Mr. Andrei Ushatskiy, MTS Vice President, Chief Technology and Information Officer, remarked, "We welcome the first auction for frequencies to be held in Russia. It is a universally accepted practice to distribute frequencies through a transparent and competitive process. The introduction of this practice in Russia will stimulate development of state-of-the-art data networks and make high-speed mobile Internet access more broadly available. Since we first received our LTE license in 2012, MTS has been fulfilling licensing requirements ahead of schedule and

has already launched LTE networks in 78 of Russia's regions. With additional spectrum, we will be able to enhance existing networks and deliver higher speeds and greater coverage on new tech-neutral LTE networks, while reducing construction costs. A typical base station provisioning LTE-1800 provides four times greater coverage of a similar base station in the LTE-2600 range. By combining our LTE-2600 and LTE-1800 spectrum through Carrier Aggregation, we can increase peak speeds up to 187 Mb/s.

Previously, in June 2015, MTS signed agreements with the vendors to purchase multiband and technology neutral network equipment for the roll-out of LTE-Advanced networks. In 2015, MTS plans to launch tech-

neutral LTE-2600 networks in 19 regions in Russia and LTE-Advanced networks with aggregation across two and three carriers in 15 regions.
