to exclude claims on central banks from the leverage exposure measure and, as a result, recalibrating the minimum leverage ratio for HSBC from 3% to 3.25% of tier 1 capital, to take effect during 2017.

Structure of the regulatory group

Subsidiaries engaged in insurance activities are excluded from the regulatory consolidation by excluding assets, liabilities and post-acquisition reserves, leaving the Group's investment

in these insurance subsidiaries to be recorded at cost and deducted from common equity tier 1 ('CET1') capital (subject to thresholds).

The regulatory consolidation also excludes special purpose entities ('SPEs') where significant risk has been transferred to third parties. Exposures to these SPEs are risk-weighted as securitisation positions for regulatory purposes.

Participating interests in banking associates are proportionally consolidated for regulatory purposes by including our share of assets, liabilities, profit and loss, and risk-weighted assets ('RWAs') in accordance with the PRA's application of EU legislation. Non-participating significant investments along with non-financial associates are deducted from capital (subject to thresholds).

## Leverage ratio

Our leverage ratio calculated in accordance with CRD IV was 5.7% at 30 June 2017, up from 5.4% at 31 December 2016. This was mainly due to increased capital.

In 2016, following recommendations from the Bank of England's Financial Policy Committee ('FPC'), a modification to exclude qualifying central bank balances from the leverage exposure measure was made.

In June 2017, the FPC recommended that the PRA increase the minimum requirement of the UK leverage ratio from 3% to 3.25%. This is intended to compensate for the reduction in the capital requirement resulting from the modification to the UK leverage exposure measure. This increase is expected to come into effect before the end of the year.

At 30 June 2017, our UK minimum leverage ratio requirement of 3% was supplemented by an additional leverage ratio buffer of 0.4% and a countercyclical leverage ratio buffer of 0.1%.

These additional buffers translate into capital values of \$10.4bn and \$3.2bn respectively. We comfortably exceeded these leverage requirements.

The risk of excessive leverage is managed as part of HSBC's global risk appetite framework and monitored using a leverage ratio metric within our risk appetite statement ('RAS'). The RAS articulates the aggregate level and types of risk that HSBC is willing to accept in its business activities in order to achieve its strategic business objectives. The RAS measures are monitored via the risk appetite profile report, which includes comparisons of actual performance against the risk appetite and tolerance thresholds assigned to each metric, to ensure that any excessive risk is highlighted, assessed and mitigated appropriately. The risk appetite profile report is presented monthly to the Risk Management Meeting of the Group Management Board ('RMM') and the Group Risk Committee ('GRC').

Capital buffers

The geographical breakdown and institution specific countercyclical capital buffer disclosure is published annually on the HSBC website, www.hsbc.com. Our G-SIB Indicators Disclosure is published annually on the HSBC website, www.hsbc.com.

Pillar 1 minimum capital requirements and RWA flow

Pillar 1 covers the minimum capital resource requirements for credit risk, counterparty credit risk ('CCR'), equity, securitisation, market risk and operational risk. These requirements are expressed in terms of RWAs.

Risk category	Scope of permissible approaches	Approach adopted by HSBC
Credit risk	<p>The Basel Committee's framework applies three approaches of increasing sophistication to the calculation of Pillar 1 credit risk capital requirements. The most basic level, the standardised approach, requires banks to use external credit ratings to determine the risk weightings applied to rated counterparties. Other counterparties are grouped into broad categories and standardised risk weightings are applied to these categories. The next level, the foundation IRB ('FIRB') approach, allows banks to calculate their credit risk capital requirements on the basis of their internal assessment of a counterparty's probability of default ('PD'), but subjects their quantified estimates of EAD and loss given default ('LGD') to standard supervisory parameters. Finally, the advanced IRB ('AIRB') approach allows banks to use their own internal assessment in both determining PD and quantifying EAD and LGD.</p>	<p>For consolidated Group reporting, we have adopted the advanced IRB approach for the majority of our business. Some portfolios remain on the standardised or foundation IRB approaches:</p> <ul style="list-style-type: none"> <li>• pending the issuance of local regulations or model approval;</li> <li>• following supervisory prescription of a non-advanced approach; or</li> <li>• under exemptions from IRB treatment.</li> </ul>
Counterparty credit risk	<p>Four approaches to calculating CCR and determining exposure values are defined by the Basel Committee: mark-to-market, original exposure, standardised and Internal Model Method ('IMM'). These exposure values are used to determine capital requirements under</p>	<p>We use the mark-to-market and IMM</p>

one of the credit risk approaches: standardised, foundation IRB or advanced IRB.

approaches for CCR. Details of the IMM permission we have received from the PRA can be found in the Financial Services Register on the PRA website. Our aim is to increase the proportion of positions on IMM over time.

For Group reporting purposes, all non-trading book equity exposures are treated under the standardised approach.

Equity

For the non-trading book, equity exposures can be assessed under standardised or IRB approaches.

Securitisation

Basel specifies two approaches for calculating credit risk requirements for securitisation positions in non-trading books: the standardised approach and the IRB approach, which incorporates the Ratings Based Method ('RBM'), the Internal Assessment Approach ('IAA') and the Supervisory Formula Method ('SFM'). Securitisation positions in the trading book are treated within the market risk framework, using the CRD IV standard rules.

For the majority of the non-trading book securitisation positions we use the IRB approach, and within this principally the RBM, with lesser amounts on the IAA and the SFM. We also use the standardised approach for an immaterial amount of

		non-trading book positions. We follow the CRD IV standard rules for the securitisation positions in the trading book.
Market risk	Market risk capital requirements can be determined under either the standard rules or the Internal Models Approach ('IMA'). The latter involves the use of internal value at risk ('VaR') models to measure market risks and determine the appropriate capital requirement. In addition to the VaR models, other internal models include Stressed VaR ('SVaR'), Incremental Risk Charge ('IRC') and Comprehensive Risk Measure.	The market risk capital requirement is measured using internal market risk models, where approved by the PRA, or under the standard rules. Our internal market risk models comprise VaR, stressed VaR and IRC. Non-proprietary details of the scope of our IMA permission are available in the Financial Services Register on the PRA website. We are in compliance with the requirements set out in Articles 104 and 105 of the Capital Requirements

Operational risk	The Basel Committee allows firms to calculate their operational risk capital requirement under the basic indicator approach, the standardised approach or the advanced measurement approach.	Regulation. We currently use the standardised approach in determining our operational risk capital requirement. We have in place an operational risk model that is used for economic capital calculation purposes.

23 Operational risk	98.0	98.0	7.9
25– standardised approach	98.0	98.0	7.9
27 Amounts below the thresholds for deduction (subject to 250% risk weight)	48.1	45.5	3.8
29 Total	876.1	857.9	70.1

<sup>1</sup> ‘Capital requirements’ here and in all tables where the term is used, represents the Pillar 1 capital charge at 8% of RWAs.

## Credit Risk, including amounts below the thresholds for deduction

RWAs increased by \$11.8bn in the second quarter of the year, including an increase of \$10.6bn due to foreign currency translation differences. The increase of \$1.2bn (excluding foreign exchange translation) was mainly due to an increase in asset size of \$10.5bn driven by corporate lending growth in Asia and Europe, partly offset by reductions due to management initiatives to reduce RWAs.

## Counterparty credit risk

The \$0.3bn increase in RWAs is primarily due to an increase in asset size of \$1.7bn, partly offset by RWA initiatives of \$1.6bn.

## Securitisation in non-trading book

The \$1.4bn RWA increase in the second quarter of the year, arises predominantly from new securitisation positions.

## Market risk

RWAs increased by \$4.7bn, driven by a \$5.4bn increase in risk levels, partly offset by RWA initiatives of \$0.7bn.

Table 7: RWA flow statements of credit risk exposures under the IRB approach<sup>1, 2</sup>

Edgar Filing: HSBC HOLDINGS PLC - Form 6-K

	Three months to			
	30 Jun	31 Mar	30 Jun	
	2017	2017	2017	
	RWAs	RWAs	Capital requirements

7 Foreign exchange movements	8.1	4.3	0.6	
9 RWAs at the end of the period	471.7	470.3	37.8	

1 This table includes RWA initiatives of \$12.1bn allocated across the RWA flow layers to which they relate.

2 Securitisation positions are not included in this table.

12 HSBC Holdings plc

---

RWAs under the IRB approach increased by \$1.4bn in the second quarter of the year, including an increase of \$8.1bn due to foreign currency translation differences.

The \$6.7bn decrease in RWAs excluding foreign currency translation includes the following movements:

- \$4.1bn as a result of improvements in asset quality and lending growth in lower risk portfolios.
- \$2.5bn in methodology and policy movements mainly as a result of management initiatives.

Table 8: RWA flow statements of CCR exposures under the IMM<sup>1</sup>

	Three months to		
	30 Jun 2017	31 Mar 2017	30 Jun 2017
	RWAs	RWAs	Capital requirements
	\$bn	\$bn	\$bn
1 RWAs at the beginning of the period	14.3	14.4	1.1
2 Asset size	0.7	(0.4)	(0.1)
3 Asset quality	(0.2)	(0.2)	—
4 Model updates	—	1.0	—
5 Methodology and policy	(0.7)	(0.5)	(0.1)
9 RWAs at the end of the period	14.1	14.3	1.1

<sup>1</sup> This table includes RWA initiatives of \$0.9bn allocated across the RWA flow layers to which they relate.

The \$0.2bn decrease in counterparty credit risk RWAs under the IMM during the second quarter of the year is driven by RWA initiatives of \$0.9bn, partially offset by an increase in asset size of \$0.7bn.

Table 9: RWA flow statements of market risk exposures under the IMA<sup>1</sup>

	VaR	Stressed VaR	IRC	Other	Total RWAs <sup>1</sup>	Total capital requirements
	\$bn	\$bn	\$bn	\$bn	\$bn	\$bn

8 RWAs at 30 Jun 2017	8.8	14.5	11.8	4.7	39.8	3.2
1 RWAs at 1 Jan 2017	8.7	15.8	9.5	2.5	36.5	2.9
2 Movement in risk levels	0.8	(3.5)	0.6	(0.3)	(2.4)	(0.2)
3 Model updates/changes	—	—	—	—	—	—
4 Methodology and policy	—	—	—	—	—	—
8 RWAs at 31 Mar 2017	9.5	12.3	10.1	2.2	34.1	2.7

<sup>1</sup> This table includes RWA initiatives of \$0.7bn allocated across the RWA flow layers to which they relate.

The \$5.7bn increase in RWAs during the second quarter of the year is driven by movements in risk levels of \$6.5bn and a methodology update to VaR multipliers of \$1bn, partially offset by a \$1.8bn reduction as a result of model updates.

## Pillar 3 Disclosures at 30 June 2017

## Credit risk

Credit risk is the risk of financial loss if a customer or counterparty fails to meet an obligation under a contract. It arises principally from direct lending, trade finance and leasing business, but also from other products, such as guarantees and credit derivatives and from holding assets in the form of debt securities. Credit risk represents our largest regulatory capital

requirement. There have been no material changes to our policies and practices, which are described in the Capital and Risk Management Pillar 3 Disclosures 2016.

## Credit quality of assets

We are a universal bank with a conservative approach to credit risk. This is reflected in our credit risk profile being diversified across a number of asset classes and geographies with a credit quality profile concentrated in the higher quality bands.

Table 10: Credit quality of assets

	At 30 Jun 2017				31 Dec 2016			
	Gross carrying values of		Allowances/ impairments	Net values (a+b-c)	Gross carrying values of		Allowances/impairments	Net values (a+b-c)
	Defaulted exposures	Non-defaulted exposures			Defaulted exposures	Non- defaulted exposures		
	\$bn	\$bn	\$bn	\$bn	\$bn	\$bn	\$bn	
1 Loans	16.6	1,198.9	8.0	1,207.5	17.9	1,067.8	8.3	1,077.4
2 Debt securities	—	279.6	—	279.6	—	377.4	—	377.4
3 Off-balance sheet exposures	1.9	743.8	0.2	745.5	1.5	735.0	0.3	736.2
4 Total	18.5	2,222.3	8.2	2,232.6	19.4	2,180.2	8.6	2,191.0

## Defaulted exposures

The accounting definition of impaired and the regulatory definition of default are generally aligned. For particular retail exposures regulatory default is identified at 180 days past due, while the exposures are identified as impaired at 90 days

past due. In the retail portfolio in the US, for accounting purposes, a renegotiation would normally trigger identification as 'impaired', whereas for regulatory purposes, default is identified mainly based on the 180 days past due criterion.

Table 11: Changes in stock of defaulted loans and debt securities

	6 months to 30 Jun 2017	12 months to 31 Dec 2016
	Footnote \$bn	\$bn
1 Defaulted loans and debt securities at the beginning of the period	17.9	22.7
2 Loans and debt securities that have defaulted since the last reporting period	3.2	8.6
3 Returned to non-defaulted status	(1.2)	(1.5)
4 Amounts written off	(1.1)	(2.8)
5 Other changes	1 (0.1)	(5.1)
7 Repayments	(2.1)	(4.0)
6 Defaulted loans and debt securities at the end of the period	16.6	17.9

1 Other changes include foreign exchange and assets held for sale in default.

#### Risk mitigation

Our approach when granting credit facilities is to do so on the basis of capacity to repay, rather than placing primary reliance on credit risk mitigants. Depending on a customer's standing and the type of product, facilities may be provided unsecured. Mitigation of credit risk is a key aspect of effective risk management and takes many forms. Our general policy is to promote the use of credit risk mitigation, justified by commercial prudence and capital efficiency. Specifically, detailed policies cover the acceptability, structuring and terms with regard to the availability of credit risk mitigation; for example, in the form of collateral security.

These policies, together with the setting of suitable valuation parameters, are subject to regular review to ensure that they are supported by empirical evidence and continue to fulfil their intended purpose.

<sup>1</sup> High volatility commercial real estate ('HVCRE') exposures are not included in the above table. The value of exposures under HVCRE was nil at 30 Jun 2017 (31 Dec 2016: \$0.6bn).

## Pillar 3 Disclosures at 30 June 2017

## Counterparty credit risk

CCR risk arises for derivatives and SFTs. It is calculated in both the trading and non-trading books, and is the risk that a counterparty may default before settlement of the transaction. CCR is generated primarily in our wholesale global businesses.

Four approaches may be used under CRD IV to calculate exposure values for CCR: mark-to-market, original exposure, standardised and IMM. Exposure values calculated under these approaches are used to determine RWAs. Across the Group, we use the mark-to-market and IMM approaches.

Table 17: Analysis of counterparty credit risk ('CCR') exposure by approach (excluding centrally cleared exposures)

	Footnote	Replacement cost \$bn	Potential future exposure \$bn	Alpha used for computing regulatory EAD		EAD post-CRM \$bn	RWAs \$bn

Negative fair value (liability)		(2.7)	(1.7)	(3.1)	(2.7)

<sup>1</sup> This is where we act as an intermediary for our clients, enabling them to take a position in the underlying securities.

<sup>1</sup> This does not increase risk for HSBC.

## Securitisation

HSBC acts as originator, sponsor, liquidity provider and derivative counterparty to our own originated and sponsored securitisations, as well as those of third parties. Our strategy is to use securitisation to meet our needs for aggregate funding or capital management, to the extent that market, regulatory

treatments and other conditions are suitable, and for customer facilitation. We do not provide support to any of our originated or sponsored securitisations, and it is not our policy to do so.

We have senior exposures to three securities investment conduits ('SICs'): Mazarin Funding Limited, Barion Funding Limited and Malachite Funding Limited. We also hold all of the commercial paper issued by Solitaire Funding Limited. These are considered legacy businesses, and exposures are being repaid as the securities they hold amortise.

## Market risk

Market risk is the risk that movements in market factors, such as foreign exchange rates, interest rates, credit spreads, equity prices and commodity prices, will reduce our income or the value of our portfolios.

Exposure to market risk is separated into two portfolios:

• trading portfolios comprise positions arising from market-making; and

• non-trading portfolios comprise positions that primarily arise from the interest rate management of our retail and commercial banking assets and liabilities, financial investments designated as available-for-sale ('AFS') and held to maturity, and exposures arising from our insurance operations.

There were no material changes to the policies and practices for the management of market risk. A summary of our current policies and practices for the management of market risk is set out in 'Market risk management' on page 56 of the Capital and Risk Management Pillar 3 Disclosures 2016.

Table 28: Market risk under standardised approach

	At		
	30 Jun 2017	31 Dec 2016	30 Jun 2017
	RWAs	RWAs	Capital requirements
	\$bn	\$bn	\$bn
Outright products	2.1	3.5	0.2
1 – interest rate risk (general and specific)	1.9	1.5	0.2
2 – equity risk (general and specific)	0.1	1.7	—
3 – foreign exchange risk	0.1	0.3	—
8 Securitisation	1.7	1.5	0.1
9 Total	3.8	5.0	0.3

Table 29: Market risk under IMA

	At 30 Jun 2017	
	RWAs	Capital requirements
	\$bn	\$bn
1 VaR (higher of values a and b)	8.8	0.7
(a) Previous day's VaR		0.3
(b) Average daily VaR		0.7
2 Stressed VaR (higher of values a and b)	14.5	1.2
(a) Latest SVaR		0.5
(b) Average SVaR		1.2
3 Incremental risk charge (higher of values a and b)	11.8	0.9
(a) Most recent IRC value		0.9
(b) Average IRC value		0.9
5 Other	4.7	0.4
6 Total	39.8	3.2

## Pillar 3 Disclosures at 30 June 2017

Table 30: IMA values for trading portfolios

		At	
		30 Jun	31 Dec
		2017	2016
		\$m	\$m
VaR (10 day 99%)			
1	Maximum value	319.0	327.1
2	Average value	208.4	229.6
3	Minimum value	180.4	186.4
4	Period end	201.1	215.7
Stressed VaR (10 day 99%)			
5	Maximum value	385.2	454.0
6	Average value	324.3	389.9
7	Minimum value	198.2	269.7
8	Period end	309.4	269.7
Incremental risk charge (99.9%)			
9	Maximum value	1,033.3	1,100.7
10	Average value	938.5	787.0
11	Minimum value	673.4	697.3
12	Period end	908.4	705.6

The period end trading VaR, before the effect of portfolio diversification, was higher reflecting larger exposures. The effects of portfolio diversification reduced the overall trading

VaR. For the other two market risk capital models, Stressed VaR and Incremental risk charge, there were no material changes in portfolio profiles or concentrations and the fluctuations were within normal expectations.

Chart: Comparison of VaR estimates with gains/losses

Cautionary statement regarding forward-looking statements

The Capital and Risk Management Pillar 3 Disclosures at 30 June 2017 contains certain forward-looking statements with respect to HSBC's financial condition, results of operations, capital position and business.

Statements that are not historical facts, including statements about HSBC's beliefs and expectations, are forward-looking statements. Words such as 'expects', 'anticipates', 'intends', 'plans', 'believes', 'seeks', 'estimates', 'potential' and 'reasonably possible', variations of these words and similar expressions are intended to identify forward-looking statements. These statements are based on current plans, estimates and projections, and therefore undue reliance should not be placed on them. Forward-looking statements speak only as of the date they are made. HSBC makes no commitment to revise or update any forward-looking statements to reflect events or circumstances occurring or existing after the date of any forward-looking statements.

Written and/or oral forward-looking statements may also be made in the periodic reports to the US Securities and Exchange Commission, summary financial statements to shareholders, proxy statements, offering circulars and prospectuses, press releases and other written materials, and in oral statements made by HSBC's Directors, officers or employees to third parties, including financial analysts.

Forward-looking statements involve inherent risks and uncertainties. Readers are cautioned that a number of factors

could cause actual results to differ, in some instances materially, from those anticipated or implied in any forward-looking statement. These include, but are not limited to:

- changes in general economic conditions in the markets in which we operate, such as continuing or deepening recessions and fluctuations in employment beyond those factored into consensus forecasts; changes in foreign exchange rates and interest rates; volatility in equity markets; lack of liquidity in wholesale funding markets; illiquidity and downward price pressure in national real estate markets; adverse changes in central banks' policies with respect to the provision of liquidity support to financial markets; heightened market concerns over sovereign

creditworthiness in over-indebted countries; adverse changes in the funding status of public or private defined benefit pensions; and consumer perception as to the continuing availability of credit and price competition in the market segments we serve; changes in government policy and regulation, including the monetary, interest rate and other policies of central banks and other regulatory authorities; initiatives to change the size, scope of activities and interconnectedness of financial institutions in connection with the implementation of stricter regulation of financial institutions in key markets worldwide; revised capital and liquidity benchmarks which could serve to deleverage bank balance sheets and lower returns available from the current business model and portfolio mix; imposition of levies or taxes designed to change business mix and risk appetite; the practices, pricing or responsibilities of financial institutions serving their consumer markets; expropriation, nationalisation, confiscation of assets and changes in legislation relating to foreign ownership; changes in bankruptcy legislation in the principal markets in which we operate and the consequences thereof; general changes in government policy that may significantly influence investor decisions; extraordinary government actions as a result of current market turmoil; other unfavourable political or diplomatic developments producing social instability or legal uncertainty which in turn may affect demand for our products and services; the costs, effects and outcomes of product regulatory reviews, actions or litigation, including any additional compliance requirements; and the effects of competition in the markets where we operate including increased competition from non-bank financial services companies, including securities firms; and factors specific to HSBC, including discretionary RWA growth and our success in adequately identifying the risks we face, such as the incidence of loan losses or delinquency, and managing those risks (through account management, hedging and other techniques). Effective risk management depends on, among other things, our ability through stress testing and other techniques to prepare for events that cannot be captured by the statistical models it uses; and our success in addressing operational, legal and regulatory, and litigation challenges, notably compliance with the DPA.
