KVH INDUSTRIES, INC. AND SUBSIDIARY

Notes to Condensed Consolidated Financial Statements

(Unaudited, all amounts in thousands except share and per share amounts)

(1) Description of Business

KVH Industries, Inc. (the Company or KVH) develops, manufactures and markets mobile communications products for the land mobile, in-flight and marine markets, and navigation, guidance and stabilization products for both defense and commercial markets.

KVH's mobile communications products enable customers to receive live digital television, telephone and Internet services in their automobiles, recreational vehicles and marine vessels while in motion via satellite and wireless services. KVH sells its mobile communications products through an extensive international network of retailers, distributors and dealers.

KVH's mobile communications service sales includes sales earned from product repairs, sales from satellite telephone and Internet usage services, and certain DIRECTV and DISH Network account subsidies and referral fees earned in conjunction with the sale of our products. We provide, for a fee, third-party satellite telephone and Internet airtime to our TracPhone and Internet customers who choose to activate their subscriptions with us. We also earn service sales from Broadband Internet and Voice over Internet Protocol (VOIP) service sold with our mini-VSAT products. Under current DIRECTV and DISH Network programs, we are eligible to receive a one-time subsidy for each receiver activated for service and a new mobile account activation fee from DIRECTV and DISH Network for each customer who activates their DIRECTV or DISH Network service directly through us.

KVH offers precision fiber optic gyro-based systems that enable platform stabilization and munitions guidance. KVH's guidance and stabilization products also include tactical navigation systems that provide uninterrupted access to navigation and pointing information in a spectrum of military vehicles, including tactical trucks and light armored vehicles. KVH's guidance and stabilization products are sold directly to United States (U.S.) and allied governments and government contractors, as well as through an international network of authorized independent sales representatives. In addition, KVH's guidance and stabilization products have numerous commercial applications such as train location control and track geometry measurement systems, industrial robotics and optical stabilization.

KVH's guidance and stabilization service sales includes product repairs and engineering services provided under development contracts.

(2) Basis of Presentation

The accompanying condensed consolidated financial statements of KVH Industries, Inc. and its wholly owned subsidiary, KVH Europe A/S (collectively, KVH or the Company), have been prepared pursuant to the rules and regulations of the United States Securities and Exchange Commission regarding interim financial reporting. Given that KVH Europe A/S operates as the Company's European and international distributor, all of its operating expenses are reflected within sales, marketing and support within the accompanying condensed consolidated statements of operations. All significant intercompany accounts and transactions have been eliminated in consolidation. Certain prior year amounts have been reclassified to conform to the current year presentation. The condensed consolidated financial statements have not been audited by our independent registered public accounting firm, but include all adjustments (consisting of only normal recurring adjustments) which are, in the opinion of management, necessary for a fair presentation of the financial condition, results of operations, and cash flows for the periods

Table of Contents

presented. These condensed consolidated financial statements do not include all disclosures associated with annual financial statements and accordingly should be read in conjunction with the Company's consolidated financial statements and related notes included in the Company's Annual Report on Form 10-K filed on March 13, 2008 with the Securities and Exchange Commission. The results for the three and six months ended June 30, 2008 are not necessarily indicative of operating results for the remainder of the year.

(3) Significant Estimates and Assumptions

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities as of the date of the financial statements and the reported amounts of sales and expenses during the reporting periods. Significant estimates and assumptions by management affect the Company's revenue recognition, valuation of accounts receivable, valuation of inventory, deferred tax assets, certain accrued expenses and accounting for contingencies.

Although the Company regularly assesses these estimates, actual results could differ materially from these estimates. Changes in estimates are recorded in the period in which they become known. The Company bases its estimates on historical experience and various other assumptions that it believes to be reasonable under the circumstances.

(4) Stock-Based Compensation

The Company recognizes stock-based compensation in accordance with the provisions of Statement of Financial Accounting Standards (SFAS) No. 123(R), Share-Based Payment. Stock-based compensation expense was \$433 and \$312 for the three months ended June 30, 2008 and June 30, 2007, respectively and \$789 and \$525 for the six months ended June 30, 2008 and June 30, 2007, respectively. As of June 30, 2008, there was approximately \$1.8 million of total unrecognized compensation expense related to stock options, which is expected to be recognized over a weighted-average period of 1.95 years. As of June 30, 2008, there was approximately \$1.7 million of total unrecognized compensation expense related to restricted stock awards which is expected to be recognized over a weighted-average period of 3.54 years.

The Company granted 13,000 and 215,965 restricted stock awards to employees under the terms of the 2006 Stock Incentive Plan during the three and six months ended June 30, 2008, respectively. The restricted stock awards vest ratably over four years from the date of grant subject to the recipient remaining employed through the applicable vesting dates. Compensation expense for restricted stock awards is measured at fair value on the date of grant based on the number of shares granted and the quoted market closing price of the Company's common stock. Such value is recognized as expense over the vesting period of the award, net of estimated forfeitures.

The Company also granted 3,000 and 8,000 stock options to employees under the terms of the 2006 Stock Incentive Plan during the three and six months ended June 30, 2008, respectively.

A total of 97,500 of the restricted stock awards granted during the six months ended June 30, 2008 were performance based awards granted to executives. These restricted stock awards will vest ratably over four years, the first of which will vest on February 28, 2009, provided that the sales of the Company for the year ending December 31, 2008 is at least 20% higher than the sales of the Company for the year ended December 31, 2007. The executive must also be employed by the Company at the time of vesting. The Company recorded stock-based compensation expense of \$16 and \$46 related to the performance-based restricted stock awards for the three and six months ended June 30, 2008, respectively.

The fair value of stock options granted for the six months ended June 30, 2008 was estimated as of the date of grant using the Black-Scholes option-pricing model. The weighted average fair value per share for all options granted during the three months ended June 30, 2008 was \$3.51. The Company did not grant any options for the three months ended June 30, 2007. The weighted average fair value per share for all options granted during the six months ended June 30, 2008 and 2007 was \$3.09 and \$4.36, respectively. The weighted-average assumptions used to value options as of their grant date were as follows:

Six months ended
June 30,
2008 2007

Edgar Filing: KVV INDUSTRIES INC \DE\ - Form 10-Q

Risk-free interest rate	2.89%	4.46%
Expected volatility	41.96%	49.58%
Expected life (in years)	4.23	4.13
Dividend yield	0%	0%

Table of Contents**(5) Net Income per Common Share**

Basic net income per share is calculated based on the weighted average number of common shares outstanding during the period. Diluted net income per share incorporates the dilutive effect of common stock equivalent options, warrants and other convertible securities, if any, as determined with the treasury stock accounting method. Common stock equivalents related to options and restricted stock awards to purchase 1,257,622 and 1,290,348 shares of common stock for the three and six months ended June 30, 2008, respectively, have been excluded from the fully diluted calculation of income per share, as inclusion would be anti-dilutive. Common stock equivalents related to options and restricted stock awards to purchase 1,440,273 and 1,440,173 shares of common stock for the three and six months ended June 30, 2007, respectively, have been excluded from the fully diluted calculation of income per share, as inclusion would be anti-dilutive.

A reconciliation of the basic and diluted weighted average common shares outstanding is as follows:

	Three months ended June 30,		Six months ended June 30,	
	2008	2007	2008	2007
Weighted average common shares outstanding basic	14,463,406	15,016,249	14,566,475	14,962,249
Dilutive common shares issuable in connection with stock plans	26,778	15,107	5,608	35,213
Weighted average common shares outstanding diluted	14,490,184	15,031,356	14,572,083	14,997,462

(6) Inventories

Inventories are stated at the lower of cost or market using the first-in first-out costing method. Inventories as of June 30, 2008 and December 31, 2007 include the costs of material, labor, and factory overhead. Components of inventories consist of the following:

	June 30, 2008	December 31, 2007
Raw materials	\$ 7,013	\$ 5,628
Work in process	1,687	1,299
Finished goods	3,077	2,386
	\$ 11,777	\$ 9,313

(7) Comprehensive Income

Comprehensive income includes net income and other comprehensive income. Other comprehensive income includes the effects of unrealized gains or losses on available-for-sale marketable securities that are separately included in accumulated other comprehensive income within stockholders' equity. The Company's comprehensive income for the periods presented is as follows:

	Three months ended June 30,		Six months ended June 30,	
	2008	2007	2008	2007
Net income	\$ 1,984	\$ 1,501	\$ 3,565	\$ 1,558
Unrealized gain on available-for-sale securities	3		3	14
Total comprehensive income	\$ 1,987	\$ 1,501	\$ 3,568	\$ 1,572

Table of Contents**(8) Product Warranty**

The Company's products carry limited warranties that range from one to two years and vary by product. The warranty period begins on the date of retail purchase by the original purchaser. The Company accrues estimated product warranty costs at the time of sale and any additional amounts are recorded when such costs are probable and can be reasonably estimated. Factors that affect the Company's warranty liability include the number of units sold, historical and anticipated rates of warranty repairs and the cost per repair. Warranty and related costs are reflected within sales, marketing and support in the accompanying statements of operations. As of June 30, 2008 and December 31, 2007, the Company had accrued product warranty costs of \$1,055 and \$778, respectively. The following table summarizes product warranty activity for the periods presented:

	Six months ended June 30,	
	2008	2007
Beginning balance	\$ 778	\$ 539
Charges to expense	737	581
Costs incurred	(460)	(372)
Ending balance	\$ 1,055	\$ 748

(9) Segment Reporting

Under common operational management, the Company designs, develops, manufactures and markets its navigation, guidance and stabilization and mobile communication products for use in a wide variety of applications. Products are generally sold directly to third-party consumer electronic dealers and retailers, consumer manufacturers, government contractors or directly to U.S. and other foreign government agencies. Primarily, sales originating in North America consist of sales within the United States and Canada and, to a lesser extent, Mexico, Asia/Pacific and some Latin and South American countries. North American sales also include all guidance and stabilization product sales throughout the world. Sales originating from the Company's Denmark subsidiary principally consist of sales into all European countries, both inside and outside the European Union, as well as Africa, the Middle East, India and all countries in Asia.

The Company operates in two geographic segments, exclusively in the mobile communications, navigation and guidance equipment industry, which it considers to be a single business activity. The Company has two primary industry categories: mobile communication and guidance and stabilization. Mobile communication sales include marine, automotive and land mobile communication equipment, product repairs, satellite-based telephone and Internet usage services, television account subsidies and referral fees earned in conjunction with the sale of our products, and Broadband Internet connectivity and VOIP services sold with our min-VSAT products. Guidance and stabilization product sales include sales of commercial marine and defense-related navigation, guidance and stabilization equipment based upon digital compass and fiber optic sensor technology. Guidance and stabilization sales also include product repairs and engineering services provided under development contracts.

Table of Contents

(10) Legal Matters

From time to time, the Company is involved in litigation incidental to the conduct of its business. In the ordinary course of business, KVH is a party to inquiries, legal proceedings and claims including, from time to time, disagreements with vendors and customers. The Company is not party to any lawsuit or proceeding that, in management's opinion, is likely to materially harm the Company's business, results of operations, financial condition or cash flows.

Table of Contents

(11) Recent Accounting Pronouncements

In March 2008, the Financial Accounting Standards Board (FASB) issued SFAS No. 161, "Disclosures about Derivative Instruments and Hedging Activities," an amendment of FASB Statement No. 133 (SFAS No. 161). This statement is intended to improve transparency in financial reporting by requiring enhanced disclosures of an entity's derivative instruments and hedging activities and their effects on the entity's financial position, financial performance, and cash flows. SFAS No. 161 applies to all derivative instruments within the scope of SFAS No. 133,

"Accounting for Derivative Instruments and Hedging Activities" as well as related hedged items, bifurcated derivatives, and nonderivative instruments that are designated and qualify as hedging instruments. Entities with instruments subject to SFAS No. 161 must provide more robust qualitative disclosures and expanded quantitative disclosures. SFAS No. 161 is effective prospectively for financial statements issued for fiscal years and interim periods beginning after November 15, 2008, with early application permitted. As of June 30, 2008 the adoption of SFAS No. 161 would not have an impact on the Company's financial position or results of operations.

(12) Share Buyback Program

On July 26, 2007, the Company's Board of Directors authorized a program to repurchase up to one million shares of the Company's common stock. As of June 30, 2008, 274,563 shares of the Company's common stock remain available for repurchase under the authorized program. The repurchase program is funded using the Company's existing cash, cash equivalents, marketable securities and future cash flows. Under the repurchase program, the Company, at management's discretion, may repurchase shares on the open market from time to time, in privately negotiated transactions or block transactions, or through an accelerated repurchase agreement. The timing of such repurchases depends on availability of shares, price, market conditions, alternative uses of capital, and applicable regulatory requirements. The program may be modified, suspended or terminated at any time without prior notice. The repurchase program has no expiration date. There were no other repurchase programs outstanding during the six months ended June 30, 2008, and no repurchase programs expired during the period.

The Company repurchased 167,219 and 484,437 shares of its common stock in the three month and six months ended June 30, 2008, respectively, at a cost of \$1.5 million and \$4.1 million.

(13) Long-Term Aviation Antenna Development and Production Agreement

On February 18, 2008, the Company entered into a \$20.1 million long-term antenna development and production agreement (the "Agreement"). Under the terms of the Agreement, the Company will design, develop, and manufacture DIRECTV-compatible satellite television antennas to be used on narrowbody commercial aircraft operating in the United States. In accordance with Emerging Issues Task Force Issue No. 99-5,

"Accounting for Pre-Production Costs Related to Long-Term Supply Arrangements," and the Agreement, the Company has capitalized \$1.2 million in related development costs, which the Company has a contractual right to recover, and are reflected in other non-current assets as of June 30, 2008. These costs will be expensed into costs of sales as antennas are sold in proportion to the number of antennas delivered versus the total contractual antenna production requirement. The Company expects to begin production of the antennas in the fourth quarter of 2008.

(14) Fair Value Measurements

Effective January 1, 2008, the Company adopted the required provisions of SFAS No. 157. SFAS No. 157 defines fair value as the exchange price that would be received for an asset or paid to transfer to a liability (an exit price) in the principal or most advantageous market for the asset or liability in an orderly transaction between market participants on the measurement date. SFAS No. 157 also establishes a fair value hierarchy, which requires an entity to maximize the use of observable inputs and minimize the use of unobservable inputs when measuring fair value. SFAS No. 157 describes three levels of inputs that may be used to measure fair value:

- Level 1:** Unadjusted quoted prices in active markets that are accessible at the measurement date for identical, unrestricted assets or liabilities. The Company's Level 1 assets are investments in money market mutual funds, government agency bonds and United States treasuries.
- Level 2:** Quoted prices for similar assets or liabilities in active markets; or observable prices that are based on observable market data, based on, directly or indirectly market-corroborated inputs. The Company's Level 2 liabilities include foreign currency forward contracts that are traded in an active exchange market.

Level 3: Unobservable inputs that are supported by little or no market activity, and are developed based on the best information available given the circumstances. The Company has no Level 3 inputs.

Table of Contents

The following table presents assets and liabilities at June 30, 2008 that the Company measures fair value on a recurring basis, by level, within the fair value hierarchy:

	Level 1	Level 2	Level 3	Total
Assets				
Money market mutual funds	\$ 31,656			\$ 31,656
Government agency bonds	6,022			6,022
United States treasuries	3,962			3,962
Liabilities				
Foreign currency forward contracts		116		116

Certain financial instruments are carried at cost on the condensed consolidated balance sheets, which approximates fair value due to their short-term, highly liquid nature. These instruments include cash and cash equivalents, accounts receivable, accounts payable, and accrued expenses. The fair value of foreign currency forward contracts generally reflects the estimated amounts that the Company would receive or pay, on a pre-tax basis, to terminate the contracts at the reporting date based on broker quotes for the same or similar instruments. Counterparties to these contracts are highly rated financial institutions, none of which experienced any significant downgrades in the three and six months ended June 30, 2008 that would reduce the amount owed, if any, to the Company.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Introduction

The statements included in this quarterly report on Form 10-Q, other than statements of historical fact, are forward-looking statements. Examples of forward-looking statements include statements regarding our future financial results, operating results, business strategies, projected costs, products, competitive positions and plans, customer preferences, consumer trends, anticipated product development, and objectives of management for future operations. In some cases, forward-looking statements can be identified by terminology such as may, will, should, would, expects, plans, anticipates, believes, estimates, predicts, potential, continue, or the negative of these terms or other comparable terminology. Any expectations based on these forward-looking statements are subject to risks and uncertainties and other important factors, including those discussed in the section entitled Risk Factors in Item 1A of Part II of this quarterly report. These and many other factors could affect our future financial and operating results, and could cause actual results to differ materially from expectations based on forward-looking statements made in this document or elsewhere by us or on our behalf. For example, our expectations regarding certain items as a percentage of sales assume that we will achieve our anticipated sales goals. The following discussion and analysis should be read in conjunction with our condensed consolidated financial statements and related notes appearing elsewhere in this report.

Overview

We design and manufacture equipment that connects mobile users on land, at sea, or in-flight to satellite services that provide access to live satellite TV, telephone and/or high-speed Internet. We also produce a guidance and stabilization product line based on our proprietary fiber optic gyro (FOG) and digital compass technology, with products ranging from directional sensors and rate gyros to inertial measurement units and navigation systems.

Our mobile satellite business includes receive-only TracVision satellite TV systems and 2-way TracPhone satellite communications systems. Our TracVision mobile satellite TV systems enable mobile reception in vehicles or vessels of most leading satellite TV services, such as DIRECTV, DISH Network, and ExpressVu in North America, and Astra and Eutelsat in Europe. In February 2008, we entered the aviation market with a development and production contract for a satellite TV antenna that will be sold on an OEM basis. Our TracPhone satellite communications systems enable reception of Inmarsat L-Band MSS services or our own mini-VSAT Broadband Ku-band FSS service, and are sold primarily to mariners. We sell our mobile satellite products through our direct sales force and an extensive international network of independent sales representatives, distributors and retailers to leisure, commercial, and government customers.

Our guidance and stabilization products use our precision FOG and digital compass technologies to help stabilize platforms such as antennas, gun turrets, optical systems, material handling equipment, and radar units and to provide guidance for torpedoes and other munitions. These products are either integrated within our own navigation and antenna systems or sold as modules to other manufacturers. We also use our FOG digital compass technology to produce some variants of our TACNAV line of navigation systems for military vehicles. We sell our guidance and

stabilization products to commercial and military customers either directly to U.S. and allied governments and government contractors and through an international network of authorized independent sales representatives.

Table of Contents

We generate sales primarily from the sale of our mobile satellite systems and services and our guidance and stabilization products and services. The following table provides, for the periods indicated, our net sales by industry category:

	Three months ended June 30, (in thousands)		Six months ended June 30, (in thousands)	
	2008	2007	2008	2007
Mobile communications	\$ 18,263	\$ 17,497	\$ 36,330	\$ 33,553
Guidance and stabilization	4,052	5,750	9,118	10,092
Net sales	\$ 22,315	\$ 23,247	\$ 45,448	\$ 43,645

Our mobile communications service sales includes sales earned from product repairs, sales from satellite telephone and Internet usage services, and certain DIRECTV and DISH Network account referral fees earned in conjunction with the sale of our products. We provide, for a fee, third-party satellite telephone and Internet airtime to our TracPhone and Internet customers who choose to activate their subscriptions with us. We also earn service sales from Broadband Internet and VOIP service sold with our mini-VSAT products. Under current DIRECTV and DISH Network programs, we are eligible to receive a one-time subsidy for each receiver activated and a new mobile account activation fee from DIRECTV and DISH Network for each customer who activates their DIRECTV or DISH Network service directly through us. Our guidance and stabilization service sales includes product repairs and engineering services provided under development contracts. To date, none of our sources of service sales, including sales earned from product repairs, satellite telephone and VOIP services, engineering services under development contracts, Internet usage services and DIRECTV and DISH Network activations, has individually been a material portion of sales. In the aggregate, such sales represented approximately 14% and 8% of total net sales for the three months ended June 30, 2008 and 2007, and approximately 11% and 8% of total net sales for the six months ended June 30, 2008 and 2007, respectively.

Our guidance and stabilization business is characterized by a small number of customers who place a small number of relatively large dollar value orders. Orders for our guidance and stabilization products typically vary in size and are sometimes in the range of several hundred thousand dollars to over one million dollars. Each order can have a significant impact on our net sales, and because our guidance and stabilization products generally have higher direct gross margins than our mobile communications products, each order can have an impact on our net income that is disproportionately large relative to the sales generated by the order.

We have historically derived a substantial portion of our sales from sales to customers located outside the United States. Note 9 of the notes to the condensed consolidated financial statements provide information regarding our sales to specific geographic regions.

Critical Accounting Policies

The discussion and analysis of our financial condition and results of operations are based upon our condensed consolidated financial statements, which have been prepared in accordance with accounting principles generally accepted in the United States. The preparation of these financial statements requires us to make estimates and judgments that affect the reported amounts of assets and liabilities, sales and expenses, and related disclosure at the date of our financial statements. Our significant accounting policies are summarized in note 1 of the notes to the consolidated financial statements in our Annual Report on Form 10-K for the year ended December 31, 2007.

As described in our Form 10-K for the year ended December 31, 2007, our most critical accounting policies and estimates upon which our consolidated financial statements were prepared were those relating to revenue recognition, allowances for accounts receivable, inventories, income taxes and warranty. We have reviewed our policies and determined that these remain our most critical accounting policies for the quarter ended June 30, 2008. Readers should refer to our 2007 Form 10-K for the detailed descriptions of these policies.

Table of Contents**Results of Operations**

The following table provides, for the periods indicated, certain financial data expressed as a percentage of net sales:

	Three months ended June 30,		Six months ended June 30,	
	2008	2007	2008	2007
Sales:				
Product	85.9 %	92.1 %	88.9 %	91.7 %
Service	14.1	7.9	11.1	8.3
Total sales	100.0	100.0	100.0	100.0
Cost and expenses:				
Cost of product sales	52.0	54.1	52.9	55.9
Cost of service sales	6.2	3.5	5.1	4.1
Sales, marketing and support	18.7	16.3	18.2	17.9
Research and development	7.4	10.9	8.8	10.8
General and administrative	6.9	10.0	7.2	9.4
Total costs and expenses	91.2	94.8	92.2	98.1
Income from operations	8.8	5.2	7.8	1.9
Interest income	1.4	3.0	1.7	3.2
Interest expense	0.2	0.2	0.2	0.2
Other income (expense), net	0.0	(0.1)	(0.5)	(0.1)
Income before income taxes	10.0	7.9	8.8	4.8
Income tax expense	1.1	1.4	1.0	1.2
Net income	8.9 %	6.5 %	7.8%	3.6 %

Three Months Ended June 30, 2008 and 2007***Net Sales***

Product sales for the three months ended June 30, 2008 decreased \$2.2 million, or 10%, to \$19.2 million from \$21.4 million for the three months ended June 30, 2007. The primary reason for the decrease was a decrease in sales of our defense-related products of \$2.2 million, or 42%, from the three months ended June 30, 2007 to the three months ended June 30, 2008. Specifically, sales of our FOG products decreased \$1.4 million, or 51%, driven largely by decreased sales in support of the U.S. Army's remotely operated weapons station program, and to a lesser extent decreased sales in support of the U.S. Navy's MK54 torpedo program. Also contributing to the decrease was a \$0.9 million, or 40%, decrease in sales related to our TACNAV defense products.

Overall, sales of our mobile communications products were flat with the year-ago period at \$16.1 million. However, for the three months ended June 30, 2008, sales of our land mobile products decreased \$2.2 million, or 45%, driven by decreased recreational vehicle sales, resulting from increased fuel prices and challenging consumer credit markets. Offsetting the decrease was an increase in sales of our marine products of \$2.2 million, or 19%, driven primarily by demand for our TracPhone V7 product that we launched in the fourth quarter of 2007 and to a lesser extent sales of Inmarsat-compatible TracPhone products. Mobile communications product sales originating from our Danish subsidiary increased \$1.0 million, or 21%, from the three months ended June 30, 2007 to the three months ended June 30, 2008. Contributing to the sales increase were favorable currency rate fluctuations between the Euro and the U.S. dollar. Mobile communications product sales originating from North America decreased \$1.0 million, or 9%, from the three months ended June 30, 2007 to the three months ended June 30, 2008.

Table of Contents

Service sales for the three months ended June 30, 2008 increased \$1.3 million, or 71%, to \$3.1 million from \$1.8 million for the three months ended June 30, 2007. The primary reason for the increase was an increase in airtime service sales, specifically in relation to our mini-VSAT Broadband service that we launched in the fourth quarter of 2007. Also contributing to the increase was an increase in commission sales from DIRECTV for television receiver activations, \$0.2 million of which were billed and paid during the second quarter that related to certain prior period activations, as well as an increase in service repair sales.

Cost of Sales

For the three months ended June 30, 2008, costs of sales decreased \$0.4 million, or 3%, to \$13.0 million from \$13.4 million for the three months ended June 30, 2007. The primary reason for the modest overall decrease in costs of product sales, despite our overall 10% decrease in net product sales discussed above, is an overall decrease in net sales of our relatively higher margin defense-related products, partially offset by an increase in our marine mobile communications products for the quarter ended June 30, 2008. Partially offsetting the costs of product sales decrease was a 69% increase in costs of service sales for the three months ended June 30, 2008, driven largely by an increase in airtime service sales, specifically in relation to our mini-VSAT Broadband service that we launched in the fourth quarter of 2007.

Gross margin for the three months ended June 30, 2008, decreased from the year-ago period by less than one percentage point to remain at approximately 42%. The primary reason for the slight decrease in gross margin was the overall decrease in net product sales of our relatively higher margin defense-related products and an increase in marine mobile communications products during the three-month period ended June 30, 2008. Partially offsetting the effect of these changes was a 71% increase in our relatively higher margin service sales for the three months ended June 30, 2008, including the aforementioned, \$0.2 million of service sales related to commission sales from DIRECTV. Given that we expect a sequential decline in our leisure marine business as a result of both seasonality and a significant buildup of FOG production capacity that will be required to fulfill an order for the U.S. Army's remotely operated weapon stations, we expect the gross margin percentage will decline from the second quarter levels of 42% to between 38% and 39% in the upcoming third quarter.

Operating Expenses

Sales, marketing and support expense for the three months ended June 30, 2008 increased by \$0.4 million, or 10%, to \$4.2 million from \$3.8 million for the three months ended June 30, 2007. As a percentage of net sales, sales, marketing and support expense increased during the quarter ended June 30, 2008 to 19% from 16% for the quarter ended June 30, 2007. The primary reason for the dollar increase in 2008 was a \$0.4 million increase in sales, marketing and support expense related to our Danish subsidiary in support of a 24% increase in sales by the subsidiary year-over-year. Also contributing to the increase in sales, marketing and support expense of our Danish subsidiary was a 16% increase in the average valuation of the Danish Krone versus the U.S. dollar year-over-year. We anticipate that, for the third quarter of 2008, sales, marketing and support expenses should be modestly lower than the second quarter levels, primarily due to our continued effort to reduce discretionary spending.

Research and development expense for the three months ended June 30, 2008 decreased by \$0.9 million, or 35%, to \$1.6 million from \$2.5 million for the three months ended June 30, 2007. As a percentage of net sales, research and development expense decreased during the quarter ended June 30, 2008 to 7% from 11% for the quarter ended June 30, 2007. The primary reason for the decrease in 2008 was the capitalization of approximately \$1.0 million of aviation antenna development costs (see note 13 to the condensed consolidated financial statements) during the second quarter of 2008, partially offset by increased spending related to our initiative for the global expansion of our mini-VSAT Broadband satellite communication service. Our overall spending in 2008 continues to be focused on sustaining our existing product base and advancing new products. We anticipate that, for the third quarter of 2008, research and development expenses will be marginally higher than the second quarter levels, primarily due to the addition of resources in support of the continued development of the aviation antenna and other on-going new product projects.

General and administrative expense for the three months ended June 30, 2008 decreased by \$0.8 million, or 34%, to \$1.5 million from \$2.3 million, for the three months ended June 30, 2007. As a percentage of net sales, general and administrative expense decreased during the quarter ended June 30, 2008 to 7% from 10% for the quarter ended June 30, 2007. The primary reason for the decrease in 2008 was a \$0.7 million reduction in legal expense due to our August 2007 favorable judgment in the U.S. District Court for the District of Minnesota in relation to a patent infringement lawsuit. We anticipate that, for the third quarter of 2008, general and administrative expenses will be about equal to second quarter levels.

Table of Contents***Interest and Other Income***

Interest and other income for the three months ended June 30, 2008 decreased by \$0.3 million to \$0.3 million from \$0.6 million for the three months ended June 30, 2007. The primary reason for the decrease is decreased interest income of \$0.4 million in the 2008 period on cash, cash equivalents and marketable securities, resulting from lower interest rates and a slightly lower average amount of cash, cash equivalents and marketable securities invested during the three months ended June 30, 2008.

Income Taxes

Income tax expense for the three months ended June 30, 2008 decreased by \$0.1 million to \$0.2 million from \$0.3 million for the three months ended June 30, 2007. We expect that substantially all of our 2008 taxable income generated from our U.S. operations will be offset by federal net operating losses generated by us in prior years. Accordingly, we expect that any tax expense generated by our U.S. operations in 2008 will be made up primarily of federal alternative minimum tax and to a lesser extent certain state tax expense. Taxable income generated by our subsidiary in Denmark will be subject to taxation at the Danish statutory rates as we have no net operating loss carry-forwards or tax credits available to offset current or future taxable income in that jurisdiction. We regularly evaluate our valuation allowance recorded against our net deferred tax assets. Should we generate net income in 2008 and project net income for 2009 and beyond, we may determine, after considering all available evidence, that it is more likely than not that all or some additional portion of our net deferred tax assets would be realized. Should that determination be made, we would reverse all or a portion of our deferred tax assets valuation allowance at such time and recognize a reduction of income tax expense (as of June 30, 2008, the amount of reduction which could impact income tax expense totaled approximately \$0.6 million). In addition, as a portion of our deferred tax assets were generated from excess tax deductions from share-based payment awards, pursuant to SFAS No. 123(R), a portion of any such valuation allowance reversal would be recorded to additional paid-in capital when the deduction reduces tax payable (as of June 30, 2008, such amount would total approximately \$1.9 million).

Six Months Ended June 30, 2008 and 2007***Net Sales***

Product sales for the six months ended June 30, 2008 increased \$0.4 million, or 1%, to \$40.4 million from \$40.0 million for the six months ended June 30, 2007. The primary reason for the increase was an increase in sales of our mobile communications products of \$1.8 million, or 6%, from the six months ended June 30, 2007 to the six months ended June 30, 2008. Specifically, for the six months ended June 30, 2008, sales of our marine products increased \$4.4 million, or 21%, driven primarily by demand for our TracPhone V7 product that we launched in the fourth quarter of 2007 and to a lesser extent by sales of Inmarsat compatible TracPhone products. Partially offsetting the increase was a decrease in sales of our land mobile products of \$2.6 million, or 27%, driven by decreased recreational vehicle sales, resulting from increased fuel prices and challenging consumer credit markets. The improvement in mobile communications product sales was driven by a \$2.4 million or 26% increase in sales originating from our Danish subsidiary from the six months ended June 30, 2007 to the six months ended June 30, 2008. Contributing to the sales increase were favorable currency rate fluctuations between the Euro and the U.S. dollar. Mobile communications product sales originating from North America decreased \$0.6 million, or 2%, from the six months ended June 30, 2007 to the six months ended June 30, 2008.

Sales of our defense-related products decreased \$1.5 million, or 16%, from the six months ended June 30, 2007 to the six months ended June 30, 2008. Specifically, sales of our FOG products decreased \$1.5 million, or 29%, driven largely by decreased sales in support of the U.S. Army's remotely operated weapons station program.

Service sales for the six months ended June 30, 2008 increased \$1.4 million, or 39%, to \$5.0 million from \$3.6 million for the six months ended June 30, 2007. The primary reason for the increase was an increase in airtime service sales, specifically in relation to our mini-VSAT Broadband service that we launched in the fourth quarter of 2007. Also contributing to the increase was an increase in commission payments from DIRECTV for television receiver activations, \$0.2 million of which were billed and paid during the second quarter that related to certain prior period activations, as well as an increase in service repair sales.

Cost of Sales

For the six months ended June 30, 2008, costs of sales increased \$0.2 million, or 1%, to \$26.4 million from \$26.2 million for the six months ended June 30, 2007. On a percentage basis, the increase in our cost of sales was less than the increase in our total sales. The primary reason for the increase in costs of sales was a 29% increase in our costs of service sales for the six months ended June 30, 2008. This increase was driven largely by an increase in airtime service sales, specifically in relation to our mini-VSAT Broadband service that we launched in the fourth quarter of 2007. Our overall service sales provide relatively higher gross margins than our product sales. On a percentage basis, the 1% increase in our cost of product sales was consistent with the increase in product sales from the six months ended June 30, 2007 to the six months ended

June 30, 2008.

Gross margin for the six months ended June 30, 2008 was 42% compared to 40% for the six months ended June 30, 2007. The primary reason for the increase in gross margin was the overall increase in net marine product sales discussed above, partially offset by an overall decrease in net product sales of our relatively higher margin defense-related products for the six months end June 30, 2008. Also contributing to the increased gross margin to a lesser extent was a 39% increase in our relatively higher margin service sales for the six months ended June 30, 2008.

Table of Contents

Operating Expenses

Sales, marketing and support expense for the six months ended June 30, 2008 increased by \$0.5 million, or 6%, to \$8.3 million from \$7.8 million for the six months ended June 30, 2007. As a percentage of net sales, year-to-date sales, marketing and support expense remained fairly consistent on a year-over-year basis at 18%. The primary reason for the dollar increase in 2008 was a \$0.5 million increase in sales, marketing and support expense related to our Danish subsidiary in support of a 28% increase in sales by the subsidiary from the first half of 2007 to the first half of 2008. Also contributing to the increase in sales, marketing and support expense of our Danish subsidiary was a 15% increase in the average valuation of the Danish Krone versus the U.S. dollar year-over-year.

Research and development expense for the six months ended June 30, 2008 decreased by \$0.7 million, or 16%, to \$4.0 million from \$4.7 million for the six months ended June 30, 2007. As a percentage of net sales, year-to-date research and development expense decreased to 9% in 2008 from 11% in 2007. The primary reason for the decrease in 2008 was the capitalization of approximately \$1.2 million of aviation antenna development costs (see note 13 to the condensed consolidated financial statements) during the six months ended June 30, 2008, partially offset by increased spending related to our initiative for the global expansion of our mini-VSAT Broadband satellite communication service.

General and administrative expense for the six months ended June 30, 2008 decreased by \$0.8 million, or 20%, to \$3.3 million from \$4.1 million for the six months ended June 30, 2007. As a percentage of net sales, year-to-date general and administrative expense decreased to 7% in 2008 from 9% in 2007. The primary reason for the decrease in 2008 was a \$1.0 million reduction in legal expense due to our August 2007 favorable judgment in the U.S. District Court for the District of Minnesota in relation to a patent infringement lawsuit.

Interest and Other Income

Interest and other income for the six months ended June 30, 2008 decreased by \$0.8 million to \$0.5 million from \$1.3 million for the six months ended June 30, 2008. The primary reason for the decrease is decreased interest income of \$0.6 million in the 2008 period on cash, cash equivalents and marketable securities, resulting from lower interest rates and a slightly lower average amount of cash, cash equivalents and marketable securities invested during the six months ended June 30, 2008. Also contributing to the decrease was a \$0.4 million increase in losses related to foreign currency exchange contracts partially offset by a \$0.2 million increase in currency gains driven by an increase in gains from remeasurement of transactions at our Danish subsidiary, which has the U.S. dollar as its functional currency.

Income Taxes

Income tax expense for the six months ended June 30, 2008 decreased by \$0.1 million to \$0.4 million from \$0.5 million for the six months ended June 30, 2007. We expect that substantially all of our 2008 taxable income generated from our U.S. operations will be offset by federal net operating losses generated by us in prior years. Accordingly, we expect that any tax expense generated by our U.S. operations in 2008 will be made up primarily of federal alternative minimum tax and to a lesser extent certain state tax expense. Taxable income generated by our subsidiary in Denmark will be subject to taxation at the Danish statutory rates as we have no net operating loss carry-forwards or tax credits available to offset current or future taxable income in that jurisdiction.

Liquidity and Capital Resources

We have historically funded our operations primarily from operating cash flows, net proceeds from public and private equity offerings, bank financings and proceeds received from exercises of stock options. As of June 30, 2008, we had \$52.6 million in cash, cash equivalents and marketable securities and \$64.7 million in working capital.

Net cash provided by operations was \$4.4 million for the six months ended June 30, 2008 as compared to net cash provided by operations of \$0.3 million for the six months ended June 30, 2007. The increase is primarily due to a \$4.5 million increase in cash inflows attributable to changes in accounts receivable, coupled with a \$2.0 million increase in net income, a \$1.2 million decrease in cash outflows related to accounts payable and accrued expenses, a \$0.4 million increase in losses incurred on foreign currency forward exchange contracts and a \$0.3 million decrease in cash outflows related to prepaid expenses and other assets. This increase in cash inflows was partially offset by a \$2.8 million increase in cash outflows related to increased inventory levels, and a \$1.5 million increase in cash outflows related to other non-current assets.

Table of Contents

Net cash used in investing activities was \$1.7 million for the six months ended June 30, 2008 as compared to net cash used in investing activities of \$3.3 million for the six months ended June 30, 2007. The decrease is primarily due to a \$1.2 million decrease in our capital expenditures, coupled with a \$0.4 million decrease in our net investment in marketable securities.

Net cash used in financing activities was \$4.0 million for the six months ended June 30, 2008 as compared to net cash provided by financing activities of \$1.2 million for the six months ended June 30, 2007. The decrease is primarily due to \$4.1 million in repurchases of common stock, coupled with a \$1.1 million decrease in proceeds received from the exercise of employee stock options and the employee stock purchase plan.

On January 11, 1999, we entered into a mortgage loan in the amount of \$3.0 million. The loan term is 10 years, with a principal amortization of 20 years at a fixed rate of interest of 7.0%. Land, building and improvements secure the mortgage loan. The monthly mortgage payment is \$23,259, including interest and principal. Due to the difference in the term of the loan and amortization of the principal, a balloon payment of \$2.0 million is due on February 1, 2009. Under the mortgage loan we may prepay our outstanding loan balance subject to certain early termination charges as defined in the mortgage loan agreement.

Currently, we have a revolving loan agreement with a bank that provides for a maximum available credit of \$15.0 million that expires on December 31, 2008. We pay interest on any outstanding amounts at a rate equal to, at our option, LIBOR plus 1.5%, or the greater of either the Federal Funds Effective Rate plus 0.5% or the bank's prime interest rate. The line of credit contains two financial covenants, a Leverage Ratio and a Fixed Charge Ratio, that apply in the event that our consolidated cash, cash equivalents and marketable securities balance falls below \$25.0 million at any time. We may terminate the loan agreement prior to its full term without penalty, provided we give 30 days advance written notice to the bank. As of June 30, 2008, no borrowings were outstanding under the facility.

On July 26, 2007, our Board of Directors authorized a program to repurchase up to one million shares of our common stock. The share repurchase program is funded using our existing cash, cash equivalents, marketable securities and future cash flows. We repurchased 484,437 shares of our common stock in the six months ended June 30, 2008 under the program at a cost of approximately \$4.1 million.

On June 25, 2008, we entered into a ten-year agreement with ViaSat, Inc. to begin a global expansion of our mini-VSAT Broadband satellite communication service, including an initial purchase of three new regional satellite hubs. In addition to the purchase of these satellite hubs, as part of the coverage expansion, we plan to seek to acquire additional satellite capacity from Ku-band satellite operators, expend funds to seek regulatory approvals and permits, develop product enhancements in anticipation of the expansion and hire additional personnel. We anticipate these costs will be funded by cash, cash equivalents and marketable securities on hand, as well as anticipated future cash flows from operations.

We believe that the \$52.6 million we hold in cash, cash equivalents and marketable securities, together with our other existing working capital, will be adequate to meet planned operating and capital requirements through the foreseeable future. However, as the need or opportunity arises, we may seek to raise additional capital through public or private sales of securities or through additional debt financing. There are no assurances that we will be able to obtain any additional funding or that such funding will be available on terms acceptable to us.

Contractual Obligations and Other Commercial Commitments

As of June 30, 2008, our contractual commitments consisted of near-term inventory and fixed asset purchase order commitments, a mortgage note payable, facility and equipment leases, and royalty payments. The principal repayment of the mortgage note is based on a 20-year amortization schedule, but the term is 10 years, requiring a balloon payment of \$2.0 million on February 1, 2009. There are no loan-to-value covenants in the loan that would require early pay-down of the mortgage if the market value of the property should decline. Our purchase commitments include unconditional purchase orders for inventory, manufacturing materials and fixed assets extending out over various periods throughout 2008 and 2009. We are also obligated under multi-year facility leases that terminate at various times between 2008 and 2014.

Table of Contents

The following table summarizes our obligations under these commitments at June 30, 2008:

	Total	Payment Due by Period			More than 5 Years
		Less than 1 Year	1-3 Years (in thousands)	3-5 Years	
Contractual Obligations					
Inventory and fixed asset purchase commitments	\$ 20,506	\$ 20,506	\$	\$	\$
Facility lease obligations	2,106	363	742	764	237
Mortgage note payable	2,093	2,093			
Other operating lease obligations	498	186	226	86	
Royalty payments	313	219	94		
Total	\$ 25,516	\$ 23,367	\$ 1,062	\$ 850	\$ 237

As of June 30, 2008, we had a standby letter of credit in the amount of approximately \$0.2 million outstanding in support of a customer deposit. We had not entered into any other off-balance sheet commitments, guarantees, or standby repurchase obligations as of June 30, 2008.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Our primary market risk exposure is in the area of foreign currency exchange risk. We are exposed to currency exchange rate fluctuations related to our subsidiary operations in Denmark. Certain transactions in Denmark are made in the Danish Krone or Euro, yet reported in the U.S. dollar, the functional currency. For foreign currency exposures existing at June 30, 2008, a 10% unfavorable movement in the foreign exchange rates for our subsidiary location would not expose us to material losses in earnings or cash flows.

From time to time, we purchase foreign currency forward contracts generally having durations of no more than five months. These forward contracts are intended to offset the impact of exchange rate fluctuations on cash flows of our foreign subsidiary. Foreign currency forward contracts are recorded on the balance sheet at fair value until executed. Changes in the fair value are recognized in earnings. For the quarter ended June 30, 2008 we recorded a gain of \$16,000 related to these contracts. Such income is reflected within other income, net in our condensed consolidated statement of operations for the three months ended June 30, 2008. As of June 30, 2008, we had four Euro to U.S. dollar foreign currency forward contracts outstanding with a negative fair value of approximately \$116,000.

The primary objective of our investment activities is to preserve principal and maintain liquidity, while at the same time maximize income. We have not entered into any instruments for trading purposes. Some of the securities that we invest in may have market risk. To minimize this risk, we maintain our portfolio of cash equivalents and short-term investments in a variety of securities that can include commercial paper, United States treasuries, investment grade asset-backed corporate securities, money market mutual funds and government agency and non-government debt securities. As of June 30, 2008, a hypothetical 100 basis-point increase in interest rates would result in an approximately \$51,000 decrease in the fair value of our investments that have maturities of greater than one year. Due to the conservative nature of our investments and the relatively short duration of their maturities, we believe interest rate risk is substantially mitigated. As of June 30, 2008, 86% of the \$41.6 million classified as available-for-sale marketable securities will mature or reset within one year. Accordingly, long-term interest rate risk is not considered material. We do not invest in any financial instruments denominated in foreign currencies.

To the extent that we borrow against our variable-rate credit facility, we will be subject to interest rate risk. There were no borrowings outstanding at June 30, 2008.

ITEM 4. CONTROLS AND PROCEDURES
Evaluation of Disclosure Controls and Procedures

We maintain disclosure controls and procedures, as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934, as amended, or the Exchange Act, which are designed to ensure that information required to be disclosed in the reports we file or submit under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the Securities and Exchange Commission's rules and forms, and that such information is accumulated and communicated to our management, including our President, Chief Executive

Edgar Filing: KVH INDUSTRIES INC \DE\ - Form 10-Q

Officer and Chairman of the Board, or CEO, and Chief Financial and Accounting Officer, or CFO, as appropriate to allow timely decisions regarding required disclosure.

Table of Contents

Under the supervision and with the participation of our CEO and CFO, our management has evaluated the effectiveness of our disclosure controls and procedures as of the end of the period covered by this interim report. Based on that evaluation, our CEO and CFO concluded that our disclosure controls and procedures were effective as of June 30, 2008.

Evaluation of Changes in Internal Control over Financial Reporting

Under the supervision and with the participation of our CEO and CFO, our management has evaluated our internal control over financial reporting during the second quarter of 2008. Based on that evaluation, our CEO and CFO did not identify any change in our internal control over financial reporting that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

PART II. OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

From time to time, we are involved in litigation incidental to the conduct of our business. We are not party to any lawsuit or proceeding that, in our opinion, is likely to materially harm the Company's business, results of operations, financial conditions or cash flows.

Additionally, in the ordinary course of business, we are party to inquiries, legal proceedings and claims including, from time to time, disagreements with vendors and customers.

ITEM 1A. Risk Factors

An investment in our common stock involves a high degree of risk. You should carefully consider the following risk factors in evaluating our business. If any of these risks, or other risks not presently known to us or that we currently believe are not significant, develops into an actual event, then our business, financial condition and results of operations could be adversely affected. If that happens, the market price of our common stock could decline.

We have a history of variable operating results and may not be profitable in the future.

Although we generated net income during 2005, 2006, 2007, and in seventeen of the last twenty-two fiscal quarters, we incurred net losses of \$6.1 million in 2004 and at times our profitability has fluctuated significantly on both a sequential and comparable quarter-to-quarter basis during 2005, 2006, 2007 and in the first half of 2008. As of June 30, 2008, we had an accumulated deficit of \$4.8 million.

Shifts in our product sales mix toward our mobile communications products may continue to reduce our overall gross margins.

Our mobile communications products historically have had lower product gross margins than our guidance and stabilization products. During 2006 and 2007 and the first half of 2008, sales of our guidance and stabilization products either declined or grew at a substantially lower rate than our overall sales growth. A continuing shift in our product sales mix toward mobile communications products would likely cause lower gross margins in the future.

Table of Contents

Competition may limit our ability to sell our mobile communications products and guidance and stabilization products.

The mobile communications markets and defense navigation, guidance and stabilization markets in which we participate are very competitive, and we expect this competition to persist and intensify in the future. We may not be able to compete successfully against current and future competitors, which could impair our ability to sell our products. For example, improvements in the performance of lower cost gyros could potentially jeopardize sales of our fiber optic gyros.

In the guidance and stabilization markets, we compete primarily with Honeywell International Inc., Kearfott Guidance & Navigation Corporation, Northrop Grumman Corporation, Smiths Group plc, Tamam, and Fizoptica.

In the market for land mobile satellite TV equipment, we compete with King Controls, MotoSAT, TracStar Systems, Inc., Winegard Company, and Sirius Satellite Radio.

In the market for marine satellite TV equipment, we compete with NaviSystem Marine Electronic Systems Srl, King Controls, Sea Tel, Inc., Raymarine, and Intellian. In the market for maritime Broadband service we compete with SeaMobile, CapRock, Schlumberger, Thrane & Thrane A/S, Ship Equip, Vizada, Stratos, and Sea Tel. In the marine market for satellite communications equipment, we compete with Sea Tel, Inc., Furuno Electric Co., Ltd., Globalstar LP, Iridium Satellite LLC, EMS and Japan Radio Company.

Among the factors that may affect our ability to compete in our markets are the following:

many of our primary competitors are well-established companies that could have substantially greater financial, managerial, technical, marketing, personnel and other resources than we do;

product improvements, new product developments or price reductions by competitors may weaken customer acceptance of, and reduce demand for, our products;

new technology or market trends may disrupt or displace a need for our products; and

our competitors may have lower production costs than we do, which may enable them to compete more aggressively in offering discounts and other promotions.

The emergence of a competing small maritime VSAT antenna and complementary service or other, similar service could reduce the competitive advantage we believe we currently enjoy with our new 26 inch diameter TracPhone V7 antenna and integrated mini-VSAT Broadband service.

Our TracPhone V7 system offers customers a range of benefits due to its integrated design, hardware costs that are lower than existing maritime VSAT systems, and spread spectrum technology. We anticipate competition from companies like Sea Tel and SeaMobile, both of which have recently announced similar systems and service. We also compete against companies like Sea Tel that offer established maritime VSAT service using antennas 1 meter in diameter or larger. In addition other companies could replicate the distinguishing features of our TracPhone V7, which could potentially reduce the appeal of our solution and adversely affect sales. Moreover, consumers may choose other services such as Inmarsat Fleet or FleetBroadband for their global service coverage and potentially lower hardware costs despite higher service costs and slower data rates.

Our ability to compete in the maritime airtime services market may be impaired if we are unable to expand the coverage of our mini-VSAT Broadband service to new regions.

The TracPhone V7 and mini-VSAT Broadband service offer a range of benefits to mariners, especially in commercial markets, due to the smaller size antenna and faster, more affordable airtime. However, to support these customers, we need to expand the coverage areas of the mini-VSAT Broadband service, which is currently offered in parts of North, South, and Central America; the Caribbean; North Atlantic; and Europe. If we are unable to reach agreement with third-party satellite providers to support the mini-VSAT Broadband service and its spread spectrum technology, our ability to support vessels in the Pacific Ocean; throughout Asia; the Indian Ocean, including shipping routes to the Persian Gulf; and the Middle East will be at risk and reduce the attractiveness of the product and service to these customers.

Edgar Filing: KVH INDUSTRIES INC \DE\ - Form 10-Q

Our planned global expansion of our mini-VSAT Broadband satellite communications service will require significant expenditures, and strong performance from our TracPhone V7 and our mini-VSAT Broadband service will be necessary to meet our financial goals.

Table of Contents

We plan to continue to make significant investments in our mini-VSAT Broadband satellite communications service, including global expansion of regions in which our service is offered. On June 25, 2008, we entered into a ten-year agreement with ViaSat, Inc. to begin a planned global rollout of our mini-VSAT Broadband satellite communications service, including the purchase of new regional satellite hubs from ViaSat. In addition to the purchase of these expensive satellite hubs, as part of the coverage expansion, we plan to seek to acquire additional satellite capacity from Ku-band satellite operators, expend funds to seek regulatory approvals and permits, develop product enhancements in anticipation of the expansion and hire additional personnel. It is difficult to predict the future growth rate for our TracPhone V7 and our mini-VSAT Broadband service or the rate at which our installed base of products, and therefore airtime sales, may increase as a result of this planned service expansion. The substantial funds we expect to spend on global expansion of our satellite communications service may impact our near-term performance with no assurance that the expenditures will generate future sales or profits that meet our financial goals.

Customers for our fiber optic gyro products and TACNAV include the U.S. military and foreign governments, whose purchasing and delivery schedules and priorities are often unpredictable.

We sell our fiber optic gyro systems as well as vehicle navigation products to U.S. and foreign military and government customers, either directly or as a subcontractor to other manufacturers. These customers often use a competitive bidding process and have unique purchasing and delivery requirements, which often makes the timing of sales to these customers unpredictable. Factors that affect their purchasing and delivery decisions include:

changes in modernization plans for military equipment;

changes in tactical navigation requirements;

global conflicts impacting troop deployment;

priorities for current battlefield operations;

allocation of funding for military programs;

new military and operational doctrines that affect military equipment needs;

sales cycles that are long and difficult to predict;

shifting response time and/or delays in the approval process associated with the export licenses we must obtain prior to the international shipment of certain of our military products;

delays in military procurement schedules; and

delays in the testing and acceptance of our products, including delays resulting from changes in customer specifications.

These factors can cause substantial fluctuations in sales of fiber optic gyros and TACNAV products from period to period. For example, sales of our TACNAV products declined from 2005 to 2006 and again from 2006 to 2007, but increased slightly during the first half of 2008. Moreover, government customers and their contractors can generally cancel orders for our products for convenience or decline to exercise previously disclosed contract options. Even under firm orders with government customers, funding must usually be appropriated in the budget process in

order for the government to complete the contract. The cancellation of or failure to fund orders for our products could substantially reduce our net sales and results of operations.

Our ability to ship products to customers is occasionally contingent upon completing certain performance or technical qualifications set by customers or regulatory bodies and any failure to meet those standards could result in delayed or lost sales.

On occasion, our customers or government agencies require our products to meet stated performance or technical qualifications prior to acceptance. We often establish these qualification standards through negotiation with our customer as part of the product development or purchasing process. In other instances, government or regulatory agencies set qualification standards either for our products or for our customers products that include our products. In each case, a failure on the part of our products to qualify may result in financial penalties, shipment delays, or the cancellation of one or more orders.

Table of Contents

Sales of our fiber optic gyro systems and TACNAV products generally consist of a few large orders, and the delay or cancellation of a single order could substantially reduce our net sales.

KVH products sold to customers in the defense industry are purchased through orders that can generally range in size from several hundred thousand dollars to more than one million dollars. As a result, the delay or cancellation of a single order could materially reduce our net sales and results of operations. We continue to experience unanticipated delays in defense orders, which make our sales and operating results less predictable. Because our guidance and stabilization products typically have relatively higher product gross margins than our mobile communications products, the loss of an order for guidance and stabilization products could have a disproportionately adverse effect on our results of operations.

Only a few customers account for a substantial portion of our guidance and stabilization sales, and the loss of any of these customers could substantially reduce our net sales.

We derive a significant portion of our guidance and stabilization sales from a small number of customers, including the U.S. Government. The loss of business from any of these customers could substantially reduce our net sales and results of operations and could seriously harm our business. Since we are often awarded a contract as a subcontractor to a major defense supplier that is engaged in a competitive bidding process as prime contractor for a major weapons procurement program, our sales depend significantly on the success of the prime contractors with which we align ourselves.

The market for mobile TV products for minivans, SUVs and other passenger vehicles may continue to be slow, and our business in this market may continue to fall below expectations.

The market for live TV in automobiles is still relatively slow, which continues to make it difficult for us to predict customer demand for our low-profile automotive TracVision product accurately. Historically, sales of the automotive TracVision system have generally been below our original expectations for that market.

We believe the success of our low profile TracVision systems will depend upon consumers' assessment of whether these products meet their expectations for performance, quality, price and design. For example, the TracVision A7 is designed for use on open roads in the continental United States where there is a clear view of the transmitting satellite in the southern sky, and it may not perform satisfactorily under other conditions. Among the factors that could affect the success of the low profile TracVision systems are:

whether the sales of SUVs and other large passenger vehicles will continue to decline;

the volatility of the price of gas and whether the current trend of increasing prices will continue;

the performance, price and availability of competing or alternative products and technology relative to the automotive TracVision;

the extent to which customers prefer live TV over recorded media;

the extent to which customers perceive mobile satellite TV services as a luxury or a preferred convenience;

the extent to which TracVision gains the acceptance of the automotive OEMs;

customers' willingness to pay monthly fees for satellite television service in automobiles; and

the adoption of laws or regulations that restrict or ban television or other video technology in vehicles.

Our mobile satellite products currently depend on satellite services provided by third parties, and any disruption in those services could adversely affect sales.

Our satellite products include only the equipment necessary to receive satellite services; we do not broadcast satellite television programming or own the satellites to directly provide two-way satellite communications. We currently offer satellite television products compatible with the DIRECTV and DISH Network services in the United States, the ExpressVu service in Canada, the Sky Mexico service and various other regional services in other parts of the world.

We rely on Inmarsat for satellite communications services for our mini-M, Fleet and FleetBroadband compatible TracPhone products. SES AMERICOM and Eutelsat currently provide the satellite network to support the mini-VSAT Broadband service and our TracPhone V7.

Table of Contents

If customers become dissatisfied with the programming, pricing, service, availability or other aspects of any of these satellite services, or if any one or more of these services becomes unavailable for any reason, we could suffer a substantial decline in sales of our satellite products. There may be no alternative service provider available in a particular geographic area, and our technology may not be compatible with that of any alternative service provider that may be available. The companies that operate these services have no obligation to inform us of technological or other changes, including discontinuation of the service, which could impair the performance of our satellite products or render them inoperable. In addition, the unexpected failure of a satellite could disrupt the availability of programming and services, which could reduce the demand for, or customer satisfaction with, our products.

We rely upon spread spectrum communications technology developed by ViaSat and fielded by third-party satellite providers to permit two-way Broadband Internet via our 26 inch diameter TracPhone V7, and any disruption in the availability of this technology could adversely affect sales.

Our new mini-VSAT Broadband service relies on spread spectrum technology developed with ViaSat, Inc. for use with satellite networks controlled by SES AMERICOM and Eutelsat. Our TracPhone V7 two-way Broadband satellite terminal combines our stabilized antenna technology with ViaSat's ArcLight spread spectrum mobile Broadband technology, along with a new maritime version of ViaSat's ArcLight spread spectrum modem. The ArcLight technology is also integrated within the satellite hubs that support this service. Sales of the TracPhone V7 and our mini-VSAT Broadband service could be disrupted if these satellite providers elected not to support ViaSat's spread spectrum technology or if there were issues with the availability of the ArcLight maritime modems.

Our right to continue offering mini-VSAT Broadband service using SES AMERICOM's satellite network on an exclusive basis in certain geographic markets depends on our reaching certain annual sales targets over each of the next five years, and either party may terminate the relationship if sales in the first year of service do not meet certain minimum goals.

Under our agreement with SES AMERICOM, we cannot offer a mini-VSAT Broadband service utilizing technology that competes with SES AMERICOM's technology in areas where they offer service. If another party has or introduces technology superior to that of SES AMERICOM, our sales might suffer, and we would not be able to offer a service using that alternative technology.

Table of Contents

High fuel prices, high interest rates and environmental concerns may adversely affect sales of our mobile communications products.

Factors such as historically high fuel prices, interest rates and environmental protection laws could adversely affect sales or use of larger vehicles and vessels for which our mobile satellite communications products are designed. For example, we understand that sales of Class A recreational vehicles were down 40% through the end of May 2008 as a result of record high fuel prices, declining consumer confidence, and challenging consumer credit markets. This decline adversely affected sales of our land mobile communications products, which declined 37% from the second quarter of 2007 to the second quarter of 2008. In addition, many customers finance their purchases of these vehicles and vessels, and higher interest rates would likely reduce demand for both these vehicles and vessels and our mobile communications products. The increased cost of operating these vehicles and vessels is adversely affecting and may continue to adversely affect demand for our mobile satellite communications products.

We may continue to increase the use of international suppliers to source components for our manufacturing operations, which could disrupt our business.

Although we have historically manufactured and sourced raw materials for the majority of our products in the U.S., in order for us to compete with lower priced competitive products while also improving our profitability, we have found it desirable to source raw materials and manufactured components from foreign countries such as China and Mexico. Our increased reliance on foreign manufacturing and/or raw material supply has lengthened our supply chain and increased the risk that a disruption in that supply chain will have a material adverse affect on our operations and financial performance.

We have single dedicated manufacturing facilities for each of our mobile communications and guidance and stabilization product categories, and any significant disruption to a facility could impair our ability to deliver our products.

We currently manufacture all of our mobile communications products at our headquarters in Middletown, Rhode Island, and all of our guidance and stabilization products at our facility in Tinley Park, Illinois. Some of our production processes are complex, and we may be unable to respond rapidly to the loss of the use of either production facility. For example, our production facilities use some specialized equipment that may take time to replace if they are damaged or become unusable for any reason. In that event, shipments would be delayed, which could result in customer or dealer dissatisfaction, loss of sales and damage to our reputation. Finally, we have only a limited capability to increase our manufacturing capacity in the short term. If short-term demand for our products exceeds our manufacturing capacity, our inability to fulfill orders in a timely manner could also lead to customer or dealer dissatisfaction, loss of sales and damage to our reputation.

We depend on sole or limited source suppliers, and any disruption in supply could impair our ability to deliver our products on time or at expected cost.

We obtain many key components for our products from third-party suppliers, and in some cases we use a single or a limited number of suppliers. Any interruption in supply could impair our ability to deliver our products until we identify and qualify a new source of supply, which could take several weeks, months or longer and could increase our costs significantly. Suppliers might change or discontinue key components, which could require us to modify our product designs. For example, we have experienced changes in the chemicals used to coat our optical fiber, which changed its characteristics and thereby necessitated design modifications. In general, we do not have written long-term supply agreements with our suppliers but instead purchase components through purchase orders, which expose us to potential price increases and termination of supply without notice or recourse. We do not generally carry significant inventories of product components, and this could magnify the impact of the loss of a supplier. If we are required to use a new source of materials or components, it could also result in unexpected manufacturing difficulties and could affect product performance and reliability.

Any failure to maintain and expand our third-party distribution relationships may limit our ability to penetrate markets for mobile communications products.

We market and sell our mobile communications products through an international network of independent retailers, chain stores and distributors, as well as to manufacturers of marine vessels and recreational vehicles. If we are unable to maintain or improve our distribution relationships, it could significantly limit our sales. In addition, our distribution partners may sell products of other companies, including competing products, and are not required to purchase minimum quantities of our products.

Our net sales and operating results could decline due to general economic trends or declines in consumer spending.

Our operating performance depends significantly on general economic conditions. Net sales of our mobile communications products are largely generated by discretionary consumer spending, and demand for these products could demonstrate slower growth than we anticipate or decline as

a result of regional and global economic conditions, including the perception that the economy is or may be in a recession. Consumer spending tends to decline during recessionary periods and may decline at other times. During the first half of

Table of Contents

2008, growth in sales of our mobile satellite communications products occurred almost entirely outside the United States. Consumers may choose not to purchase our mobile communications products due to a perception that they are luxury items. As global and regional economic conditions change, including the general level of interest rates, fluctuating oil prices and demand for durable consumer products, demand for our products could be adversely affected.

If we are unable to improve our existing mobile communications and guidance and stabilization products and develop new, innovative products, our sales and market share may decline.

The markets for mobile communications products and guidance and stabilization products are each characterized by rapid technological change, frequent new product innovations, changes in customer requirements and expectations and evolving industry standards. If we fail to make innovations in our existing products and reduce the costs of our products, our market share may decline. Products using new technologies, or emerging industry standards, could render our products obsolete. If our competitors successfully introduce new or enhanced products that eliminate technological advantages our products may have in a certain market or otherwise outperform our products, or are perceived by consumers as doing so, we may be unable to compete successfully in the markets affected by these changes.

If we cannot effectively manage our growth, our business may suffer.

We have previously expanded our operations to pursue existing and potential market opportunities. This growth placed a strain on our personnel, management, financial and other resources. If we grow more rapidly than we anticipate and fail to manage that growth properly, we may incur unnecessary expenses, and the efficiency of our operations may decline. To manage any growth effectively, we must, among other things:

upgrade, expand or re-size our manufacturing facilities and capacity in a timely manner;

successfully attract, train, motivate and manage a larger number of employees for manufacturing, sales and customer support activities;

control higher inventory and working capital requirements; and

improve the efficiencies within our operating, administrative, financial and accounting systems, and our procedures and controls.

We may be unable to hire and retain the skilled personnel we need to expand our operations.

To meet our growth objectives, we must attract and retain highly skilled technical, operational, managerial and sales and marketing personnel. If we fail to attract and retain the necessary personnel, we may be unable to achieve our business objectives and may lose our competitive position, which could lead to a significant decline in net sales. We face significant competition for these skilled professionals from other companies, research and academic institutions, government entities and other organizations.

Our success depends on the services of our executive officers and key employees.

Our future success depends to a significant degree on the skills and efforts of Martin Kits van Heyningen, our co-founder, President, Chief Executive Officer, and Chairman of the Board. If we lost the services of Mr. Kits van Heyningen, our business and operating results could be seriously harmed. We also depend on the ability of our other executive officers and members of senior management to work effectively as a team. None of our senior management or other key personnel is bound by an employment agreement. The loss of one or more of our executive officers or senior management members could impair our ability to manage our business effectively.

Our international business operations expose us to a number of difficulties in coordinating our activities abroad and in dealing with multiple regulatory environments.

Historically, sales to customers outside the United States and Canada have accounted for a significant portion of our net sales. We have only one foreign sales office, which is located in Denmark, and we otherwise support our international sales from our operations in the United States. Our

limited operations in foreign countries may impair our ability to compete successfully in international markets and to meet the service and support needs of our customers in countries where we have no infrastructure. We are subject to a number of risks associated with our international business activities, which may increase our costs and require significant management attention. These risks include:

technical challenges we may face in adapting our mobile communication products to function with different satellite services and technology in use in various regions around the world;

satisfaction of international regulatory requirements and delays and costs associated with procurement of any necessary licenses or permits;

Table of Contents

restrictions on the sale of certain guidance and stabilization products to foreign military and government customers;

increased costs of providing customer support in multiple languages;

potentially adverse tax consequences, including restrictions on the repatriation of earnings;

protectionist laws and business practices that favor local competitors, which could slow our growth in international markets;

potentially longer sales cycles, which could slow our sales growth from international sales;

potentially longer accounts receivable payment cycles and difficulties in collecting accounts receivable;

losses arising from foreign currency exchange rate fluctuations; and

economic and political instability in some international markets.

Exports of certain guidance and stabilization products are subject to the International Traffic in Arms Regulations and require a license from the U.S. Department of State prior to shipment.

We must comply with the United States Export Administration Regulations and the International Traffic in Arms Regulations, or ITAR. Our products that have military or strategic applications are on the munitions list of the ITAR and require an individual validated license in order to be exported to certain jurisdictions. Any changes in export regulations may further restrict the export of our products, and we may cease to be able to procure export licenses for our products under existing regulations. The length of time required by the licensing process can vary, potentially delaying the shipment of products and the recognition of the corresponding revenue. Any restriction on the export of a significant product line or a significant amount of our products could cause a significant reduction in net sales.

Our business may suffer if we cannot protect our proprietary technology.

Our ability to compete depends significantly upon our patents, our source code and our other proprietary technology. The steps we have taken to protect our technology may be inadequate to prevent others from using what we regard as our technology to compete with us. Our patents could be challenged, invalidated or circumvented, and the rights we have under our patents could provide no competitive advantages. Existing trade secrets, copyright and trademark laws offer only limited protection. In addition, the laws of some foreign countries do not protect our proprietary technology to the same extent as the laws of the United States, which could increase the likelihood of misappropriation. Furthermore, other companies could independently develop similar or superior technology without violating our intellectual property rights. Any misappropriation of our technology or the development of competing technology could seriously harm our competitive position, which could lead to a substantial reduction in net sales.

If we resort to legal proceedings to enforce our intellectual property rights, the proceedings could be burdensome, disruptive and expensive, distract the attention of management, and there can be no assurance that we would prevail.

Also, we have delivered certain technical data and information to the U.S. government under procurement contracts, and it may have unlimited rights to use that technical data and information. There can be no assurance that the U.S. government will not authorize others to use that data and information to compete with us.

Claims by others that we infringe their intellectual property rights could harm our business and financial condition.

Our industries are characterized by the existence of a large number of patents and frequent claims and related litigation regarding patent and other intellectual property rights. We cannot be certain that our products do not and will not infringe issued patents, patents that may be issued in

the future, or other intellectual property rights of others.

We do not generally conduct exhaustive patent searches to determine whether the technology used in our products infringes patents held by third parties. In addition, product development is inherently uncertain in a rapidly evolving technological environment in which there may be numerous patent applications pending, many of which are confidential when filed, with regard to similar technologies.

From time to time we have faced claims by third parties that our products or technology infringe their patents or other intellectual property rights, and we may face similar claims in the future. Any claim of infringement could cause us to incur substantial costs defending against the claim, even if the claim is invalid, and could distract the attention of our management. If any of our products are

Table of Contents

found to violate third-party proprietary rights, we may be required to pay substantial damages. In addition, we may be required to re-engineer our products or obtain licenses from third parties to continue to offer our products. Any efforts to re-engineer our products or obtain licenses on commercially reasonable terms may not be successful, which would prevent us from selling our products, and, in any case, could substantially increase our costs and have a material adverse effect on our business, financial condition and results of operations.

Fluctuations in our quarterly net sales and results of operations could depress the market price of our common stock.

We have at times experienced significant fluctuations in our net sales and results of operations from one quarter to the next. Our future net sales and results of operations could vary significantly from quarter to quarter and year to year due to a number of factors, many of which are outside our control. Accordingly, you should not rely on quarter-to-quarter comparisons of our results of operations as an indication of future performance. It is possible that our net sales or results of operations in a quarter will fall below the expectations of securities analysts or investors. If this occurs, the market price of our common stock could fall significantly. Our results of operations in any quarter can fluctuate for many reasons, including:

changes in demand for our mobile communications products and guidance and stabilization products;

the timing and size of individual orders from military customers;

the mix of products we sell;

our ability to manufacture, test and deliver products in a timely and cost-effective manner, including the availability and timely delivery of components and subassemblies from our suppliers;

our success in winning competitions for orders;

the timing of new product introductions by us or our competitors;

expense incurred in pursuing acquisitions, such as during the third quarter of 2006;

market and competitive pricing pressures;

general economic climate; and

seasonality of pleasure boat and recreational vehicle usage.

A large portion of our expenses, including expenses for facilities, equipment, and personnel, are relatively fixed. Accordingly, if our net sales decline or do not grow as much as we anticipate, we might be unable to maintain or improve our operating margins. Any failure to achieve anticipated net sales could therefore significantly harm our operating results for a particular fiscal period.

Our tax planning strategy involves assumptions that may cause our annual provision for income tax expense or benefit to fluctuate materially. Moreover, our tax planning strategy is based upon our ability to sell our manufacturing and corporate headquarters facility located in Middletown, Rhode Island, as may be necessary.

Edgar Filing: KVH INDUSTRIES INC \DE\ - Form 10-Q

We utilize a tax planning strategy as provided for under accounting principles generally accepted in the United States as a means of supporting the realizability of certain of our deferred tax assets. The strategy involves our ability to sell our Middletown, Rhode Island headquarters facility in order to generate taxable income for the sole purpose of utilizing our U.S. net operating tax loss carry-forwards before they expire. The determination of taxable income, and therefore supportable deferred tax asset value, is based upon the difference between the property's estimated fair market value and our tax basis. Accordingly, the estimated net realizable value of our deferred tax asset is highly correlated to property values in and around the Middletown, Rhode Island area and therefore subject to changes in property value and or assumptions used in the valuation process. This fair market value subjectivity may cause us to record significant increases or decreases to our deferred tax assets during the year.

The strategy represents an action that we ordinarily would not take, but would take, if necessary, to realize an estimated \$3.3 million in U.S. deferred tax assets based on approximately \$8.5 million in estimated taxable gain from the sale of the building as of June 30, 2008.

Table of Contents

The market price of our common stock may be volatile.

Our stock price has historically been volatile. From January 1, 2004 to June 30, 2008, the trading price of our common stock ranged from \$27.75 to \$6.61. Many factors may cause the market price of our common stock to fluctuate, including:

variations in our quarterly results of operations;

the introduction of new products by us or our competitors;

changing needs of military customers;

changes in estimates of our performance or recommendations by securities analysts;

the hiring or departure of key personnel;

acquisitions or strategic alliances involving us or our competitors;

market conditions in our industries; and

the global macroeconomic and geopolitical environment.

In addition, the stock market can experience extreme price and volume fluctuations. These fluctuations are often unrelated to the operating performance of particular companies. These broad market fluctuations may adversely affect the market price of our common stock. When the market price of a company's stock drops significantly, stockholders often institute securities litigation against that company. Any such litigation could cause us to incur significant expenses defending against the claim, divert the time and attention of our management and result in significant damages.

Acquisitions may disrupt our operations or adversely affect our results.

We evaluate strategic acquisition opportunities to acquire other businesses as they arise. The expenses we incur evaluating and pursuing acquisitions, such as during the third quarter of 2006, could have a material adverse effect on our results of operations. If we acquire a business, we may be unable to manage it profitably or successfully integrate its operations with our own. Moreover, we may be unable to realize the financial, operational and other benefits we anticipate from any acquisition. Competition for acquisition opportunities could increase the price we pay for businesses we acquire and could reduce the number of potential acquisition targets. Further, our approach to acquisitions may involve a number of special financial and business risks, such as:

charges related to any potential acquisition from which we may withdraw;

diversion of our management's time, attention, and resources;

loss of key acquired personnel;

increased costs to improve or coordinate managerial, operational, financial, and administrative systems including compliance with the Sarbanes-Oxley Act of 2002;

dilutive issuances of equity securities;

the assumption of legal liabilities; and

amortization of acquired intangible assets.

Our charter and by-laws and Delaware law may deter takeovers.

Our certificate of incorporation, by-laws and Delaware law contain provisions that could have an anti-takeover effect and discourage, delay or prevent a change in control or an acquisition that many stockholders may find attractive. These provisions may also discourage proxy contests and make it more difficult for our stockholders to take some corporate actions, including the election of directors. These provisions relate to:

the ability of our Board of Directors to issue preferred stock, and determine its terms, without a stockholder vote;

the classification of our Board of Directors, which effectively prevents stockholders from electing a majority of the directors at any one annual meeting of stockholders;

Table of Contents

the limitation that directors may be removed only for cause by the affirmative vote of the holders of two-thirds of our shares of capital stock entitled to vote;

the prohibition against stockholder actions by written consent;

the inability of stockholders to call a special meeting of stockholders; and

advance notice requirements for stockholder proposals and director nominations.

ITEM 2. UNREGISTERED SALES OF EQUITY SECURITIES AND USE OF PROCEEDS

On July 26, 2007, the Company's Board of Directors authorized a program to repurchase up to one million shares of the Company's common stock. The repurchase program is funded using the Company's existing cash, cash equivalents, marketable securities and future cash flows. Under the repurchase program, the Company, at management's discretion, may repurchase shares on the open market from time to time, in privately negotiated transactions or block transactions, or through an accelerated repurchase agreement. The timing of such repurchases depends on availability of shares, price, market conditions, alternative uses of capital, and applicable regulatory requirements. The program may be modified, suspended or terminated at any time without prior notice. The repurchase program has no expiration date. There were no other repurchase programs outstanding during the three months ended June 30, 2008, and no repurchase programs expired during the period.

Table of Contents

The Company repurchased 167,219 shares of its common stock in the three-month period ended June 30, 2008 under the program at a cost of approximately \$1.5 million. The following table summarizes the repurchases by the Company of its common stock during the three months ended June 30, 2008:

Period		Total Number of Shares Purchased	Average Price Paid Per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Maximum Number of Shares That May Yet be Purchased Under the Plans or Programs
April 1, 2008	April 30, 2008	17,200	9.83	17,200	424,582
May 1, 2008	May 31, 2008	73,940	9.54	73,940	350,642
June 1, 2008	June 30, 2008	76,079	8.76	76,079	274,563
Total		167,219	\$ 9.21	167,219	

ITEM 4. SUBMISSION OF MATTERS TO A VOTE OF SECURITY HOLDERS

On May 21, 2008, we held our annual meeting of stockholders. Our stockholders elected Martin A. Kits van Heyningen, Robert W.B. Kits van Heyningen and Bruce J. Ryan to serve as Class III directors for three-year terms. In addition, the terms of office of our other directors, Mark S. Ain, Stanley K. Honey and Charles R. Trimble, continued after our annual meeting of stockholders.

The votes cast to elect the directors were:

	Votes In Favor	Votes Withheld	Broker Non-Votes
Martin A. Kits van Heyningen	11,633,314	1,537,875	
Robert W.B. Kits van Heyningen	12,718,362	452,827	
Bruce J. Ryan	11,341,368	1,829,821	

In addition, our stockholders voted to approve an amendment to the KVH Industries, Inc. 2006 Stock Incentive Plan to increase the number of shares of our common stock available under the plan by 1,000,000 to 2,000,000 and to approve an amendment to the KVH Industries, Inc. 1996 Employee Stock Purchase Plan to increase the number of shares of our common stock available under the plan by 50,000 to 500,000. The votes cast on these proposals were:

	Votes In Favor	Votes Against	Abstentions	Broker Non-Votes
To approve the amendment of the 2006 Stock Incentive Plan	6,628,092	2,038,107	179,324	4,325,666
To approve the amendment of the 1996 Employee Stock Purchase Plan	8,272,017	397,161	176,345	4,325,666
